ATENŢIE
(RO)

ДАННОЕ РУКОВОДСТВО ПО ОБСЛУЖИВАНИЮ ПРЕДОСТАВЛЯЕТСЯ ТОЛЬКО НА АНГЛИЙСКОМ ЯЗЫКЕ.

- ЕСЛИ СЕРВИСНОМУ ПЕРСОНАЛУ КЛИЕНТА НЕОБХОДИМО РУКОВОДСТВО НЕ НА АНГЛИЙСКОМ ЯЗЫКЕ, КЛИЕНТУ СЛЕДУЕТ САМОСТОЯТЕЛЬНО ОБЕСПЕЧИТЬ ПЕРЕВОД.
- ПЕРЕД ОБСЛУЖИВАНИЕМ ОБОРУДОВАНИЯ ОБЯЗАТЕЛЬНО ОБРАТИТЕСЬ К ДАННОМУ РУКОВОДСТВУ И ПОЙМИТЕ ИЗЛОЖЕННЫЕ В НЕМ СВЕДЕНИЯ.
- НЕСОБЛЮДЕНИЕ УКАЗАННЫХ ТРЕБОВАНИЙ МОЖЕТ ПРИВЕСТИ К ТОМУ, ЧТО СПЕЦИАЛИСТ ПО ТЕХОБСЛУЖИВАНИЮ, ОПЕРАТОР ИЛИ ПАЦИЕНТ ПОЛУЧАТ УДАР ЗЛЕКТРИЧЕСКИМ ТОКОМ, МЕХАНИЧЕСКУЮ ТРАВМУ ИЛИ ДРУГОЕ ПОВРЕЖДЕНИЕ.

ОСТОРОЖНО!
(RU)

ТОВА СЕРВИЗНО РЪКОВОДСТВО Е НАЛИЧНО САМО НА АНГЛИЙСКИ ЕЗИК.

- АКО ДОСТАВЧИКЪТ НА СЕРВИЗНИ УСЛУГИ НА КЛИЕНТ СЕ НУЖДАЕ ОТ ЕЗИК, РАЗЛИЧЕН ОТ АНГЛИЙСКИ, ЗАДЪЛЖЕНИЕ НА КЛИЕНТА Е ДА ПРЕДОСТАВИ ПРЕВОДАЧЕСКА УСЛУГА.
- НЕ СЕ ОПИТВАЙТЕ ДА ИЗВЪРШВАТЕ СЕРВИЗНО ОБСЛУЖВАНЕ НА ТОВА ОБОРУДВАНЕ, ОСВЕН ВСЛУЧАЙ, ЧЕ СЕРВИЗНОТО РЪКОВОДСТВО Е ПРОЧЕТЕНО И СЕ РАЗБИРА.
- НЕСПАЗВАНЕТО НА ТОВА ПРЕДУПРЕЖДЕНИЕ МОЖЕ ДА ДОВЕДЕ ДО НАРАНЯВАНЕ НА ДОСТАВЧИКА НА СЕРВИЗНИ УСЛУГИ, НА ОПЕРАТОРА ИЛИ ПАЦИЕНТА ВСПЕДСТВИЕНА ТОКОВ УДАР, МЕХАНИЧНИ ИЛИ ДРУГИ РИСКОВЕ.

ПРЕДУПРЕЖДЕНИЕ
(BG)

OVAJ PRIRUČNIK ZA SERVISIRANJE DOSTUPAN JE SAMO NA ENGLISKOM JEZIKU.

- АКО КЛИЈЕНТОВ СЕРВИСЕР ЗАХТЕВА ЈЕЗИК КОЈИ НИЈЕ ЕНГЛЕСКИ, ОДГОВОРНОСТ ЈЕ НА КЛИЈЕНТУ ДА ПРУЖИ УСЛУГЕ ПРЕВОЂЕНЈА.
- НЕМОЈТЕ ПОКУШАВАТИ ДА СЕРВИСИРАТЕ ОПРЕМУ АКО НИСТЕ ПРОЧИТАЛИ И РАЗУМЕЛИ ПРИРУЧНИК ЗА СЕРВИСИРАЊЕ.
- АКО НЕ ПОШТУЈЕТЕ ОВО УПОЗОРЕЊЕ, МОЖЕ ДОЋИ ДО ПОВРЕЂИВАЊА СЕРВИСЕРА, ОПЕРАТЕРА ИЛИ ПАЦИЈЕНТА УЗРОКОВАНОГ ЕЛЕКТРИЧНИМ УДАРОМ, МЕХАНИЧКИМ И ДРУГИМ ОПАСНОСТИМА.

УПОЗОРЕЊЕ
(SR)

TA SERVISNI PRIROČNIK JE NA VOLJO SAMO V ANGLEŠČINI.

- ČE PONUDNIK SERVISNIH STORITEV ZA STRANKO POTREBUJE NAVODILA V DRUGEM JEZIKU, JE ZA PREVOD ODGOVORNA STRANKA SAMA.
- NE POSKUŠAJTE SERVISIRATI OPREME, NE DA BI PREJ PREBRALI IN RAZUMELI SERVISNI PRIROČNIK.
- ČE TEGA OPOZORILA NE UPOŠTEVATE, OBSTAJA NEVARNOST ELEKTRIČNEGA UDARA, MEHANSKIH ALI DRUGIH NEVARNOSTI IN POSLEDIČNIH POŠKODB PONUDNIKA SERVISNIH STORITEV, UPORABNIKA OPREME ALI PACIENTA.

OPOZORILO
(SL)

OVAJ SERVISNI PRIRUČNIK DOSTUPAN JE SAMO NA ENGLJSKOM JEZIKU.

- AKO KLIJENTOV SERVISER ZAHTIJEVA JEZIK KOJI NIJE ENGLJSKI, ODGOVORNOST KLIJENTA JE PRUŽITI USLUGE PREVOĐENJA.
- NEMOJTE POKUŠAVATI SERVISIRATI OPREMU AKO NISTE PROČITALI I RAZUMJELI SERVISNI PRIRUČNIK.
- AKO NE POŠTUJETE OVO UPOZORENJE, MOŽE DOĆI DO OZLJEDE SERVISERA, OPERATERA ILI PACIJENTA PROUZROČENE STRUJNIM UDAROM, MEHANIČKIM I DRUGIM OPASNOSTIMA.

UPOZORENJE
(HR)

TÁTO SERVISNÁ PRÍRUČKA JE K DISPOZÍCII LEN V ANGLIČTINE.

- AK ZÁKAZNÍKOV POSKYTOVATEĽ SLUŽIEB VYŽADUJE INÝ JAZYK AKO ANGLIČTINU, POSKYTNUTIE PREKLADATEĽSKÝCH SLUŽIEB JE ZODPOVEDNOSŤOU ZÁKAZNÍKA.
- NEPOKÚŠAJTE SA VYKONÁVAŤ SERVIS ZARIADENIA SKÔR, AKO SI NEPREČÍTATE SERVISNÚ PRÍRUČKU A NEPOROZUMIETE JEJ.
- ZANEDBANIE TOHTO UPOZORNENIA MÔŽE VYÚSTITĚ DO ZRANENIA POSKYTOVATEĽA SLUŽIEB, OBSLUHUJÚCEJ OSOBY ALEBO PACIENTA ELEKTRICKÝM PRÚDOM, PRÍPADNE DO MECHANICKÉHO ALEBO INÉHO NEBEZPEČENSTVA.

UPOZORNENIE
(SK)

DEN HÄR SERVICEHANDBOKEN FINNS BARA TILLGÄNGLIG PÅ ENGELSKA.

- OM EN KUNDS SERVICETEKNIKER HAR BEHOV AV ETT ANNAT SPRÅK ÄN ENGELSKA ANSVARAR KUNDEN FÖR ATT TILLHANDAHÅLLA ÖVERSÄTTNINGSTJÄNSTER.
- FÖRSÖK INTE UTFÖRA SERVICE PÅ UTRUSTNINGEN OM DU INTE HAR LÄST OCH FÖRSTÅR DEN HÄR SERVICEHANDBOKEN.
- OM DU INTE TAR HÄNSYN TILL DEN HÄR VARNINGEN KAN DET RESULTERA I SKADOR PÅ SERVICETEKNIKERN, OPERATÖREN ELLER PATIENTEN TILL FÖLJD AV ELEKTRISKA STÖTAR, MEKANISKA FAROR ELLER ANDRA FAROR.

Damage in Transportation

All packages should be closely examined at time of delivery. If damage is apparent, write "Damage In Shipment" on ALL copies of the freight or express bill BEFORE delivery is accepted or "signed for" by a GE representative or hospital receiving agent. Whether noted or concealed, damage MUST be reported to the carrier immediately upon discovery, or in any event, within 14 days after receipt, and the contents and containers held for inspection by the carrier. A transportation company will not pay a claim for damage if an inspection is not requested within this 14 day period.

Certified Electrical Contractor Statement - For USA Only

All electrical Installations that are preliminary to positioning of the equipment at the site prepared for the equipment shall be performed by licensed electrical contractors. Other connections between pieces of electrical equipment, calibrations and testing shall be performed by qualified GE personnel. In performing all electrical work on these products, GE will use its own specially trained field engineers. All of GE's electrical work on these products will comply with the requirements of the applicable electrical codes.

The purchaser of GE equipment shall only utilize qualified personnel (i.e., GE's field engineers, personnel of third-party service companies with equivalent training, or licensed electricians) to perform electrical servicing on the equipment.

Omission and Errors

If there are any omissions, errors or suggestions for improving this documentation, contact the GE Global Documentation Group with specific information listing the system type, manual title, part number, revision number, page number and suggestion details.

**Mail the
information to:**

GE Medical Systems (China) Co., Ltd.
No. 19 Changjiang Road
Wuxi National Hi-Tech Dev. Zone
Jiangsu
P.R.China 214028

GE employees should use TrackWise to report service documentation issues.

These issues will then be in the internal problem reporting tool and communicated to the writer.

Service Safety Considerations

DANGER

DANGEROUS VOLTAGES, CAPABLE OF CAUSING DEATH, ARE PRESENT IN THIS EQUIPMENT. USE EXTREME CAUTION WHEN HANDLING, TESTING AND ADJUSTING.

^w **WARNING**

Use all Personal Protection Equipment (PPE) such as gloves, safety shoes, safety glasses, and kneeling pad, to reduce the risk of injury.

For a complete review of all safety requirements, refer to Chapter 1 in the Service Manual.

Legal Notes

Chapter 1

Introduction

This chapter describes important issues related to safely servicing the ultrasound system and Docking Station/Cart. The service provider must read and understand all the information presented here before installing or servicing the units.

Contents in This Chapter

- ‘Overview’ on *page 1-2*
- ‘Manual Overview’ on *page 1-3*
- ‘Important Conventions’ on *page 1-6*
- ‘Product Icons’ on *page 1-10*
- ‘Safety Considerations’ on *page 1-15*
- ‘Dangerous Procedure Warnings’ on *page 1-23*
- ‘Lockout/Tagout (LOTO) Requirements’ on *page 1-24*
- ‘Returning Probes and Repair Parts’ on *page 1-25*
- ‘EMC, EMI and ESD’ on *page 1-26*
- ‘Customer Assistance’ on *page 1-28*

Manual Overview

This manual provides installation and service information for the Venue 50 Ultrasound system and Docking Station/Cart. It is divided in ten chapters as shown below.

Contents in This Manual

The manual is divided into ten chapters.

In the beginning of the manual, before Chapter 1, you will find the *Revision overview*, the *Important precautions* including *Translation policy*, *Damage in transportation*, *Certified electrical contractor statement*, *Omission & errors*, *Service safety considerations* and *Legal notes*, and the *Table of Contents (TOC)*.

An Index has been included after Chapter 10.

Table 1-1: Contents in this manual

| Chapter number | Chapter title | Description |
|----------------|--|--|
| 1. | 'Introduction' | Contains a content summary and warnings. |
| 2. | 'Site Preparations' | Contains pre-setup requirements for the Venue 50. |
| 3. | 'System Setup' | Contains setup procedure with procedure checklist. |
| 4. | 'General Procedures and Functional Checks' | Contains functional checks that must be performed as part of the installation, or as required during servicing and periodic maintenance. |
| 5. | 'Components and Functions (Theory)' | Contains block diagrams and functional explanations of the electronics. |
| 6. | 'Service Adjustments' | Contains instructions on how to make any available adjustments to the Venue 50. |
| 7. | 'Troubleshooting' | Provides procedures for running diagnostic or related routines for the Venue 50. |

Table 1-1: Contents in this manual (Continued)

| Chapter number | Chapter title | Description |
|----------------|--------------------------|---|
| 8. | 'Replacement Procedures' | Provides disassembly procedures and reassembly procedures for all changeable FRU. |
| 9. | 'Renewal Parts' | Contains a complete list of replacement parts for Venue 50. |
| 10. | 'Care and Maintenance' | Provides periodic maintenance procedures for Venue 50. |
| N/A | Index | A quick way to the topic you're looking for. |

Typical Users of the Proprietary Service Manual

- GEHC Service Personnel (setup, maintenance, etc.)
- GEHC Online Center Personnel
- Licensed Hospital's Service Providers

Venue 50 models covered by this manual

Table 1-2: Venue 50 Model Designations

| Part Number | Description |
|-------------|----------------------------|
| 5452256 | Venue 50 Console |
| 5448623 | Venue 50 Console with film |
| 5560851 | Venue 50 Korean Console |
| 5561656 | Venue 50 China Console |

NOTE: *When not otherwise specified, the contents of this manual applies to all Venue 50 models.*

Important Conventions

Conventions used in book

Important conventions, used in this document, are described next.

Model designations

This manual covers the Venue 50 Ultrasound systems listed in: 'Venue 50 models covered by this manual' on *page 1-5*.

Icons

Pictures, or icons, are used wherever they will reinforce the printed message. The icons, labels, and conventions used on the product and in the service information are described in this chapter.

Safety precaution messages

Various levels of safety precaution messages may be found on the equipment and in the service information. The different levels of concern are identified by a flag word that precedes the precautionary message. Known or potential hazards to personnel are labeled in one of three ways:

- DANGER
- WARNING
- CAUTION

Danger is used to indicate the presence of a hazard that will cause severe personal injury or death if the instructions are ignored.

Warning is used to indicate the presence of a hazard that can cause severe personal injury and property damage if instructions are ignored.

Caution is used to indicate the presence of a hazard that will or can cause minor personal injury and property damage if instructions are ignored. Equipment damage possible.

NOTE: Notes are used to provide important information about an item or a procedure.

NOTE: Be sure to read the notes; the information contained in a note can often save you time or effort.

Standard hazard icons

Important information will always be preceded by either the exclamation point (!) contained within a triangle, or the symbols for “Danger”, “Warning” or “Caution”, as seen throughout this chapter. In addition to text, several different graphical icons (symbols) may be used to make you aware of specific types of hazards that could possibly cause harm. Even if a symbol isn’t used in this manual, it may be included for your reference.

Table 1-3: Standard hazard icons

| | |
|---|------------|
|  | ELECTRICAL |
|  | MECHANICAL |
|  | RADIATION |
|  | LASER |
|  | HEAT |
|  | PINCH |

NOTE: *Even if a symbol isn’t used on the product or in this manual, it may be included for your reference.*

Standard Icons that indicate that a special procedure is to be used

Some other icons make you aware of specific procedures that should be followed.

Table 1-4: Standard Icons that indicates that a special procedure is to be used

| | | |
|---|---|--|
| Avoid Static Electricity | Tag and Lock Out | Wear Eye Protection |
|  |  |  |
| Hand Protection | Foot Protection | Wear Eye Protection |
|  |  |  |

Be sure to read the notes; the information contained in a note can often save you time or effort.

Product Icons

The following table describes the purpose and location of safety labels and other important information provided on the equipment.

Label Icon Description

The following table describes the purpose and location of safety labels and other important information provided on the equipment.

Table 1-5: Product Icons

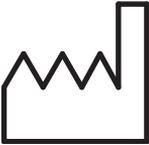

| Label/Icon | Purpose/Meaning | Location |
|--|--|--------------|
| Identification and Rating Plate  | Manufacture's name and address | Rating Plate |
| Identification and Rating Plate  | Date of manufacture | Rating Plate |
|  | Serial number | Rating Plate |
|  | Catalog Number | Rating Plate |
|  | Direct Current: For products to be powered from a DC supply | Rating Plate |

Table 1-5: Product Icons (Continued)

| Label/Icon | Purpose/Meaning | Location |
|---|--|----------------------------------|
| INPUT | Input | Rating Plate |
| Only for use with NZDOCK or NZCART | Only for use with NZDOCK or NZCART | Rating Plate |
| DESC. | Description | Rating Plate |
| Type/Class Label | Used to indicate the degree of safety or protection. | Rating Plate |
| IP Code (IPX8) IPX8: MKF 2 1S/1S-MED HID GP26 | Indicates the degree of protection provided by the enclosure per IEC60 529. IPX8 can be used in an operating room environment. | Footswitch |
|  | Authorized European Representative address. | |
|  | United States only Prescription Requirement label. | |
|  | Type BF Applied Part (man in the box) symbol is in accordance with IEC 878-02-03. | Probe connector and Rating plate |
|  | General Warning. | Various |
|  | "CAUTION" - Dangerous voltage" (the lightning flash with arrowhead) is used to indicate electric shock hazards. | Various |

Table 1-5: Product Icons (Continued)

| Label/Icon | Purpose/Meaning | Location |
|---|--|---|
|  | <p>“ON” indicates the power on position of the power switch. CAUTION: This Power Switch DOES NOT ISOLATE Mains Supply.</p> | <p>See the Console Overview section for location information.</p> |
|  | <p>“Protective Earth” indicates the protective earth (grounding) terminal.</p> | <ul style="list-style-type: none"> • Inside of AC adapter with docking station • docking cart |
|  | <p>“Equipotentiality” indicates the terminal to be used for connecting equipotential conductors when interconnecting (grounding) with other equipment. Connection of additional protective earth conductors or potential equalization conductors is not necessary in most cases and is only recommended for situations involving multiple equipment in a high-risk patient environment to provide assurance that all equipment is at the same potential and operates within acceptable leakage current limits. An example of a high-risk patient would be a special procedure where the patient has an accessible conductive path to the heart such as exposed cardiac pacing leads. IEC60417-5021</p> | <p>Docking Cart</p> |
|  | <p>NRTL Listing and Certification Mark is used to designate conformance to nationally recognized product safety standards. The Mark bears the name and/ or logo of the testing laboratory, product category, safety standard to which conformity is assessed and a control number.</p> | <p>Rating Plate</p> |
|  | <p>“Consult accompanying documents” is intended to alert the user to refer to the operator manual or other instructions when complete information cannot be provided on the label.</p> | <p>Various</p> |
|  | <p>This symbol indicates that waste electrical and electronic equipment must not be disposed of as unsorted municipal waste and must be collected separately. Please contact an authorized representative of the manufacturer for information concerning the decommissioning of your equipment.</p> | <p>Rating Plate</p> |

Table 1-5: Product Icons (Continued)

| Label/Icon | Purpose/Meaning | Location |
|---|---|--|
|  | <p>The separate collection symbol is affixed to a battery, or its packaging, to advise you that the battery must be recycled or disposed of in accordance with local or country laws. The letters below the separate collection symbol indicate whether certain elements (Pb=Lead, Cd=Cadmium, Hg=Mercury) are contained in the battery. To minimize potential effects on the environment and human health, it is important that all marked batteries that you remove from the product are properly recycled or disposed. For information on how the battery may be safely removed from the device, please consult the service manual or equipment instructions. Information on the potential effects on the environment and human health of the substances used in batteries is available at this url: http://www.gehealthcare.com/euen/weee-recycling/index.html</p> | <p>Battery Pack if contains Pb/Cd/Hg</p> |
|  | <p>No hazardous substance, above the maximum concentration value, is present. Maximum concentration values for electronic information products, as set by the People's Republic of China Electronic Industry Standard SJ/T11364-2006, include the hazardous substances of lead, mercury, hexavalent chromium, cadmium, polybrominated biphenyl (PBB), and polybrominated diphenyl ether (PBDE).</p> | <p>Bottom</p> |
|  | <p>Indicates the presence of hazardous substance(s) above the maximum concentration value. Maximum concentration values for electronic information products, as set by the People's Republic of China Electronic Industry Standard SJ/T11364-2006, include the hazardous substances of lead, mercury, hexavalent chromium, cadmium, polybrominated biphenyl (PBB), and polybrominated diphenyl ether (PBDE). "10" indicates the number of years during which the hazardous substance(s) will not leak or mutate so that the use of this product will not result in any severe environmental pollution, bodily injury, or damage to any assets.</p> | <p>Rating Plate</p> |

Table 1-5: Product Icons (Continued)

| Label/Icon | Purpose/Meaning | Location |
|--|---|---|
|  | <p>GOST symbol: Russia Regulatory Country Clearance.</p> | <p>Bottom Note: Only after Russian regulatory registration is complete, this label will be located on the console rating plate.</p> |
| <p>Segurança</p>  | <p>INMETRO Certification: TUV Rheinland Brazil</p> | <p>Back of the system Note: Only after Brazilian regulatory registration is complete, this label will be located on the console rating plate.</p> |
|  | <p>Do not put anything weighed over 5kg on the shelf.</p> | <p>Printer shelf of Docking Cart</p> |
|  | <p>Do not push the system</p> | <p>Back of Docking Cart and Rating Plate</p> |
|  | <p>Do not step on the system</p> | <p>Base chassis covers of Docking Cart</p> |

Labels Locations

It is important to refer to the current revision of the Ultrasound system's User Manual for a full list of product labels prior to servicing the system.

Safety Considerations

Contents in this section

- 'Introduction' on *page 1-15*
- 'Human Safety' on *page 1-16*
- 'Mechanical safety' on *page 1-18*
- 'Electrical safety' on *page 1-20*
- 'Battery Safety' on *page 1-21*

Introduction

The following safety precautions must be observed during all phases of operation, service and repair of this equipment. Failure to comply with these precautions or with specific warnings elsewhere in this manual, violates safety standards of design, manufacture and intended use of the equipment.

Human Safety

- Operating personnel must not remove the system covers.
- Servicing should be performed by authorized personnel only.

Only personnel who have participated in a Venue 50 Training Seminar are authorized to service the equipment.

 DANGEROUS VOLTAGES, CAPABLE OF CAUSING DEATH, ARE PRESENT IN THIS EQUIPMENT. USE EXTREME CAUTION WHEN HANDLING, TESTING AND ADJUSTING.

If the covers are removed from an operating Venue 50, some metal surfaces may be warm enough to pose a potential heat hazard if touched, even while in shutdown mode.

Explosion Warning

DO NOT operate the equipment in an explosive atmosphere. Operation of any electrical equipment in such an environment constitutes a definite safety hazard.

DO NOT substitute parts or modify equipment

Because of the danger of introducing additional hazards, ONLY install GE approved parts. DO NOT perform any unauthorized modification of the equipment.

Risk of electrical shock, Ultrasound system must be turned off and disconnected from power source. Cord must be controlled at all times.

Wait for at least 20 seconds for capacitors to discharge as there are no test points to verify isolation.

Ultrasound system components may be energized. Always refer to the Ultrasound system's Proprietary Service Manual for LOTO warnings and cautions

Human Safety (continued)

Use all Personal Protection Equipment (PPE) such as gloves, safety shoes, safety glasses, and kneeling pad, to reduce the risk of injury.

Beware of possible sharp edges on all mechanical parts. If sharp edges are encountered, the appropriate PPE should be used to reduce the risk of injury.

Wear all PPE including gloves as indicated in the chemical MSDS.

Mechanical safety

While the software install procedure is designed to preserve data, you should save any patient data, images, system setups to removable media or hardcopy before doing a software upgrade.

Ultrasound probes are highly sensitive medical instruments that can easily be damaged by improper handling. Use care when handling and protect from damage when not in use. Do not use a damaged or defective probe. Failure to follow these precautions can result in serious injury and equipment damage.

Never use a probe that has fallen to the floor. Even if it looks OK, it may be damaged.

Do not move Docking Cart with big incline angle.

When using Docking Cart, avoid water and blood enter into Docking Cart.

Put peripherals in correct position to avoid Docking Cart overload.

Mechanical safety (continued)

NOTE: *Special care should be taken when transporting the unit in a vehicle:*

- *Before transporting, place the system in its special storage case.*
- *Ensure that the system is firmly secured while inside the vehicle.*
- Secure system with straps or as directed otherwise to prevent motion during transport.
- Prevent vibration damage by driving cautiously. Avoid unpaved roads, excessive speeds, and erratic stops or starts.

If the Venue 50 system is on a docking cart, please take special care of the following:

Make sure the Venue 50 be fixed well to avoid the console falling down when moving Docking Cart.

When the Venue 50 is raised for a repair or moved along any incline, use external caution since it may become unstable and tip over.

Venue 50 system weighs 4.0kg or more, depending on installed peripherals, when ready for use. Care must be used when moving it or replacing its parts.

ALWAYS:

- Use the handle to move the Ultrasound system.
- Do not let the Ultrasound system strike walls or door frame.

Electrical safety

Safe practices

Follow these guidelines to minimize shock hazards whenever you are using the Ultrasound system:

- To minimize shock hazard, the equipment chassis must be connected to an electrical ground.
- The Ultrasound system is equipped with a three-conductor AC power cable. This must be plugged into an approved electrical outlet with safety ground.
- The power outlet used for this equipment should not be shared with other types of equipment.
- Both the system power cable and the power connector must meet international electrical standards

Connecting a Venue 50 to the wrong voltage level will most likely destroy it.

Probes

Follow these guidelines before connecting a probe to the Ultrasound system:

- Inspect the probe prior to each use for damage or degradation to the:
 - housing
 - cable strain relief
 - lens
 - seal
 - connector pins
 - locking mechanism
- Do not use a damaged or defective probe.
- Never immerse the probe connector or adapter into any liquid.

Peripherals

Refer to the Patient Safety Environment section of the User's Manual for peripheral isolation information.

Battery Safety

To avoid the risk of injury, follow the warning and cautions to make sure that the battery does not burst, ignite, or generate heat of fumes.

- The battery has a safety device. Do not disassemble or alter the battery.
- Charge and discharge the batteries only when the ambient temperature is between 3°C and 40°C (37°F and 104°F).
- DO NOT short-circuit the battery by directly connecting the negative terminals with metal objects.
- DO NOT heat the battery or discard it in a fire.
- DO NOT expose the battery to temperature over 50°C (122°F). Keep it away from fire and other heat sources.
- DO NOT charge the battery near a heat source, such as a fire or heater.
- DO NOT leave the battery in direct sunlight.
- DO NOT pierce the battery with a sharp object, hit it, or step on it.
- DO NOT use a damaged battery.
- DO NOT solder a battery.
- DO NOT connect the battery to an electrical power outlet.

If the Venue 50 is not being used on a monthly basis, the battery needs to be removed during the lengthy non-use period.

Battery Safety (continued)

To avoid the battery bursting, igniting, or fumes from the battery causing equipment damage, observe the following precautions:

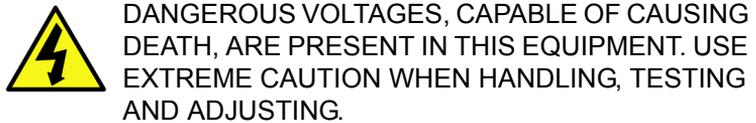

- DO NOT immerse the battery in water or allow it to get wet.
- DO NOT put the battery into a microwave oven or pressurized container.
- If the battery leaks or emits an odor, remove it from all possible flammable sources.
- If the battery emits an odor or heat, is deformed or discolored, or in a way appears abnormal during use, recharging or storage, immediately remove it and stop using it. If you have any questions about the battery, consult GE or your local representative.
- Short term (less than one month) storage of battery pack:
 - Store the battery in a temperature range between -5°C (23°F) and 50°C (122°F).

- Long term (3 months or more) storage of battery pack:
 - Store the battery in a temperature range between -5°C (23°F) and 50°C (122°F)
 - Upon receipt of the Venue 50 and before first time usage, it is highly recommended that the customer performs one full discharge/charge cycle. If the battery has not been used for 2 months or more, the customer is recommended to perform one full discharge/charge cycle. It is also recommended to store the battery in a shady and cool area with FCC (full current capacity).
 - One Full Discharge/Charge Cycle Process:
 1. Full discharge of battery to let the Venue 50 automatically shut down.
 2. Charge the Venue 50 to 100% FCC (full current capacity).
 3. Discharge of Venue 50 for complete shut down (takes one hour for discharge).
 - When storing batteries for more than 6 months, charge the batteries at least once every 6 months to prevent leakage and deterioration in performance.
- Use only GE approved batteries.

Dangerous Procedure Warnings

Warnings, such as the example below, precede potentially dangerous procedures throughout this manual. Instructions contained in the warnings must be followed.

If the covers are removed from an operating Venue 50, some metal surfaces may be warm enough to pose a potential heat hazard if touched, even while in shutdown mode.

Explosion Warning

DO NOT operate the equipment in an explosive atmosphere. Operation of any electrical equipment in such an environment constitutes a definite safety hazard.

Shut down forcedly or remove ACDC plug may cause the damage of the system files.

Lockout/Tagout (LOTO) Requirements

Follow Lockout/Tagout requirements by ensuring you are in total control of the AC power plug at all times during the service process.

To apply Lockout/Tagout (LOTO):

1. Plan and prepare for shutdown.
2. Shutdown the equipment.
3. Isolate the equipment.
4. Remove/disconnect the battery, if present.
5. Apply Lockout/Tagout Devices.
6. Control all stored and residual energy.
7. Verify isolation.

All potentially hazardous stored or residual energy is relieved.

Energy Control and Power Lockout for Venue 50.

When servicing parts of the Ultrasound system where there is exposure to voltage greater than 30 volts:

1. Follow LOCK OUT/TAG OUT procedures.
2. Turn off the breaker.
3. Unplug the Ultrasound system.
4. Maintain control of the Ultrasound system power plug.
5. Wait for at least 30 seconds for capacitors to discharge as there are no test points to verify isolation.
6. Remove/disconnect the battery, if present.

Ultrasound System components may be energized.

Returning Probes and Repair Parts

Equipment being returned must be clean and free of blood and other infectious substances. GE policy states that body fluids must be properly removed from any part or equipment prior to shipment. GE employees, as well as customers, are responsible for ensuring that parts/equipment have been properly decontaminated prior to shipment. Under no circumstance should a part or equipment with visible body fluids be taken or shipped from a clinic or site (for example, body coils or an ultrasound probe).

The purpose of the regulation is to protect employees in the transportation industry, as well as the people who will receive or open this package.

NOTE: The US Department of Transportation (DOT) has ruled that “items that were saturated and/or dripping with human blood that are now caked with dried blood; or which were used or intended for use in patient care” are “regulated medical waste” for transportation purposes and must be transported as a hazardous material.

NOTE: The USER/SERVICE staff should dispose of all the waste properly, per federal, state, and local waste disposal regulations.

The Ultrasound system is not meant to be used for long-term storage of patient data or images. The user is responsible for the data on the system and a regular backup is highly recommended.

If the system is sent for repair, please ensure that any patient information is backed up and erased from the system before shipping. It is always possible during system failure and repair to lose patient data. GE is not responsible for the loss of this data.

If PHI (Patient Healthcare Information) data needs to be sent to GE employees for service purposes, GE will ascertain agreement from the customer. Patient information shall only be transferred by approved service processes, tools and devices restricting access, protecting or encrypting data where required, and providing traceability in the form of paper or electronic documents at each stage of the procedure while maintaining compliance with cross-border restrictions of patient information transfers.

EMC, EMI and ESD

What is EMC?

Electromagnetic compatibility describes a level of performance of a device within its electromagnetic environment. This environment consists of the device itself and its surroundings including other equipment, power sources and persons with which the device must interface. Inadequate compatibility results when a susceptible device fails to perform as intended due to interference from its environment or when the device produces unacceptable levels of emission to its environment. This interference is often referred to as radio-frequency or electromagnetic interference (RFI/EMI) and can be radiated through space or conducted over interconnecting power or signal cables. In addition to electromagnetic energy, EMC also includes possible effects from electrical fields, magnetic fields, electrostatic discharge and disturbances in the electrical power supply.

Compliance

Venue 50 conforms to all applicable conducted and radiated emission limits and to immunity from electrostatic discharge, radiated and conducted RF fields, magnetic fields and power line transient requirements.

For applicable standards, refer to the Safety Chapter of the Ultrasound system's User's Manual.

NOTE: *For CE Compliance, it is critical that all covers, screws, shielding, gaskets, mesh, clamps, are in good condition, installed tightly without skew or stress. Proper installation following all comments noted in this service manual is required in order to achieve full EMC performance.*

Electrostatic discharge (ESD) prevention

DO NOT touch any boards with integrated circuits prior to taking the necessary ESD precautions.

Follow general guidelines for handling of electrostatic sensitive equipment.

Risk of electrical shock, Ultrasound system must be turned off. Avoid all contact with electrical contacts, conductors and components. Always use non-conductive handles designed for the removal and replacement of ESD sensitive parts. All parts that have the potential for storing energy must be discharged or isolated before making contact.

Customer Assistance

Contact Information

If this equipment does not work as indicated in this service manual or in the user manual, or if you require additional assistance, please contact the local distributor or appropriate support resource, as listed below.

Prepare the following information before you call:

1. System ID serial number.
2. Software version.
3. Date and time of occurrence.
4. Sequence of events leading to issue.
5. Is the issue repeatable?
6. Imaging mode, probe, preset/application.
7. Media brand, speed, capacity, type.
8. Save image capture, cine loop.

NOTE: *Restart the application before resuming clinical scanning.*

Chapter 2

Site Preparations

This chapter provides the information required to plan and prepare for the setup of an ultrasound system and Docking Station/Cart. Included are descriptions of the facility and electrical needs to be met by the purchaser of the units.

Overview

Contents in This Chapter

- 'Overview' on *page 2-2*
- 'General Requirements' on *page 2-3*
- 'Facility needs' on *page 2-11*
- 'Environmental Dangers' on *page 2-19*

General Requirements

Contents in This Section

- ‘Ultrasound system environmental requirements’ on *page 2-3*
- ‘Electrical requirements’ on *page 2-6*
- ‘EMI limitations’ on *page 2-8*
- ‘Probes environmental requirements’ on *page 2-10*

Ultrasound system environmental requirements

If the Ultrasound system is very cold or hot

When unpacking the Ultrasound system, allow the temperature of the Ultrasound system to stabilize before powering up. The following table describes guidelines for reaching operational temperatures from storage or transport temperatures.

If the Ultrasound system is very cold or hot, do not turn on its power until it has had a chance to acclimate to its operating environment.

Table 2-1: Ultrasound system acclimate time

| | | | | | | | | | | | | | | | | | | | | | | | |
|-----|-----|-----|-----|-----|-----|-----|-----|----|----|----|----|----|----|----|----|----|-----|-----|-----|-----|-----|-----|-----|
| °C | -40 | -35 | -30 | -25 | -20 | -15 | -10 | -5 | 0 | 5 | 10 | 15 | 20 | 25 | 30 | 35 | 40 | 45 | 50 | 55 | 60 | 65 | 70 |
| °F | -40 | -31 | -22 | -13 | -4 | 5 | 14 | 23 | 32 | 41 | 50 | 59 | 68 | 77 | 86 | 95 | 104 | 113 | 122 | 131 | 140 | 149 | 158 |
| Hrs | 20 | 18 | 16 | 14 | 12 | 10 | 8 | 6 | 4 | 2 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 2 | 4 | 6 | 8 | 10 | 12 |

Environmental specifications for Ultrasound system

The system should be operated, stored, or transported within the parameters outlined below. Either its operational environment must be constantly maintained or the unit must be turned off.

Table 2-2: System Environmental Requirements

| | Operational | Storage | Transport |
|-------------|----------------------------|----------------------------|----------------------------|
| Temperature | 3 - 40°C 37 - 104°F | -5 - 50°C 23 - 122°F | -5 - 50°C 23 - 122°F |
| Humidity | 30 - 80% non-condensing | 10 - 90% non-condensing | 10 - 90% non-condensing |
| Pressure | 700 - 1060hPa | 700 - 1060hPa | 700 - 1060hPa |

Cooling

The cooling requirement for a console Ultrasound system with monitor and on board peripherals, is up to 3800 BTU/h. This figure does not include cooling needed for lights, people, or other equipment in the room.

NOTE: Each person in the room places an additional 300 BTU/h demand on the cooling system.

*NOTE: Temperature in degrees Celsius (°C) conversion to degrees F (°F): (°F) = (°C * 9/5) + 32*

CAUTION

Ensure that the probe face temperature does not exceed the normal operation temperature range.

CAUTION

The Venue 50 system and probe connector is not waterproof. Do not expose the device to water or any kind of liquid.

Lighting

Bright light is needed for Ultrasound system installation, updates and repairs. However, operator and patient comfort may be optimized if the room light is subdued and indirect. Therefore a combination lighting system (dim/bright) is recommended. Keep in mind that lighting controls and dimmers can be a source of EMI which could degrade image quality. These controls should be selected to minimize possible interference.

Electrical requirements

General requirements

NOTE: GE requires a dedicated power and ground for the proper operation of its Ultrasound equipment. This dedicated power shall originate at the last distribution panel before the Ultrasound system.

Sites with a mains power system with defined Neutral and Live:

The dedicated line shall consist of one phase, a neutral (not shared with any other circuit), and a full size ground wire from the distribution panel to the Ultrasound outlet.

Sites with a mains power system without a defined Neutral:

The dedicated line shall consist of one phase (two lines), not shared with any other circuit, and a full size ground wire from the distribution panel to the Ultrasound outlet.

NOTE: Please note that image artifacts can occur, if at any time within the facility, the ground from the main facility's incoming power source to the Ultrasound system is only a conduit.

Electrical requirements for the Ultrasound system

Table 2-3: Electrical Specifications for Venue 50 system

| Voltage | Power | Current | Frequency |
|-------------|-------------|------------|-----------|
| 100-240 VAC | 180 VA max. | 1.6A (max) | 50/60HZ |

Table 2-4: Electrical Specifications for Docking Cart

| Voltage | Power | Current | Frequency |
|-------------|-------------|------------|-----------|
| 100-240 VAC | 380 VA max. | 2.7A (max) | 50/60HZ |

Inrush Current

Inrush current is not a factor to consider due to the inrush current limiting properties of the power supplies.

Table 2-5: Inrush Current

| Voltage | Inrush Current |
|---------|----------------|
| 100V | 75A (max) |
| 240V | 120A (max) |

Site circuit breaker

Power outage may occur. The Venue 50 requires a dedicated single branch circuit. To avoid circuit overload and possible loss of critical care equipment, make sure you do not have any other equipment operating on the same circuit.

It is recommended that the branch circuit breaker for the Ultrasound system be readily accessible.

Site power outlets

A dedicated AC power outlet must be within reach of the Ultrasound system without extension cords. Other outlets adequate for the external peripherals, medical and test equipment needed to support this Ultrasound system must also be present within 1 m (3.2 ft.) of the Ultrasound system. Electrical installation must meet all current local, state, and national electrical codes.

Unit power plug

If the Ultrasound system arrives without a power plug, or with the wrong plug, you must contact your GE dealer or the installation engineer must supply what is locally required.

Power stability requirements

Voltage drop-out:

Max 10 ms.

Power transients (all applications):

Less than 25% of nominal peak voltage for less than 1 millisecond for any type of transient, including line frequency, synchronous, asynchronous, or aperiodic transients.

EMI limitations

Ultrasound systems are susceptible to Electromagnetic Interference (EMI) from radio frequencies, magnetic fields, and transients in the air or wiring. They also generate EMI. The Ultrasound system complies with limits as stated on the EMC label. However there is no guarantee that interference will not occur in a particular installation.

Possible EMI sources should be identified before the Ultrasound system is installed.

Electrical and electronic equipment may produce EMI unintentionally as the result of a defect. Some of these sources include:

- medical lasers
- scanners
- cauterizing guns
- computers
- monitors
- fans
- gel warmers
- microwave ovens
- light dimmers
- mobile phones
- in-house wireless phones (DECT phones)
- wireless computer keyboard and mouse
- air conditioning system
- High Frequency (HF) surgery equipment
- general AC/DC adapters

The presence of a broadcast station or broadcast van may also cause interference.

See: 'EMI prevention/abatement' on *page 2-9* for EMI prevention tips.

EMI prevention/abatement

Table 2-6: EMI prevention/abatement

| EMI RULE | DETAILS |
|---|---|
| Be aware of Radio Frequency sources | <ul style="list-style-type: none"> • Keep the Ultrasound system at least 5 meters (15 feet) away from other EMI sources. • Special shielding may be required to eliminate interference problems caused by high frequency, high powered radio or video broadcast signals. |
| Ground the Ultrasound system | Poor grounding is the most likely reason an Ultrasound system will have noisy images. Check grounding of the power cord and power outlet. |
| Replace all screws, Radio Frequency gaskets, covers, cores | <ul style="list-style-type: none"> • After you finish repairing or updating the Ultrasound system, replace all covers and tighten all screws. • Any cable with an external connection requires a magnet wrap at each end. • Install all covers. Loose or missing covers or Radio Frequency gaskets allow radio frequencies to interfere with the ultrasound signals. |
| Replace broken Radio Frequency gaskets | If more than 20% or a pair of the fingers on an Radio Frequency gasket are broken, replace the gasket. Do not turn on the Ultrasound system until any loose metallic part is removed. |
| Do not place labels where Radio Frequency gaskets touch metal | Where applicable, never place a label where Radio Frequency gaskets meet the Ultrasound system. Otherwise, the gap created will permit Radio Frequency leakage. Or, if a label has been found in such a position, move the label. |
| Use GE specified harnesses and peripherals | The interconnect cables are grounded and require ferrite beads and other shielding. Also, cable length, material, and routing are all important; do not change from what is specified. |
| Take care with cellular phones | Cellular phones may transmit a 5 V/m signal; that could cause image artifacts. |
| Properly route peripheral cables | Where applicable, do not allow cables to lie across the top of the Card Rack or hang out of the peripheral bays. Loop the excess length for peripheral cables inside the peripheral bays. Attach the monitor cables to the frame. |

Probes environmental requirements

Operation and storage temperatures for probes

Table 2-7: Operation and storage temperatures for probes

| Conditions | Temperature |
|---|--------------------------|
| Operation: | 10 to 40°C (50 to 104°F) |
| Storage: | -5 to 50°C (23 to 122°F) |
| Temperature in degrees Celsius (°C) conversion to degrees F (°F): (°F) = (°C * 9/5) + 32 | |

NOTE: Systems and electronic probes are designed for storage temperatures of -5 to +50°C. When exposed to large temperature variations, the product should be kept in room temperature for 10 hours before use.

Facility needs

Contents in This Section

- 'Purchaser responsibilities' on *page 2-12*
- 'Required facility needs' on *page 2-13*
- 'Desirable features' on *page 2-13*
- 'Recommended and Alternate Ultrasound Room Layout' on *page 2-14*
- 'Networking setup requirements' on *page 2-16*

Purchaser responsibilities

The work and materials needed to prepare the site is the responsibility of the purchaser. Delay, confusion, and waste of manpower can be avoided by completing pre-installation work before delivery. Purchaser responsibility includes:

- Procuring the materials required
- Completing the preparations before delivery of the Ultrasound system
- Paying the costs for any alterations and modifications not specifically provided in the sales contract

NOTE: All electrical installations that are preliminary to the positioning of the equipment at the site prepared for the equipment must be performed by licensed electrical contractors. Other connections between pieces of electrical equipment, calibrations, and testing must also be performed by qualified personnel.

NOTE: The products involved (and the accompanying electrical installations) are highly sophisticated and special engineering competence is required. All electrical work on these products must comply with the requirements of applicable electrical codes. The purchaser of GE equipment must only utilize qualified personnel to perform electrical servicing on the equipment.

The desire to use a non-listed or customer provided product or to place an approved product further from the Ultrasound system than the interface kit allows, presents challenges to the installation team. To avoid delays during installation, such variances should be made known to the individuals or group performing the installation at the earliest possible date (preferably prior to the purchase).

The ultrasound suite must be clean prior to delivery of the Ultrasound system. Carpet is not recommended because it collects dust and creates static. Potential sources of EMI (electromagnetic interference) should also be investigated before delivery. Dirt, static, and EMI can negatively impact Ultrasound system reliability.

Required facility needs

- Dedicated single branch power outlet of adequate amperage meeting all local and national codes which is located less than 2.5 m (8 ft.) from the unit's proposed location
- Door opening is at least 76 cm (30 in) wide
- Proposed location for unit is at least 0.2m (0.67 ft.) from the wall for cooling
- Power outlet and place for any external peripheral are within 2 m (6.5 ft.) of each other with peripheral within 1 m of the unit to connect cables.
- Power outlets for other medical equipment and gel warmer
- Power outlets for test equipment and modem within 1 m (3.2 ft.) of unit
- Clean and protected space to store transducers (in their cases or on a rack)
- Material to safely clean probes (done with a plastic container, never metal)

See 'Electrical requirements' on *page 2-6 for more information.*

Desirable features

- Circuit breaker for dedicated power outlet is easily accessible
- Sink with hot and cold water
- Receptacle for bio-hazardous waste, like used probe sheaths
- Emergency oxygen supply
- Storage for linens and equipment
- Nearby waiting room, lavatory, and dressing room
- Dual level lighting (bright and dim)
- Lockable cabinet ordered by GE for its software and proprietary manuals

Recommended and Alternate Ultrasound Room Layout

A minimal floor plan and recommended standard floor plan for ultrasound equipment:

Minimal floor plan suggestion

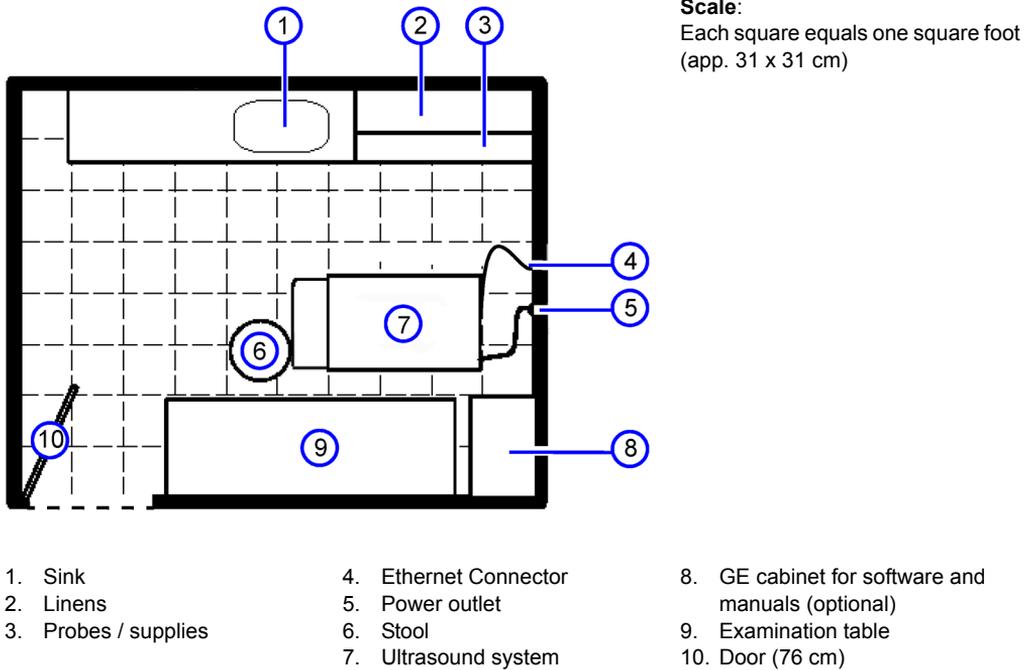

Figure 2-1. Minimal floor plan, 2.5 m x 3 m (8 by 10 foot)

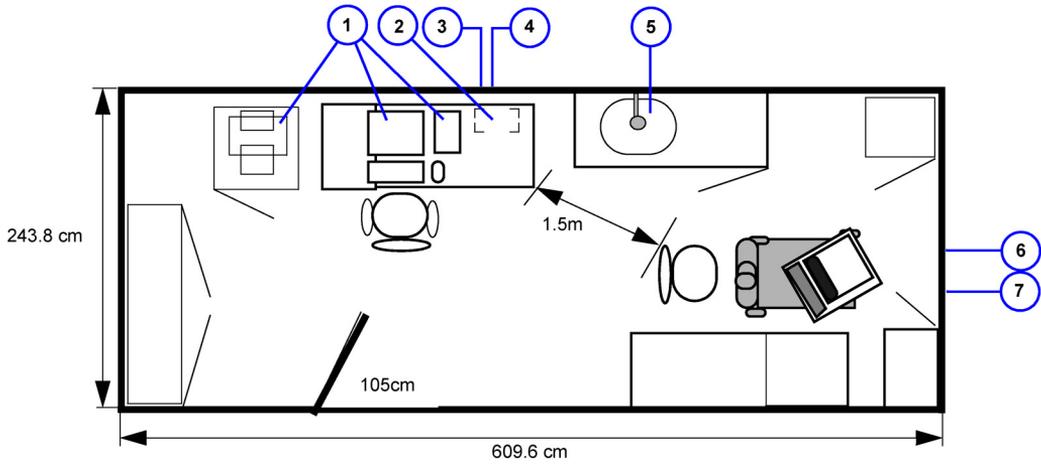

Recommended floor plan suggestion

Figure 2-3. Suggested Room with EchoPAC PC workstation and Ultrasound Scanner

Networking setup requirements

Stand alone Ultrasound system (without network connection)

None.

Scanner connected to hospital's network

Supported networks:

Wireless LAN

Purpose of DICOM network function

DICOM services provide the operator with clinically useful features for moving images and patient information over a hospital network.

Examples of DICOM services include the transfer of images to workstations for viewing or transferring images to remote printers.

As an added benefit, transferring images in this manner frees up the on-board monitor and peripherals, enabling viewing to be done while scanning continues.

With DICOM, images can be archived, stored, and retrieved faster, easier, and at a lower cost.

DICOM Option Pre-installation requirements

To configure the Ultrasound system to work with other network connections, the site's network administrator must provide information to complete the form "Worksheet for DICOM Network Information". Ensure that there are no spaces in any field of the form.

See:

Entries must include:

- A host name, local port number, AE Title, IP address and Net Mask for the Ultrasound system.
- The IP addresses for the default gateway and other routers at the site for ROUTING INFORMATION.
- The host name, IP address, port and AE Title for each device the site wants connected to the Ultrasound system for DICOM APPLICATION INFORMATION. A field for the make (manufacturer) and the revision of the device, is also included. This information may be useful for error solving.

Figure 2-4. Worksheet for DICOM Network Information

Environmental Dangers

Commercial devices such as laser cameras, printers, VCRs and external monitors, usually exceed allowable leakage current limits and, when plugged into separate AC outlets, are in violation of patient safety standards. Suitable electrical isolation of such external AC outlets, or providing the device with extra protective earth, will be required in order to meet UL60601-1 and IEC60601-1 standards for electrical leakage.

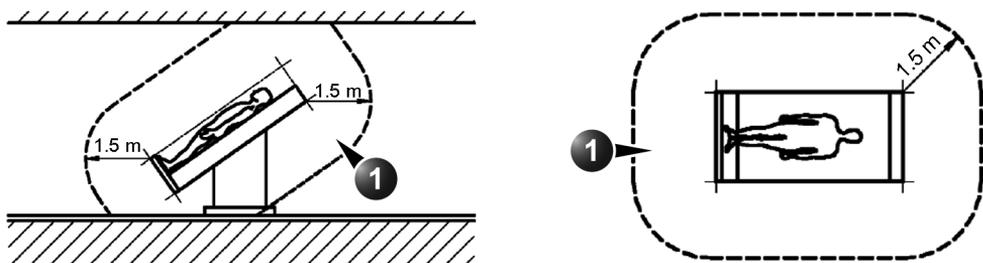

Patient Environment IEC60601-1 and ANSI AAMI ES60601-1

Sub Clause 3.79 and figure A.9 (IEC60601-1:2005 and ANSI AAMI ES60601-1:2005)

Such an area is an environment in which medical diagnosis, monitoring or treatment is carried out. It is very difficult to attach unique dimensions to the PATIENT ENVIRONMENT.

In practice a distance of 2,5 m (8.2 ft.) above the floor on which the medical personnel stand and a horizontal distance of 1,5 m (4.9 ft.) have justified themselves as indicative of the dimensions of the Patient Environment.

The patient environment/vicinity will be depicted as a dashed line in this procedure. See example below.

1. Patient environment

Figure 2-5. Patient environment

Chapter 3

System Setup

This chapter contains information needed to install Venue 50 system.

Included is a procedure that describes how to receive and unpack the equipment and how to file a damage or loss claim.

How to prepare the facility and unit of the actual installation, and how to check and test the unit, probes, and external peripherals for electrical safety are also included in this procedure.

Contents in this chapter

- 'Overview' on *page 3-2*
- 'Setup reminders' on *page 3-3*
- 'Receiving and unpacking the equipment' on *page 3-6*
- 'Preparing for Setup' on *page 3-22*
- 'Completing the setup' on *page 3-23*
- 'System Configuration' on *page 3-29*
- 'Paperwork after setup' on *page 3-56*

Setup reminders

Average setup time

- Unpacking the Venue 50: 20 minutes
- Set up Venue 50 wo/options: 30 minutes (dependent on the configuration that is required)
- DICOM Network Configuration: 30 minutes

The Venue 50 installation and functional checkout will take approximately one hour. Venue 50 console with optional equipment may take slightly longer.

Setup warnings

WHEN USING ANY TEST INSTRUMENT THAT IS CAPABLE OF OPENING THE AC GROUND LINE (I.E., METER'S GROUND SWITCH IS OPEN), DON'T TOUCH THE ULTRASOUND SYSTEM!

To prevent electrical shock, connect the unit to a properly grounded power outlet. Do not use a three to two prong adapter. This defeats safety grounding.

Do not wear the ESD wrist strap when you work on live circuits and more than 30 V peak is present.

Do not operate this unit unless all board covers and frame panels are securely in place. System performance and cooling require this.

Setup warnings (continued)

1. There are no operator serviceable components. To prevent shock, do not remove any covers or panels. Should problems or malfunctions occur, unplug the power cord. Only qualified service personnel should carry out servicing.

NOTE:

For information regarding packing labels, refer to LABELS ON PACKAGE.

Equipment damage possibility. Turning the system on without acclimation after arriving at site may cause the system to be damaged.

If the Ultrasound system is very cold or hot, do not turn on its power until it has had a chance to acclimate to its operating environment.

The following table describes guidelines for reaching operational temperatures from storage or transport temperatures.

| | | | | | | | | | | | | | | | | | | | | | | | |
|-----|-----|-----|-----|-----|-----|-----|-----|----|----|----|----|----|----|----|----|----|-----|-----|-----|-----|-----|-----|-----|
| °C | -40 | -35 | -30 | -25 | -20 | -15 | -10 | -5 | 0 | 5 | 10 | 15 | 20 | 25 | 30 | 35 | 40 | 45 | 50 | 55 | 60 | 65 | 70 |
| °F | -40 | -31 | -22 | -13 | -4 | 5 | 14 | 23 | 32 | 41 | 50 | 59 | 68 | 77 | 86 | 95 | 104 | 113 | 122 | 131 | 140 | 149 | 158 |
| Hrs | 20 | 18 | 16 | 14 | 12 | 10 | 8 | 6 | 4 | 2 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 2 | 4 | 6 | 8 | 10 | 12 |

WHEN USING ANY TEST INSTRUMENT THAT IS CAPABLE OF OPENING THE AC GROUND LINE (I.E., METER'S GROUND SWITCH IS OPEN), DON'T TOUCH THE UNIT!

Setup warnings (continued)

Do not operate this unit unless all board covers are securely in place.

Operator Manual(s)

The User Manual(s) should be fully read and understood before operating the Venue 50 and kept near the Ultrasound system for quick reference.

Acoustic Output Hazard

Although the ultrasound energy transmitted from the Venue 50 probe is within AIUM/NEMA standards, avoid unnecessary exposure. ultrasound energy can produce heat and mechanical damage.

Receiving and unpacking the equipment

Contents in this section

- 'Receiving the Venue 50' on *page 3-7*
- 'Unpacking the Venue 50' on *page 3-9*
- 'Unpacking Docking Station' on *page 3-13*
- 'Unpacking Docking Cart' on *page 3-16*
- 'Unpacking 3-probe Port Box' on *page 3-17*

Receiving the Venue 50

Overview

Improper handling during transportation may harm the equipment inside the package even if the package itself is undamaged.

When a new system arrives, check that any components are not damaged and are not in short supply. If shipping damage or shortage occurs, contact the address shown in Chapter 1.

NOTE: Check the shipping container for special instructions. Verify that the container is intact. In some cases a secondary container may be used. If so, ask the carrier for unpacking instructions.

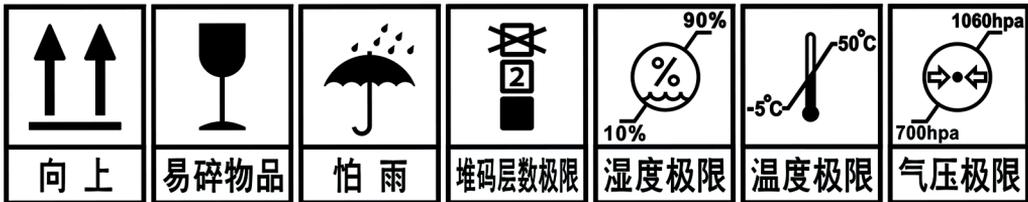

Figure 3-1. Labels on Package

Unpacking the Equipment

Please carefully unpack the system, and do not dispose the package of Venue 50, so that it can be reused for service.

Please keep the protective bag of Venue 50 in box, so that it can be used for shipping or transportation.

Unpacking the Venue 50

1. Cut the four PLASTIC BANDS
2. Cut the adhesive tape and open top covers of paper carton.

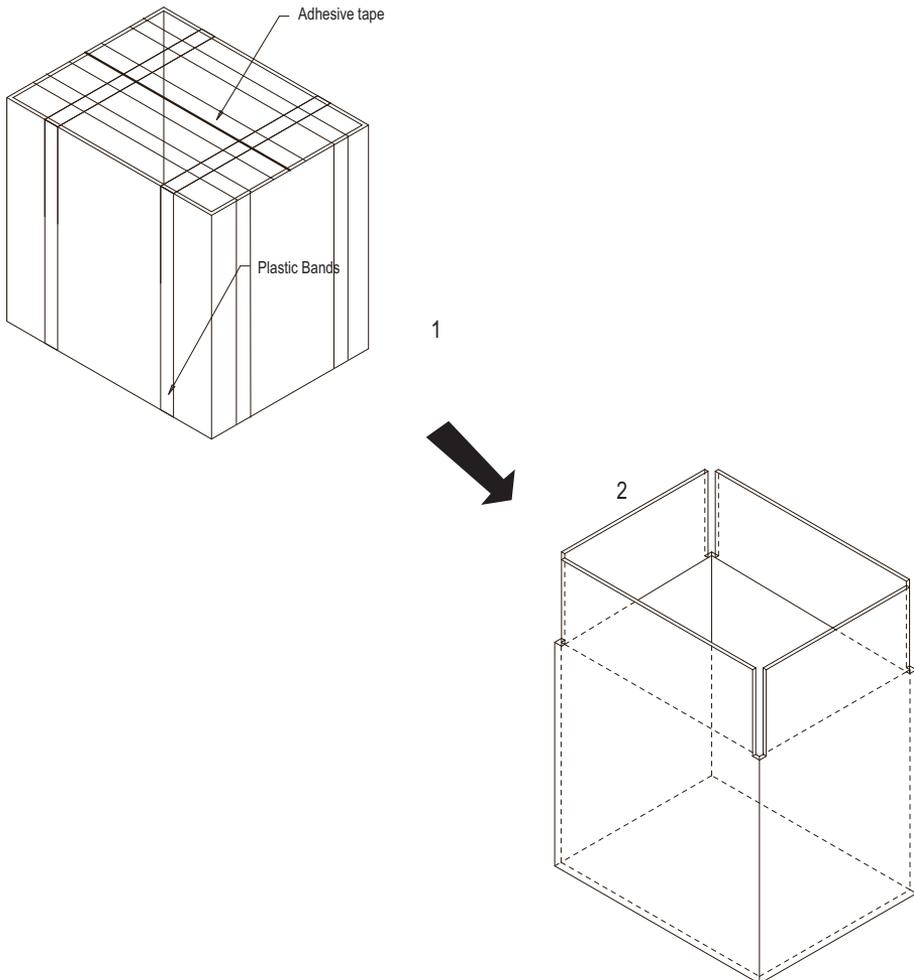

Figure 3-2. Open Top Covers of Paper Carton

Unpacking the Venue 50 (continued)

3. Take out the paper pad on the side. Refer to [Figure 3-3 on page 3-10](#).
4. Take out the Accessories Package and Console Package. Refer to [Figure 3-3 on page 3-10](#).

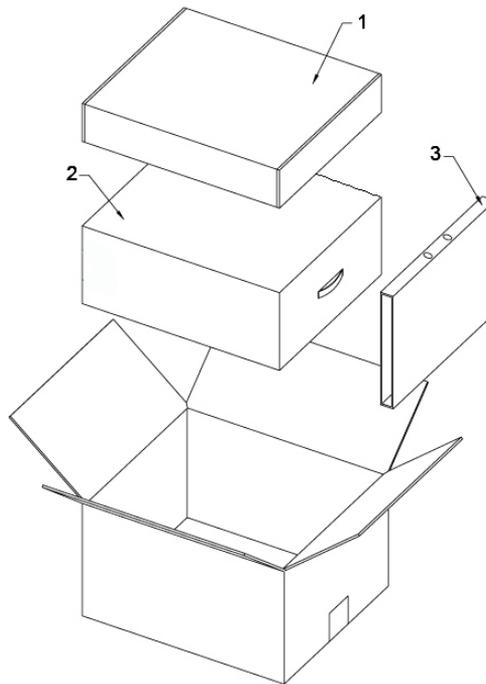

Figure 3-3. Unpacking the Venue 50

Table 3-1: Unpacking the Venue 50

| Item | Description |
|------|---------------------|
| 1 | Accessories Package |
| 2 | Console Package |
| 3 | Paper Pad |

CAUTION

Do not lift the unit by the rubber band. Equipment damage may result.

Unpacking the Venue 50 (continued)

5. Open the Console Package, then remove the pad. Take out the battery package. Take out the console. Take off the protective bag and the PE bag. Refer to [Figure 3-4 on page 3-11](#).

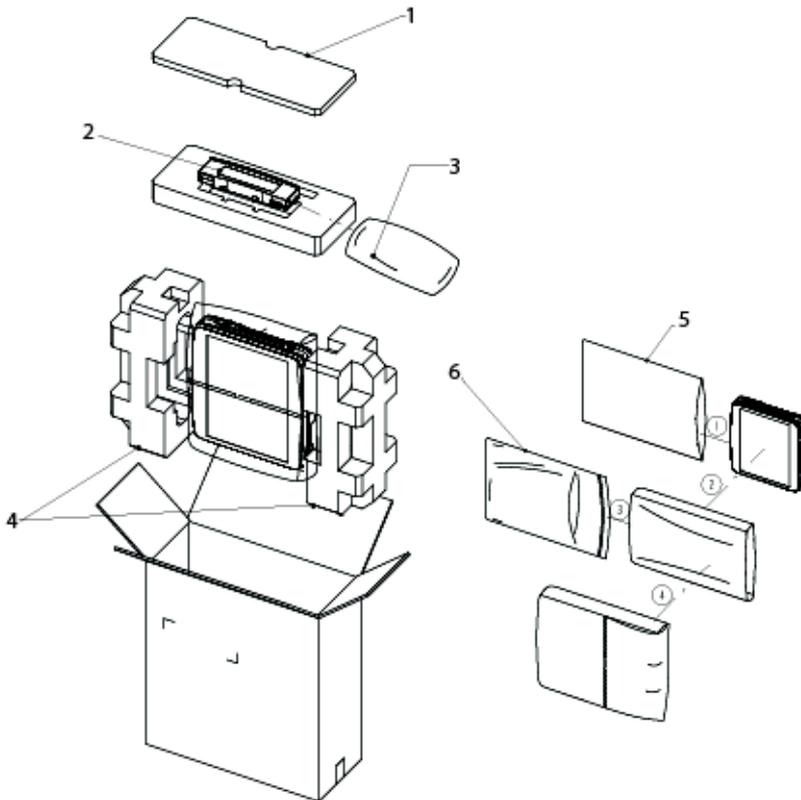

Figure 3-4. Taking out the system

Table 3-2: Taking out the system

| Item | Description |
|------|-------------------------|
| 1 | Paper pad |
| 2 | Battery |
| 3 | Battery bag |
| 4 | Foam |
| 5 | PE bag |
| 6 | Venue 50 Protective bag |

Unpacking the Venue 50 (continued)

- Open the Accessories Package.

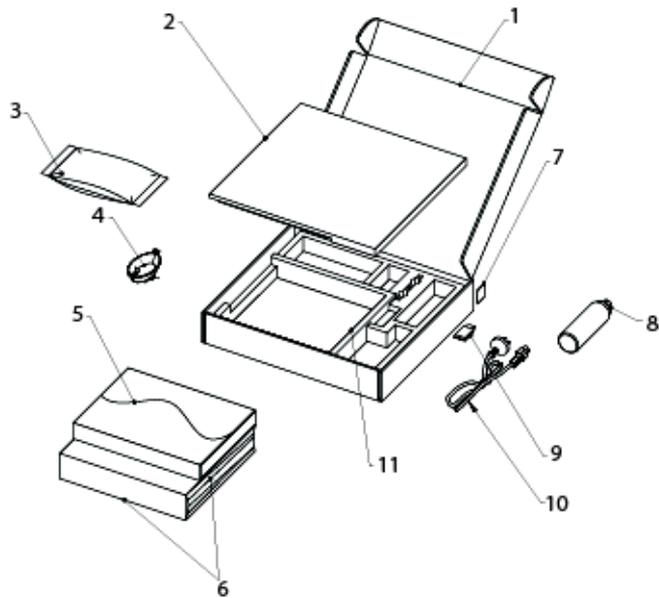

Figure 3-5. Opening Accessories Box

Table 3-3: Accessories Box

| Item | Description |
|------|--|
| 1 | Venue 50 accessories carton |
| 2 | Cover pad |
| 3 | Biopsy kit (option) |
| 4 | Probe bracket for needle guide (option) |
| 5 | Manuals (option) |
| 6 | Manuals (standard) |
| 7 | Software SD Card - for re-loading software as needed |
| 8 | Aquasonic gel |
| 9 | SD Card adapter |
| 10 | Power Cable (option) |
| 11 | Foam |

NOTE: Make sure all the items in the checklist are in the Accessories box, contact GE Service if any problem.

Unpacking Docking Station

1. Cut the four PLASTIC BANDS.
2. Cut the adhesive tape and open the top covers of the paper carton.

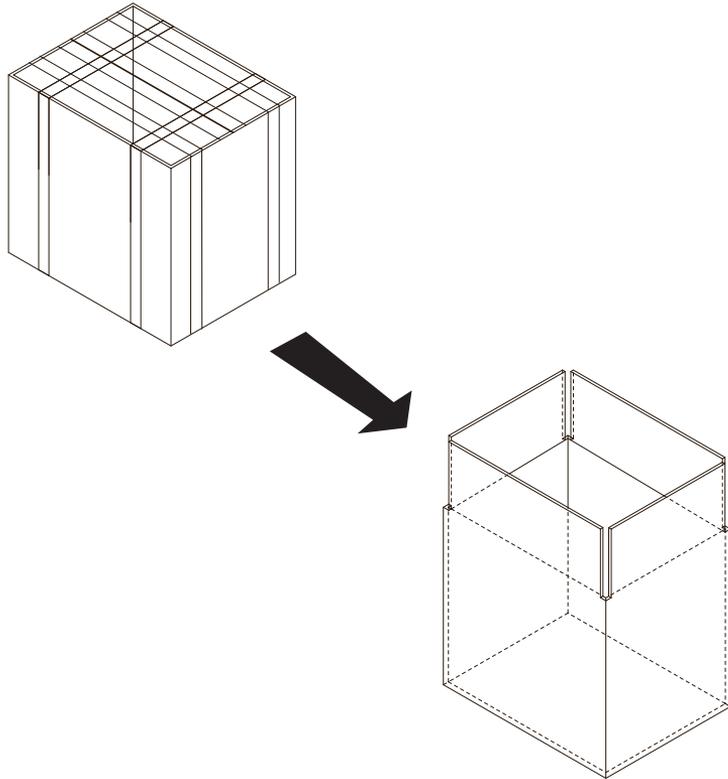

Figure 3-6. Open the top covers of the paper carton

Unpacking Docking Station (continued)

3. Remove top foam, take out the Docking Station Module and probe holders.
4. Take out the Base support module.

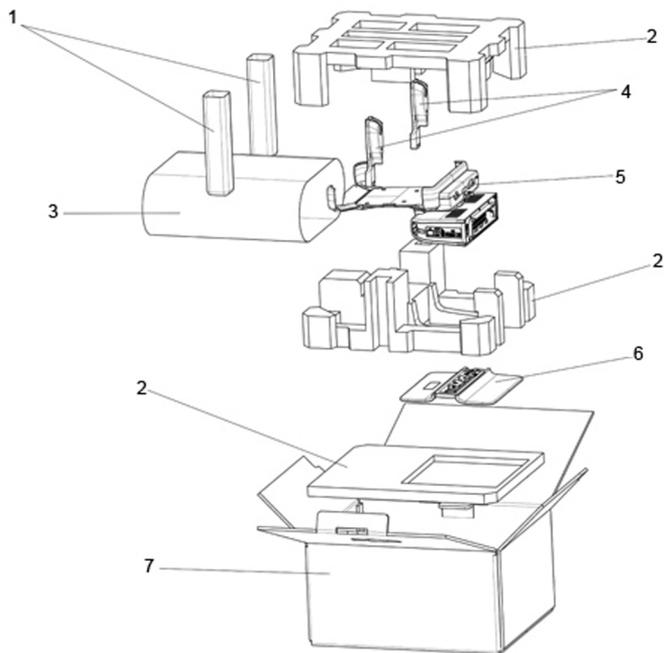

Figure 3-7. Unpacking Docking Station

Table 3-4: Docking Station

| Item | Description |
|------|-------------------------------------|
| 1 | Probe holder bag |
| 2 | Foam |
| 3 | Docking Station bag |
| 4 | Probe holders |
| 5 | Docking Station module |
| 6 | Docking Station desk support module |
| 7 | Carton |
| 8 | Power cord |

Unpacking Docking Station (continued)

5. Place the Docking Station Module on track of Base Support Module starting from the left, and slowly move it to the right till it clicks.

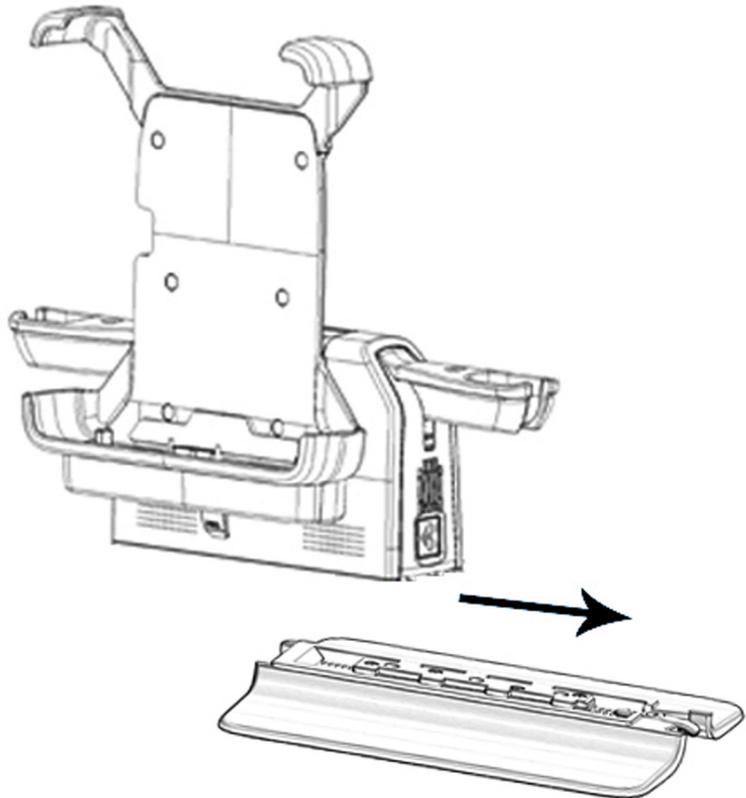

Figure 3-8. Install Docking Station

Unpacking Docking Cart

1. Cut the adhesive tape.
2. Open the top cover of paper carton.
3. Rotate the plastic locker counter clockwise and pull it out. Unlock all the four plastic lockers.
4. Remove the carton frames on both sides.
5. Remove all the foam and the ESD bag, cut the wire ties on the chassis. Take out the Docking Cart.

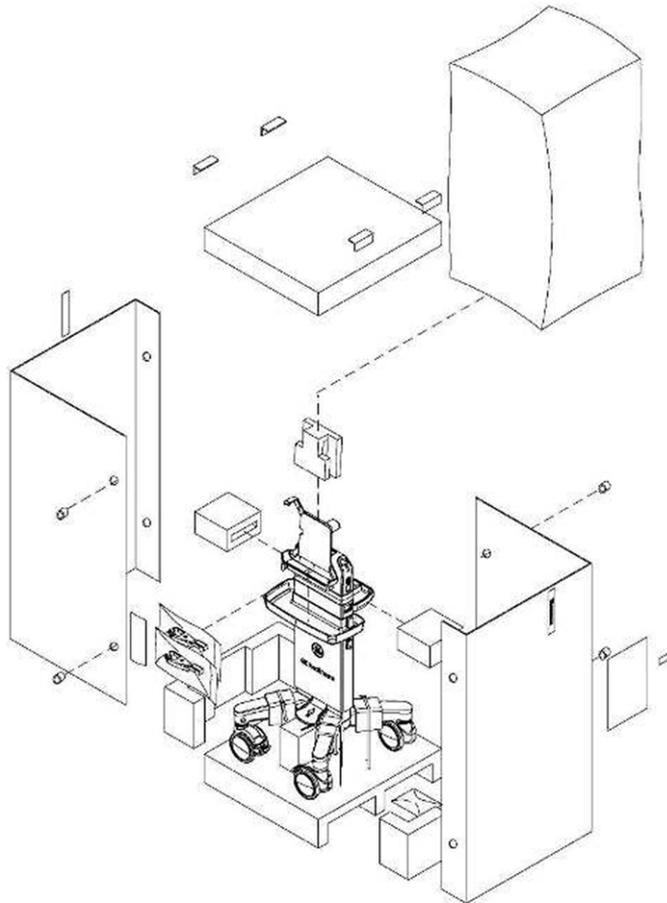

Figure 3-9. Unpack the Docking Cart

Unpacking 3-probe Port Box

1. Cut the four PLASTIC BANDS.
2. Cut the adhesive tape and open top covers of paper carton.

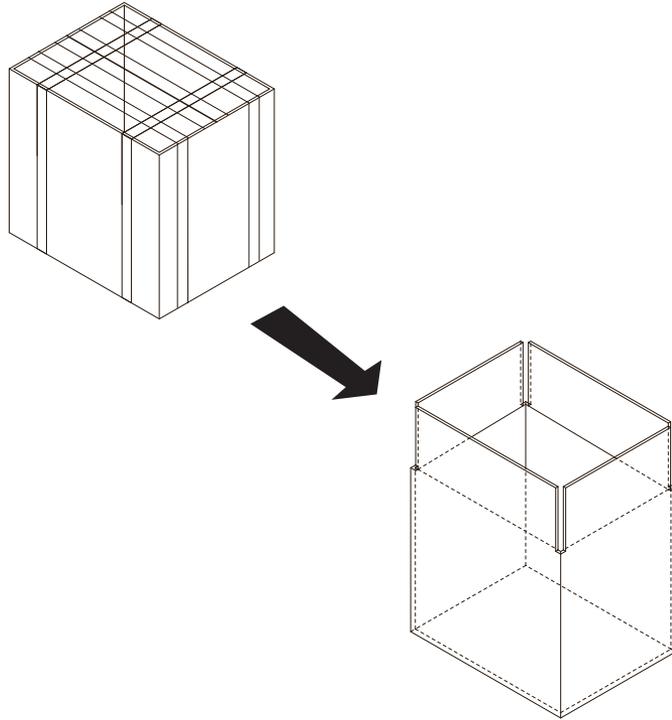

Figure 3-10. Open top covers of paper carton

Unpacking 3-probe Port Box (continued)

3. Remove the top foam, and take out the 3-probe Port Box, multi-probe holders, E8CS-SC probe holder and gel holder.
4. Continue to remove the foam, then take out the printer shelf and the drawer.

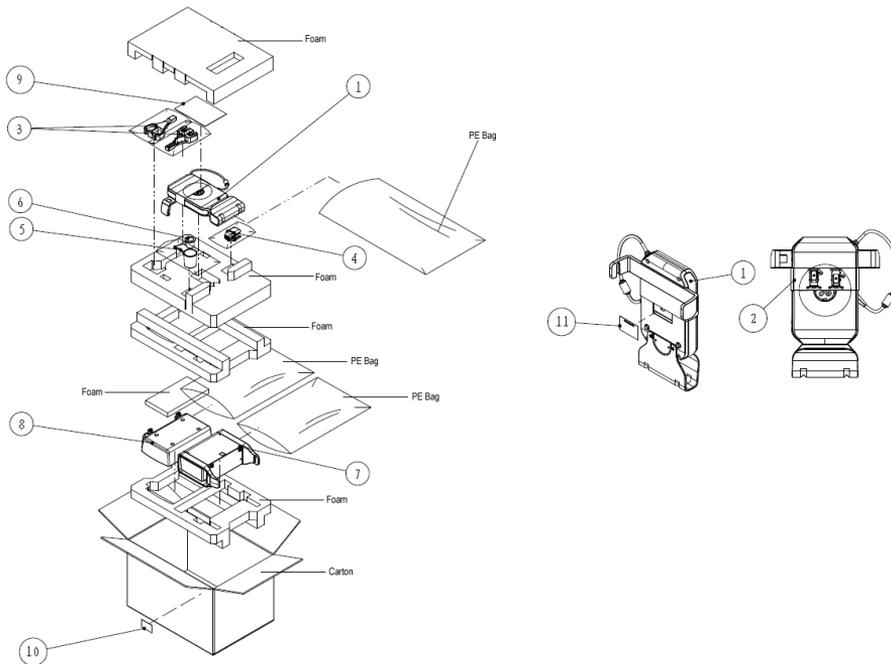

Figure 3-11. Unpacking the 3-probe Port Box

Table 3-5: 3-probe Port Box

| 6 | Rating Plate label for carton |

Moving into Position

In general, a single adult can move the Venue 50. Before moving, store all loose parts in original accessory box or in back pack. Return probes to original box.

Packing the Equipment

Please pack Venue 50 in the reverse order of unpacking.

Preparing for Setup

Verify customer order

Compare items received by the customer to that which is listed on the delivery order. Report any items that are missing, back ordered, or damaged.

Physical inspection

Verify that the system arrived intact (visual inspection).

If the system has been damaged, please refer to '[Damage in Transportation](#)' on [page i-11](#) in the beginning of this manual.

System Voltage Settings

- Verify that the scanner is set to the correct voltage. The Voltage settings for the Venue 50 Scanner is found on a label located on the AC adapter.
- 220-240VAC(China); 100-120VAC(USA/Japan); 220-240VAC(Europe, Latin America).

NOTE: Check your local grid and confirm the voltage.

Connecting Docking Station/Cart to the wrong voltage level will most likely destroy the system.

EMI protection

The Venue 50 has been designed to minimize the effects of Electro-Magnetic Interference (EMI). Many of the covers, shields, and screws are provided primarily to protect the system from image artifacts caused by this interference. For this reason, it is imperative that all covers and hardware are installed and secured before the unit is put into operation.

See '[EMI limitations](#)' on [page 2-8](#) for more information about EMI protection.

Completing the setup

Purpose of this section

This section describes how to complete the installation of Venue 50.

Contents in this section

- 'System specifications' on *page 3-29*
- 'Electrical specifications' on *page 3-30*
- 'Connecting probes' on *page 3-25*
- 'Power On / Boot Up' on *page 3-28*
- 'Power shut down' on *page 3-28*

Mounting the System to Docking Station/Cart

Follow these steps to mount the system to docking station/cart:

1. Place the docking station and system on a stable surface.
2. Carefully pick up the system. Align the port on the Venue 50 with the docking port and carefully push into place.

Figure 3-14. Mount to Docking Station/Cart

3. Press the locking lever down until it locks in place.

Figure 3-15. Press the locking lever

Connecting probes

Connect a probe

NOTE: *It is not necessary to turn OFF power to connect or disconnect a probe.*

Do not allow the probe head to hang freely. Excessive impact to the probe will result in irreparable damage.

To prevent probe connector pins damage, or PCB board damage, do not use excessive force when connecting the probes.

Keep the probe cables away from the wheels.
Do not bend the probe cables.
Do not cross cables between probes.

Connect a probe (continued)

Follow these steps to connect a probe:

1. Place the probe's carrying case on a stable surface and open the case.
2. Carefully remove the probe and unwrap the probe cable.
3. DO NOT allow the probe head to hang free. Impact to the probe head could result in irreparable damage.
4. Before connecting the probe:
 - a. Do a visual check of the probe pins and system sockets.
 - b. Remove any dust or foam rests from the probe pins.
 - c. Verify the probe and the probe cable for any visual damage.
5. Plug the probe connector into the probe port on right side of Venue 50 with the label facing the front.

Figure 3-16. Connect a probe

6. Carefully position the probe cable so that it is free to move and is not resting on the floor.

Disconnect a probe

Follow these steps to disconnect a probe:

1. Press the locking lever to pop up the connector.

Figure 3-17. Pop up the locking lever

2. Pull the probe and connector straight out of the probe port.

Figure 3-18. Disconnect a probe

NOTE: Please do not drag the probe cable in order to avoid cable damage.

Power On / Boot Up

For procedure, please refer to [‘Power ON/Boot Up’](#) on *page 4-4*.

Power shut down

For procedure, please refer to [‘Power shut down’](#) on *page 4-7*.

System Configuration

System specifications

System requirements verification

- Verify that the site meets the requirements listed in Chapter 2.
(See: '[Facility needs](#)' on [page 2-11](#).)
- Verify that the specifications below don't conflict with any on-site conditions.

Physical dimensions

Table 3-7: Physical Dimensions of Venue 50

| Height | Width | Depth | Unit |
|--------|-------|-------|--------|
| 282 | 274 | 56 | mm |
| 11.1 | 10.8 | 2.2 | inches |

Electrical specifications

Connecting a Venue 50 to the wrong voltage level will most likely destroy it.

Verification of the system’s voltage setting

Verify that the mains voltage specified for the Venue 50 is available on-site.

The voltage setting for the unit is found on the rating plate of the system.

Figure 3-19. Rating Plate Label

Electrical specifications for Venue 50

In the table below, the electrical specifications for Venue 50 includes on board peripherals.

Table 3-8: Electrical specifications for Venue 50

| Part Number | Description | Voltage | Tolerances | Power consumption | Frequency |
|-------------|------------------|-------------|------------|-------------------|-----------|
| 5448430 | Venue 50 Console | 100-240 VAC | ± 10% | 1.6A max. | 50/60Hz |

Approved peripherals

Table 3-9: Approved peripherals

| Device | Manufacturer | Model | Interface | Remark |
|-----------------------|--------------|-------------------------|-----------|--------|
| B/W Printer | SONY | UP-D897,UP-D898 | USB | |
| USB Memory Stick | SanDisk | SanDisk 4G | USB | |
| SD Card Reader | Transcend | TS-RDP5K | USB | |
| Wireless Network Card | Edimax | EW-7711UTn | USB | |
| Barcode Reader | Honeywell | Xenon 1900 | USB | |
| Footswitch | Steute | MKF 21S/1S-MED HID GP26 | USB | |

Connecting Cables

WARNING

Equipment damage possibility. Be sure to use the following recommended connecting cables to connect recording devices and a network with Venue 50 console.

Table 3-10: List of Connecting Cables

| Name | Part No. | Figure | NOTE |
|-------------------|----------|---|-----------------|
| Printer USB Cable | |  | For USB Printer |

Peripheral/Accessories Connector Panel

Venue 50 peripherals and accessories can be properly connected using the side connector panel.

Docking Station/Cart Connector Panel

Located on the two sides of Docking Station/Cart are input and output connectors.

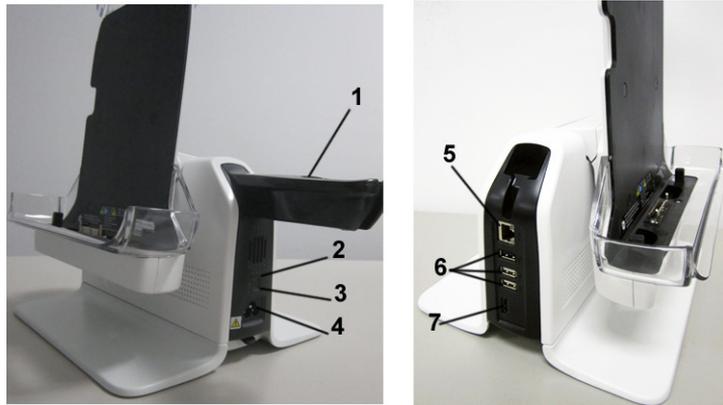

Figure 3-20. Docking Station/Cart Connector Panel

1. Probe Holder (Holder on each side)
2. AC Power Indicator
3. Battery Charging Indicator
4. AC Power Input Socket
5. LAN Port
6. 3 USB Ports (for peripherals connection)
7. HDMI Port (for external monitor connection)

NOTE: Without AC power, only the first USB port (from top to bottom) is available.

NOTE: Without AC power, LAN port, the second and third USB ports and HDMI port are not available.

NOTE: Each outer (case) ground line of peripheral/accessory connectors are protectively grounded. Signal ground lines are not isolated.

Pin Assignment for each connector

Pin Assignment of USB

Table 3-11: Pin Assignment of USB

| Pin No. | Signal | Pin No. | Signal |
|---------|--------|---------|--------|
| 1 | +5VDC | 3 | DATA+ |
| 2 | DATA- | 4 | GND |

Pin Assignment of External HDMI

Table 3-12: Pin Assignment of HDMI

| Pin No. | Signal | Pin No. | Signal |
|---------|-------------------|---------|---------------------------|
| 1 | TMDS Data2+ | 11 | TMDS Clock Shield |
| 2 | TMDS Data2 Shield | 12 | TMDS Clock- |
| 3 | TMDS Data2- | 13 | CEC |
| 4 | TMDS Data1+ | 14 | Reserved (N.C. on device) |
| 5 | TMDS Data1 Shield | 15 | SCL |
| 6 | TMDS Data1- | 16 | SDA |
| 7 | TMDS Data0+ | 17 | DDC/CEC Ground |
| 8 | TMDS Data0 Shield | 18 | +5V Power |
| 9 | TMDS Data0- | 19 | Hot Plug Detect |
| 10 | TMDS Clock+ | | |

Peripherals Connection

1. Insert SD Card to the system.
 - a. Pull the SD Socket cover towards the back of the Venue 50 to make it easy to open.

Figure 3-21. Open SD Card Socket cover

- b. Insert the SD Card into the SD Card Socket on top of the system with the labeled side facing the front of the Venue 50.

Figure 3-22. Insert SD Card to the system

Peripherals Connection (continued)

2. Connect B/W printer to the system. B/W Printer can be properly connected to the USB port of the Docking Station/ Cart.

Figure 3-23. B/W Printer Connection

3. Connect USB Memory stick to the system. USB Memory stick can be properly connected to the USB port on the Docking Station/Cart.

Figure 3-24. USB Memory Stick Connection

Peripherals Connection (continued)

4. Connect external LCD to the HDMI port of the Docking Station/Cart.

Figure 3-25. External LCD Connection

5. Connect the Wireless Network Card to the USB port of the Docking Station/Cart.

Figure 3-26. Wireless Network Card Connection

Peripherals Connection (continued)

6. Connect the footswitch to the USB port of the Docking Station/Cart.

Figure 3-27. Footswitch Connection

7. Connect the barcode reader to the USB port of the Docking Station/Cart.

Figure 3-28. Barcode Reader Connection

Connect 3-probe Port to Docking Cart

1. Remove any storage trays from the front of the Docking Cart. Mount the 3-probe Port on the Docking Cart.

Figure 3-29. 3-probe Port Connection

NOTE: Be sure to fully inset the grooves into the top side slides.

NOTE: The 3-probe Port shall be mounted to the front of the Docking Cart.

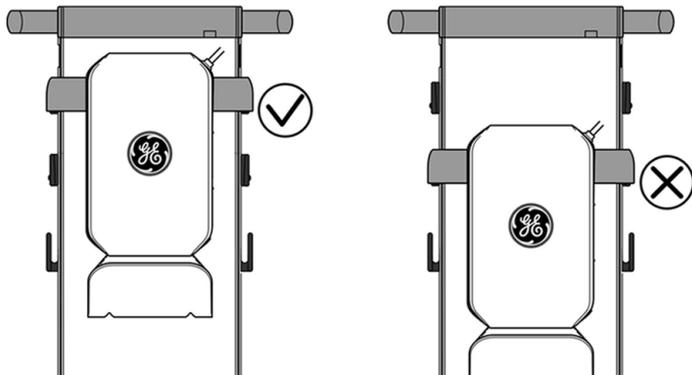

Figure 3-30. 3-probe Port Position

Connect 3-probe Port to Docking Cart (continued)

2. Connect the 3-probe Port to the Venue 50.

Figure 3-31. 3-probe Port Connection

3. Press the cable hook and put the cable into the hook.

Figure 3-32. Cable Hook

NOTE: *Pull the cable hook if it does not pop out completely.*

4. Connect the probe holders to the Docking Cart.

Figure 3-33. Probe Holders Connection

Connect 3-probe Port to Docking Cart (continued)

5. Connect the E8CS-SC probe holder and gel holder to the probe holders.

Figure 3-34. Probe Holder Connection

6. Connect the probes to the 3-probe port.

Figure 3-35. Probe Connection

Connect 3-probe Port to Docking Cart (continued)

7. Mount the printer shelf to the Docking Cart.

Attach the basket to the printer shelf and mount the printer shelf to the Docking Cart.

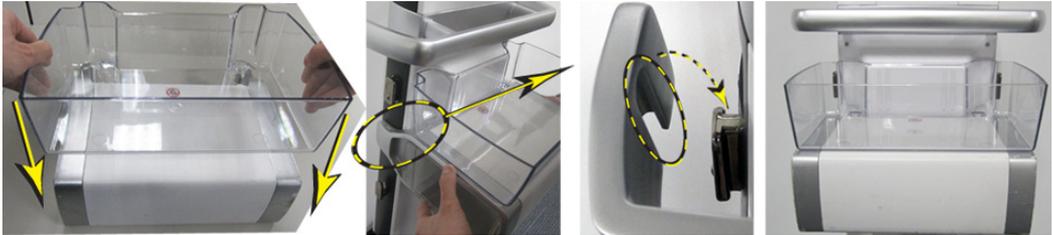

Figure 3-36. Printer Shelf Connection

NOTE: *Be sure to fully inset the grooves into the second side slides.*

NOTE: *The printer shelf shall be mounted to the back of the Docking Cart.*

NOTE: *The console in the figures above is only for your reference. Please connect Venue 3-probe port to Venue 50.*

Connect 3-probe Port to Docking Cart (continued)

8. Choose probes.

Power on the system and press **Home** to choose the appropriate probe.

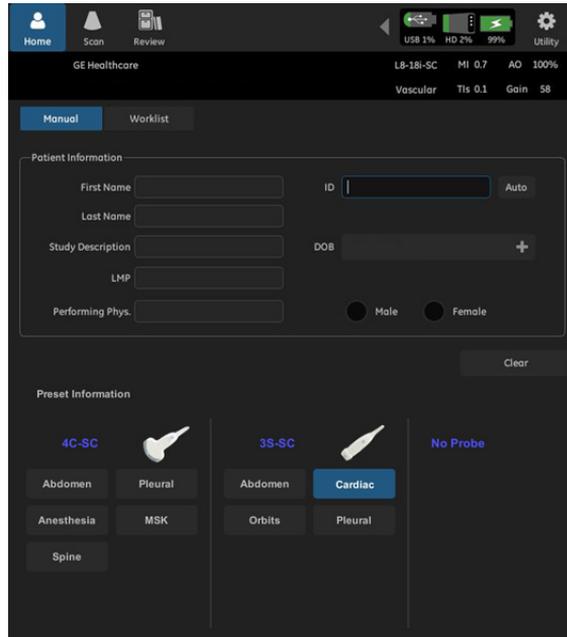

Figure 3-37. Choose Probes

NOTE: *The order of the probes shown on the screen is the same as that of the probes connected to the 3-probe Port.*

“No Probe” may display on the screen due to the following:

- No probe is connected to the relevant port.
- The probe may not be fully inserted into the slot. Recheck the connection to insure proper connection.
- The probe is connected to the relevant port, but the software option key for this probe has not been activated. Please contact your local GE representative and place an order for the additional software option. See *“Add new software option keys”* in Basic User Manual for more information

Connect Power Module to Docking Cart

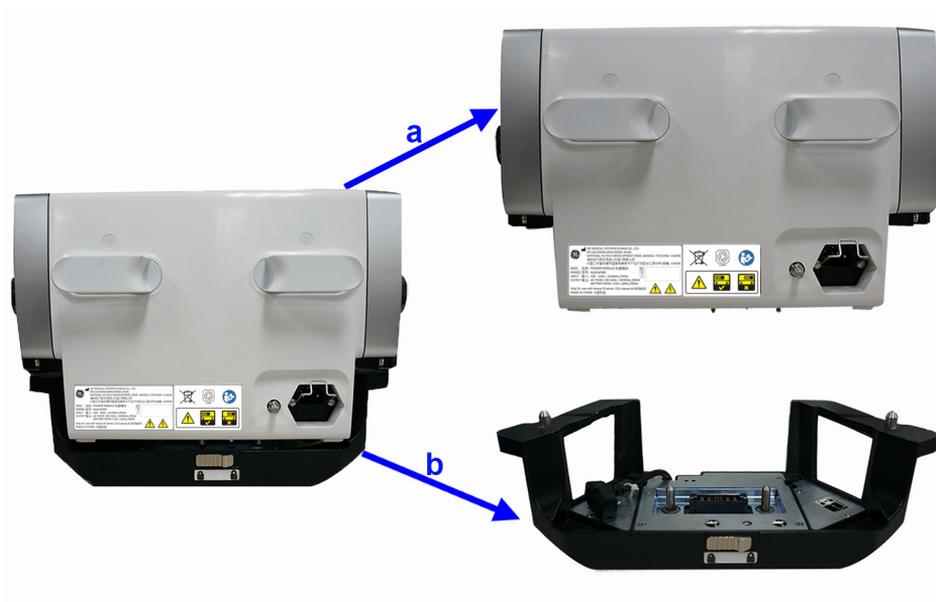

Preparation

Shutdown Venue 50 and disconnect the power cord from the docking cart.

Overview

The whole Power Module kit includes 2 parts:

- a. Power Module
- b. Tray Assy

It is not permitted to disassemble the Power Module by operators.

The Power Module shall be kept away from fire. There is risk of explosion if it is used in an explosive atmosphere.

Mounting Procedure

1. Press the reset tippers to ensure that both hooks pop out.
 - a. Reset tippers
 - b. Hooks

2. Lift the Tray Assy to ensure the bottom of it and the base chasis are at the same height.

3. Push the Tray Assy inward along the edge of the base chasis. Ensure both edges of the Tray Assy are inside of the guide slides of the base chasis.

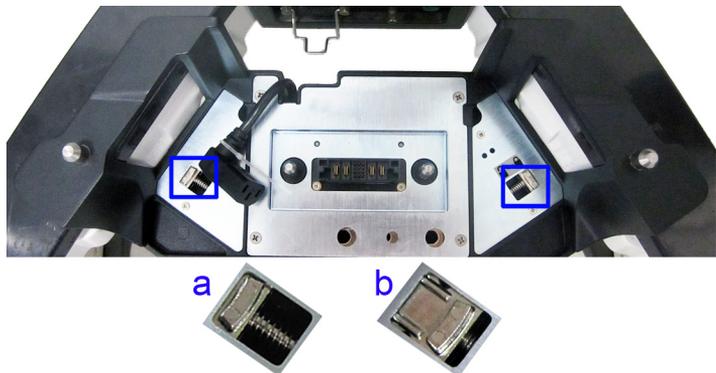

Mounting Procedure (continued)

4. Push it down and fix it to the base chassis.

NOTE: After the Tray Assy is installed successfully, both hooks should be at the lock position.

- a. Lock Position
- b. Unlock Position

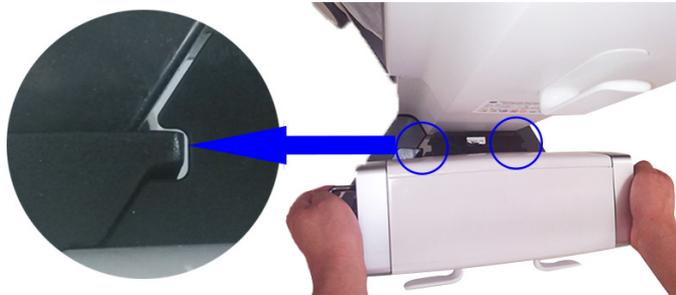

5. Disconnect the cable tie, connect the power cord to the Docking Cart, then position the retaining clip over the power cord.

Mounting Procedure (continued)

6. Install the Power Module to the Tray Assy vertically and ensure both ribs are located in the slots.

NOTE: After installed successfully, the lock button should be at the lock position. If the lock button moves to the unlock position while the Venue 50 is in use, **the Power Module needs to be re-mounted**

Table 3-13: Label/Icon Explanations

| Label/Icon | Explanations |
|---|---|
|  | If the lock button is at the left side, it means it is at the lock position. |
|  | If the lock button is at the right side, it means it is at the unlock position. |

Disconnect Power Module from Docking Cart

Preparation

Shutdown Venue 50 and Power Module, disconnect the power cord from Power Module.

Dismounting Procedure

1. Slide the lock button to the unlock position.

2. Lift up the Power Module vertically.

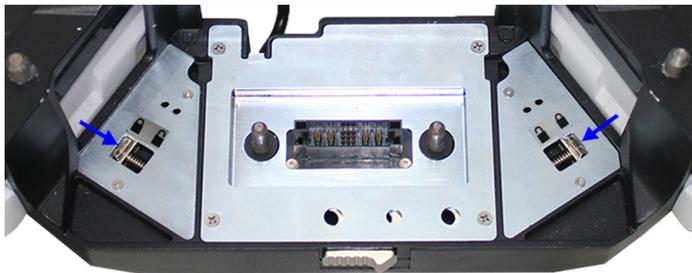

Dismounting Procedure (continued)

3. Position the retaining clip up the power cord and disconnect the power cord.

4. Slide both hooks to unlock position.

5. Lift up the Tray Assy from the base chassis of Docking Cart vertically.

Power Module Usage

Power Module Charging

Connect the Power Module to an active AC outlet with the power cord of the Docking Cart.

If you plan on storing the Power Module for an extended period, fully charge it once every three months.

Power Module Storage

Press and hold the **Power On/Off** switch for three seconds to turn off the Power Module, and it will be ready for storage.

NOTE: To avoid Power Module drain, all connected equipment should be turned off and disconnected from the Power Module after use or during Power Module storage.

If you leave the Power Module discharged for three months or more, its lifecycle may be shortened.

Power on /off the Power Module

Press **Power On /Off** switch for one second to turn on the Power Module. LED2 will turn green.

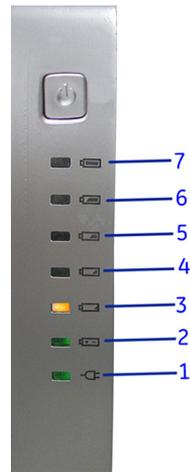

Press **Power On /Off** switch for three seconds or more to turn off the Power Module. LED2 will be off.

*NOTE: If the Power Module is not turned off after three seconds or more, try again to press **Power On/Off** switch to turn it off.*

*NOTE: Press **Power On /Off** switch to turn it on even when an active AC outlet is connected. Otherwise the docking cart, console and peripherals can not get electricity.*

LED Indicators

LED indicators show different status of the Power Module as below:

Table 3-14: LED Indication

| LED | Color | Indication |
|------|----------|-------------------------|
| LED1 | green | on charging |
| LED2 | green | discharging |
| LED3 | flashing | remaining capacity<10% |
| | yellow | remaining capacity>=10% |
| LED4 | green | remaining capacity>=20% |
| LED5 | green | remaining capacity>=40% |
| LED6 | green | remaining capacity>=60% |
| LED7 | green | remaining capacity>=80% |

NOTE: When the Power Module is fully charged, all lights are off except when it is discharging. In this case, only LED2 will be green.

When LED3 is flashing, connect the Power Module with a live AC outlet and record the data at once. Otherwise the data will be missing when the system powers off suddenly

Matrix of Peripheral Working Power Load

NOTE: *The working power load is the sum of all the connected peripherals and the console. The console power consumption is 40W.*

NOTE: *When the B/W USB Printer stands by, the power load is 10W.*

NOTE: *The maximum rated power load of the Power Module is 200W. Please do not overload.*

Table 3-15: Working Power Load of Printer

| | |
|------------------------|-----------------|
| Device | B/W USB Printer |
| Model | UP-D897,UP-D898 |
| Manufacturer | SONY |
| Working Power Load (W) | 101 |

NOTE: *Do not remove the console battery from Venue 50 system. If the power, with the operating voltage 110v or below, goes off, the Power Module may fail to function.*

NOTE: *Please avoid dropping the Power Module.*

NOTE: *If the Power Module is splashed with water or other liquid, it must be shut down and cleaned immediately.*

NOTE: *Ensure that no condensate is on the Power Module before turning it on. If there is condensate, please put the Power Module in a dry and ventilated place. It is not allowed to turn on the Power Module until the condensate completely disappears.*

Power Module Rating Plate/Warning Label

1. Rating Plate/Warning Label Explanations

Table 3-16: Label/Icon Explanations

| Label/Icon | Explanations |
|--------------|--|
| AC MODE | The power is supplied by the Alternating Current (AC) |
| BATTERY MODE | The power is supplied by the battery when the Alternating Current (AC) is off. |

2. If the lock button moves to the unlock position while the Venue 50 is in use, the Power Module needs to be re-mounted.

For the explanation of other labels/Icons on Rating Plate/Label, please refer to the latest revision of Venue 50 Basic User Manual.

NOTE: Please refer to the operation manual of each peripheral for information needed by the user to operate the system safely.

Available probes

For different software versions, please see in specification in the Venue 50 Basic User Manual for probes and intended uses.

Table 3-17: List of Probes for Venue 50

| Probe Name | Material of Headshell | TYPE | Catalog Number | Part Number |
|------------|-----------------------|--------|----------------|-------------------------------|
| 3S-SC | VALOX | SECTOR | H40452LD | 5499959 is to replace 5309652 |
| 12L-SC | VALOX | LINEAR | H40452LB | 5499958 is to replace 5304023 |
| 4C-SC | VALOX | CONVEX | H40452LM | 5499960 is to replace 5337604 |
| L8-18i-SC | VALOX | LINEAR | H40452LZ | 5499595 is to replace 5384872 |
| E8CS-SC | VALOX | CONVEX | H40462LL | 5499966 is to replace 5413888 |
| 10C-SC | VALOX | CONVEX | H48862LZ | 5456227 |

Software Options configuration

Software Option installation introduction

Refer to the Venue 50 *Basic User Manual*, Chapter 4, 'Customizing Your System' for information on configuring items like Hospital, Department, Language, Date and Time.

For information on configuring Software Options, please refer to the Venue 50 Basic User Manual, Chapter 4, Customizing Your System.

Software version check-out

1. Power on Venue 50 scanner and wait until system booting to main screen.
2. Press **Utility**, then select **About**.
3. Check whether the software version is the right one for use.

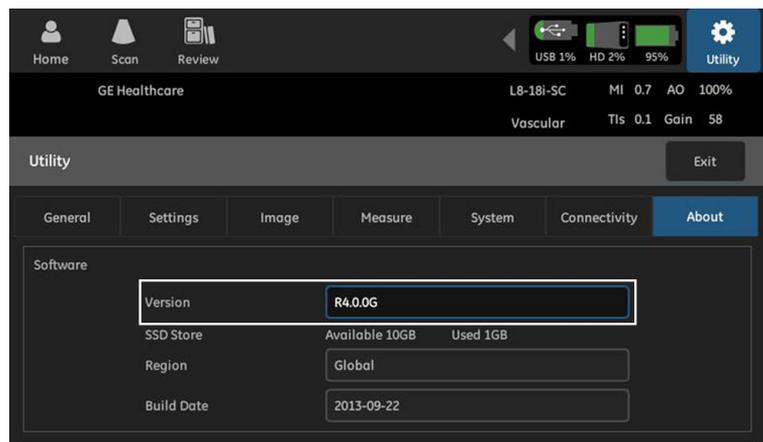

Figure 3-38. Software Version

Paperwork after setup

NOTE: During and after setup, the documentation (i.e. User Manuals, Installation Manuals, etc.) for the Venue 50 and the peripherals must be kept as part of the original Ultrasound system documentation. This ensures that all relevant safety and user information is available during the operation and service of the complete Ultrasound system.

User's Manual(s)

Check that the correct User Manual(s) for the system and software revision, is included with the installation. Specific language versions of the User Manual may also be available. Check with your GE Sales Representative for availability.

For a complete list of User's Manuals for Venue 50, refer to Chapter 9 in this manual.

Product Locator Installation Card

NOTE: The Product Locator Installation Card shown may not be the same as the provided Product Locator card.

Chapter 4

General Procedures and Functional Checks

This chapter provides procedures for quickly checking major functions of the Venue 50 and diagnostics instructions using the built-in service software and power supply adjustments.

Overview

Contents in this chapter

- 'Overview' on *page 4-2*
- 'General procedures' on *page 4-3*
- 'Functional checks' on *page 4-8*

Equipment required

To perform these tests, you'll need any of the sector, linear, or convex transducers. (Normally you should check all the transducers used on the system).

General procedures

WARNING

Energy Control and Power Lockout for Venue 50.

When servicing parts of the Ultrasound system where there is exposure to voltage greater than 30 volts:

1. Follow LOCK OUT/TAG OUT procedures.
2. Turn off the breaker.
3. Unplug the Ultrasound system.
4. Maintain control of the Ultrasound system power plug.
5. Wait for at least 30 seconds for capacitors to discharge as there are no test points to verify isolation.
6. Remove/disconnect the battery, if present.

Ultrasound System components may be energized.

Overview

Some procedures are used more often than other. The intention with this section is to keep the most used procedures in one place.

Power ON/Boot Up

Warnings

ALWAYS CONNECT THE ULTRASOUND SYSTEM TO A FIXED POWER SOCKET WHICH HAS THE PROTECTIVE GROUNDING CONNECTOR.

NEVER USE A THREE-TO-TWO PRONG ADAPTER; THIS DEFEATS THE SAFETY GROUND.

ENSURE THAT THE POWER CORD AND PLUG ARE INTACT AND THAT THE POWER PLUG IS THE PROPER HOSPITAL-GRADE TYPE (WHERE REQUIRED).

Ultrasound system requires all covers.

Operate this Ultrasound system only when all board covers and frame panels are securely in place. The covers are required for safe operation, good Ultrasound system performance and cooling purposes.

Use only power supply cords, cables and plugs provided by or designated by GE.

Connect AC/DC to the Docking Station/Cart

Mount the Venue 50 to the docking station/cart. Connecting AC/DC to the docking station/cart, involves preliminary checks of the power cord, voltage level and compliance with electrical safety requirements.

1. Ensure that the wall outlet is of appropriate type.
2. Uncoil the power cable, allowing sufficient slack so that the docking station/cart can be moved slightly.
3. Verify that the power cable is without any visible scratches or any sign of damage.
4. Verify that the on-site mains voltage is within the limits indicated on the rating label on the system.
5. Connect the Power Cable to the Power Inlet in the docking station/cart.

Figure 4-1. Docking Station AC/DC Connection

6. Connect the Power Cable's other end to a hospital grade mains power outlet with the proper rated voltage, and the unit is ready for Power ON/Boot Up.

Power on

Press Power On/Off key once, the system starts.

Figure 4-2. Power on the Venue 50

Power shut down

NOTE: *After turning off a system, wait at least ten seconds before turning it on again. The system may not be able to boot if power is recycled too quickly.*

Follow these steps to shut down the system:

1. Slightly press the **Power On/Off** switch once.
2. The System-Exit window is displayed.
3. Select **OK**.
4. The shutdown process takes several seconds and the power off sequence is complete when the power status LED is turned off.
5. Disconnect the probes. Clean or disinfect all probes as necessary. Store them in their shipping cases to avoid damage.

DO NOT unplug and/or transport the unit until after the power off sequence has been completed. Failure to do so may result in corrupted patient files.

Adjusting the Display Monitor

See 'Adjust Brightness' on [page 6-3](#) for more information.

Functional checks

Overview

In this section, the functional checks for Venue 50 are described. Functional checks are used to verify that the product works as intended. Functional checks may also be used during troubleshooting.

Touch Panel

The touch panel contains exam function and mode/function specific controls.

| 2. Patient Name, Patient ID | 8. Acoustic Output | 14. Depth scale |
| 3. Storage device status | 9. Gain | 15. Gray/Color bar |
| 4. Battery status | 10. Center line mark | 16. Measurement result window |
| 5. Wireless and local network connection status | 11. Measurement caliper | 17. Cine Gauge |
| 6. Probe and application | 12. Comment | 18. Function controls |

Performance Tests

Before performing the tests, please follow the steps first.

1. Connect one of the probes.
 For available probes, [See 'Available probes' on page 3-54 for more information..](#)
[See 'Connect a probe' on page 3-25 for more information.](#)
2. Turn ON the scanner (if it isn't turned on already).

B Mode Checks

Introduction

B Mode is intended to provide two dimensional images and measurement capabilities concerning the anatomical structure of soft tissue.

Figure 4-5. B Mode Screen

B Mode Controls

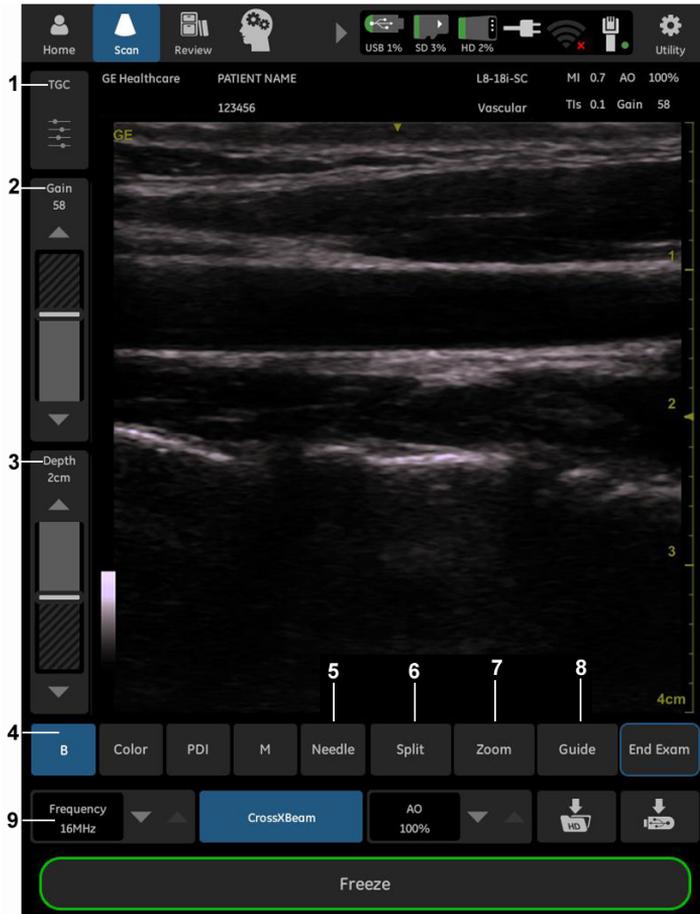

Figure 4-6. B Mode Controls

Table 4-1: B Mode Controls

| Controls | Affect on Image |
|---------------|--|
| TGC | Adjust TGC to balance the image so that the density of echoes is the same throughout the image. |
| Gain | Makes images brighter or darker. |
| Depth | Press to increase or decrease scanning depth. |
| B/Color/PDI/M | Switch to PDI/Color Flow/M mode, different option for different packages. |
| Needle | Press to activate the Needle mode. Gain, Angle and Tilt  can be activated. The needle function only applies to linear probes. Note: Before activating the Needle mode, please make sure to select Interventional preset first. |

Table 4-1: B Mode Controls

| Controls | Affect on Image |
|--|--|
| Split | Press to split the screen into two. |
| Zoom | Press to magnify the region of interest. |
| Guide | Press to display the biopsy guidelines. |
| Configurable Parameters | <ul style="list-style-type: none"> • LiveGain: To balance echo contrast so that cystic structures appear echo-free and reflecting tissue fills in. • Frequency: This optimizes the probe's wide band imaging capabilities at multiple frequencies to image at greater depths. • CrossXBeam: Improve contrast resolution with increased conspicuity of low contrast lesions, better detection of calcifications, biopsy needle visualization, and cystic boundary definition. • Gray Map: Affects the presentation of B Mode information. • Focus Pos: Focus optimizes the image by increasing the resolution for a specific area. • Reverse: Used for anatomical correctness. • ATO Level: Select the Auto Tissue Optimize Level to pick a preference for the contrast enhancement in the resulting image. • Dynamic Range: It is useful for optimizing tissue texture for different anatomy. • Compression: Suppress the noise in the image. • Rejection: Allow for the elimination from the display of low level echoes caused by noise. • Frame Aver: Smooth the image. • SRI HD: Smooth the image when image speckle interferes with the desired image detail • Edge Enhance: Make the image edge clearer/sharper. • FOV: Adjust field of view • AO: Adjust acoustic output |
| <p>Note: The configurable parameters can be configured in Utility->Settings->ScanConfig.</p> | |

Color Flow Mode Checks

Introduction

Color Flow Mode is a Doppler Mode intended to add color-coded qualitative information concerning the relative velocity and direction of fluid motion within the B-Mode image.

Figure 4-7. Color Flow Mode Screen

Color Flow Mode Controls

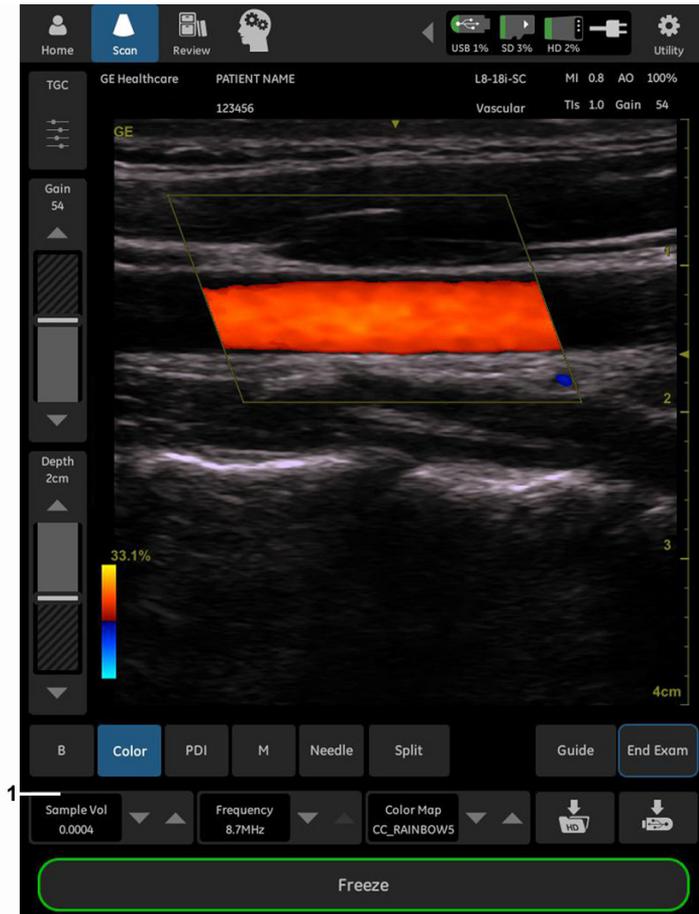

Figure 4-8. Color Flow Mode Controls

Table 4-2: CF Mode Controls

| Controls | Affect on Image |
|---|---|
| Configurable Parameters | <ul style="list-style-type: none"> • Scale: Imaging of higher velocity flow requires increased scale values to avoid aliasing. • Threshold: Limit color flow overlay to low level echoes inside vessel walls. Help to minimize color 'bleeding' outside vessel walls. • Sample Vol: Place the sample volume gate to sample blood flow. • Steer: Provide a doppler cursor angle suitable for linear probe orientation. • Wall Filter: Decrease, unnecessary low frequency signals caused by motion. • Color Map: Show the direction of the flow and highlight the higher velocity flows. • Invert: Allow to view blood flow according to personal preference, without flipping the probe. |
| See Table 4-1 for more information. | |

Power Doppler Imaging Mode Checks

Introduction

Power Doppler Imaging (PDI) is a color flow mapping technique used to map the strength of the Doppler signal coming from the flow rather than the frequency shift of the signal.

Figure 4-9. Power Doppler Imaging Mode Screen

Power Doppler Imaging Mode Controls

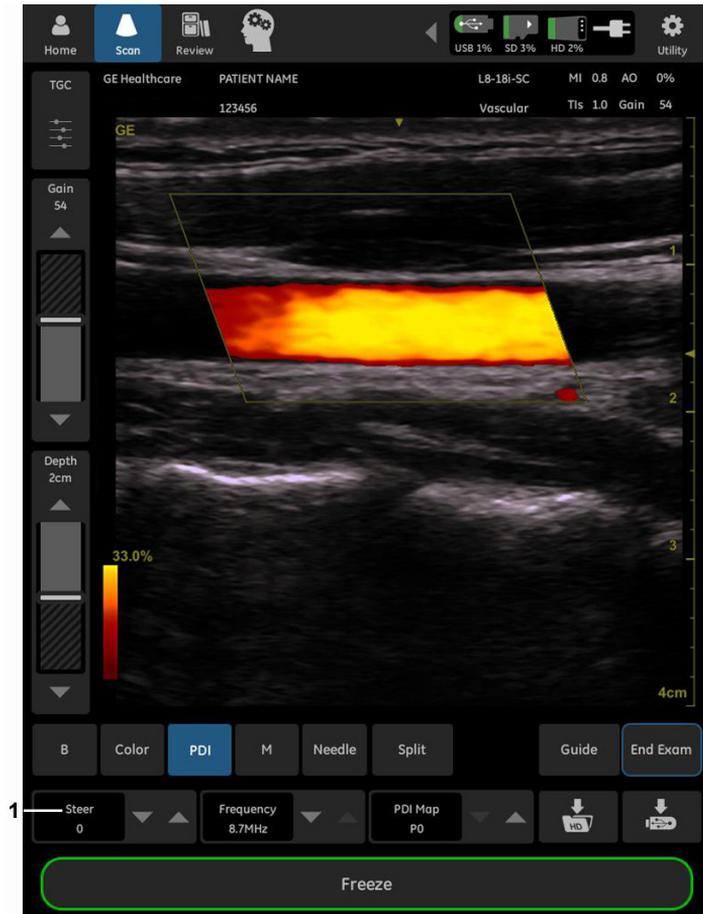

Figure 4-10. Power Doppler Imaging Mode Controls

Table 4-3: PDI Mode Controls

| Controls | Affect on Image |
|---|---|
| Configurable Parameters | <ul style="list-style-type: none"> • PDI Map: Show the power of the flow and highlight the stronger power flows. |
| See Table 4-1 and Table 4-2 for more information. | |

M Mode Checks

Introduction

M Mode is intended to provide a display format and measurement capability that represents tissue displacement (motion) occurring over time along a single vector.

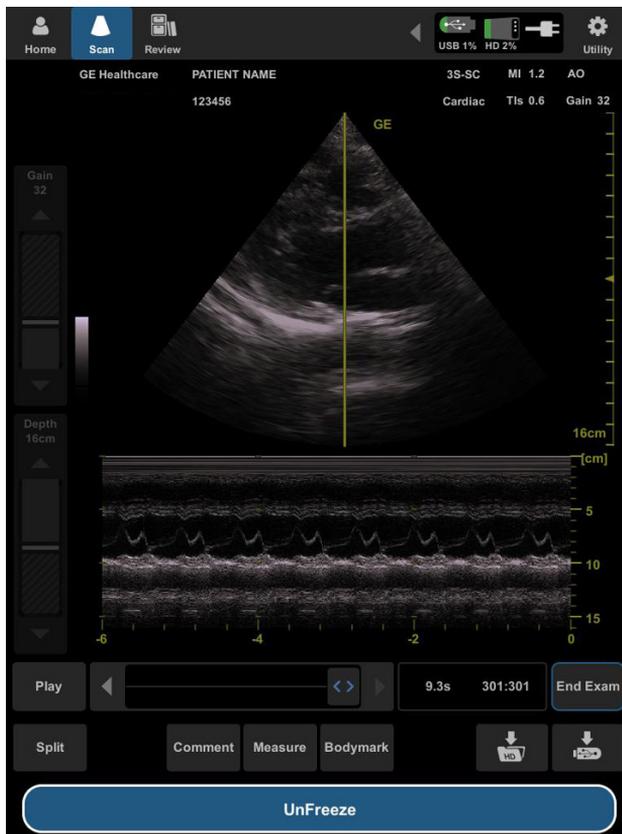

Figure 4-11. M Mode Screen

M Mode Controls

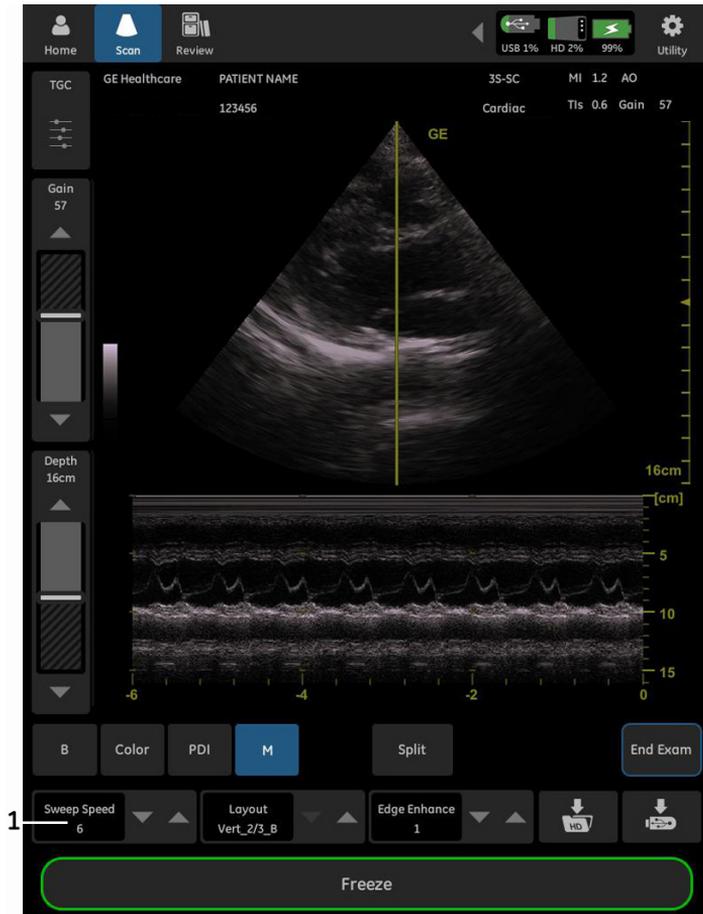

Figure 4-12. M Mode Controls

Table 4-4: M Mode Controls

| Controls | Affect on Image |
|---|--|
| Configurable Parameters | <ul style="list-style-type: none"> • Sweep Speed: Change the speed of the timeline. • Layout: Change the Horizontal/Vertical layout between B Mode and M Mode. |
| See Table 4-1 for more information. | |

Basic Measurements

*NOTE: The following instructions assume that you first scan the patient and then press **Freeze**.*

Distance Measurements

1. Press **Measure**.
2. Select **Distance**.
3. Touch the screen, and two active calipers display.
4. Move the calipers to the desired position.
5. Press **Set**, then the value is displayed in the results window.

Circumference/Area (Ellipse) Measurement

1. Press **Measure**.
2. Select **Ellipse**.
3. Touch the screen, and three active calipers display.
4. Move the calipers to the desired position.
5. Press **Set**, then the value is displayed in the results window.

M Mode Measurements

1. Press **Measure**.
2. Select **Depth** or **Heart Rate**.
3. Touch the screen and two active calipers display.
4. Move the calipers to the desired position.
5. Press **Set**, then the value is displayed in the results window.

Probe/Connectors Check

NOTE: Probes can be connected at any time, whether the unit is ON or OFF

Connecting a Probe

See 'Connect a probe' on page 3-25 for more information.

Activating the probe

The probe activates in the currently-selected operating mode. The probe's default settings for the mode and selected exam are used automatically.

Deactivating the probe

When the probe is deactivated, it is automatically placed in standby mode.

1. Press **Freeze**.
2. Gently wipe the excess gel from the face of the probe. (Refer to the Basic User Manual for complete probe cleaning instructions).
3. Carefully put the probe to the probe holder.

Disconnecting the probe

Probes can be disconnected at any time. However, the probe should not be selected as the active probe.

See 'Disconnect a probe' on page 3-27 for more information.

Take the following precautions with the probe cables: Do not bend. If you have purchased the cart option, be sure to keep probe cables free from the wheels.

Be careful not to trip on the probe cables if using the device without the optional cart.

Cineloop Check

Introduction

A cineloop is a sequence of images recorded over a certain time frame. You can view cine as a continuous loop via cine loop or manually review cine images frame by frame. Data in cine is available until new data is acquired. Cine can be archived in the storage device.

Activating CINE

Press **Freeze** to activate CINE. To start CINE Loop playback, press **Play/Pause**. To stop CINE Loop playback, press **Play/Pause**.

Moving through a CINE Loop Frame By Frame

Press < or > to move through CINE memory one frame at a time.

Image Management

For Image Management functionality refer to the Venue 50 User Manual. It talks about several topics:

- Zooming an Image
- Split Screen
- Using Cine
- Review Archived Information
- Image Storage
- eSmart Trainer (Option)

Software Configuration Checks

Table 4-5: Software Configuration Checks

| Step | Task to do | Expected Result(s) |
|-------------|---|--------------------------------------|
| 1. | Check Date and Time setting | Date and Time are correct |
| 2. | Check that Location (Hospital Name) is correct | Location Name is correct |
| 3. | Check Language settings | Desired Language is displayed |
| 5. | Check that all of the customer's options are set up correct | All authorized functions are enabled |

Peripheral Checks

This section describes the final setup for the Peripherals and the Operational Check-out. For Peripherals installation information, See ['Peripherals Connection'](#) on [page 3-35](#) for *more information*.

Check that peripherals work as described below:

SD Card Checks

Table 4-6: SD Card Checks

| Step | Task to do | Expected Result(s) |
|------|---|--|
| 1. | Insert SD card to the SD card socket on top of the system. | The storage device status icon will display the SD Card capacity on top of the screen. |
| 2. | Press Utility->Connectivity->Dataflow, configure SD card as D1 or D2. | The SD card icon will be shown on the Dataflow Button. |
| 3. | Press Dataflow Button with SD Card Icon to store the patient information. | The patient information is stored to the SD Card. |

USB Memory Stick Checks

Table 4-7: USB Memory Stick Checks

| Step | Task to do | Expected Result(s) |
|------|--|---|
| 1. | Connect USB Memory Stick to the USB port on top of the system or to Docking Station/ Cart. | The storage device status icon will display the USB Memory Stick capacity on top of the screen. |
| 2. | Press Utility->Connectivity->Dataflow, configure USB Memory Stick as D1 or D2. | The USB Memory Stick icon will be shown on the Dataflow Button. |
| 3. | Press Dataflow Button with USB Memory Stick Icon to store the patient information. | The patient information is stored to the USB Memory Stick. |

B/W Printer Checks

Table 4-8: B/W Printer Checks

| Step | Task to do | Expected Result(s) |
|------|---|--|
| 1. | Connect Printer to Docking Station/Cart, then plug power cord into wall outlet. Power on the printer. | The printer is powered on. |
| 2. | Press Utility->Connectivity->Dataflow, configure Printer as D1 or D2. | The Printer icon will be shown on the Dataflow Button. |
| 3. | Press Dataflow Button with Printer Icon to print the images. | The images are printed. |

Wireless Network Card Checks

Table 4-9: Wireless Network Card Checks

| Step | Task to do | Expected Result(s) |
|------|--|--|
| 1. | Connect the wireless network card to the USB port. | |
| 2. | Press Utility->Connectivity->Wireless. | |
| 3. | Connect to the desired wireless network. | The wireless network status icon will display as "Connected" or "Conncting" on the screen. |

Footswitch Checks

Table 4-10: Footswitch Checks

| Step | Task to do | Expected result(s) |
|------|---|--|
| 1. | Connect the footswitch to the USB port. | |
| 2. | Configure footswitch in Utility->Settings->USB Accessories. | |
| 3. | Press the configured pedal of the footswitch. | The system will respond as the configured function for the footswitch. |

Barcode Reader Checks

Table 4-11: Barcode Scanner Checks

| Step | Task to do | Expected result(s) |
|------|--|--|
| 1. | Connect Barcode Scanner to the USB port. | |
| 2. | Activate Barcode Reader in Utility->Settings->USB Accessories. | |
| 3. | Scan barcode. | A beep should be heard and the patient information will be shown on the Home screen. |

Chapter 5

Components and Functions (Theory)

This chapter explains Venue 50's system concepts, component arrangement, and subsystem functions.

It also describes the power distribution system and probes.

Overview

Contents in this chapter

- 'Overview' on *page 5-2*
- 'Block Diagram and Theory' on *page 5-3*

Block Diagram and Theory

Block Diagram of Venue 50 and Docking Station/Cart

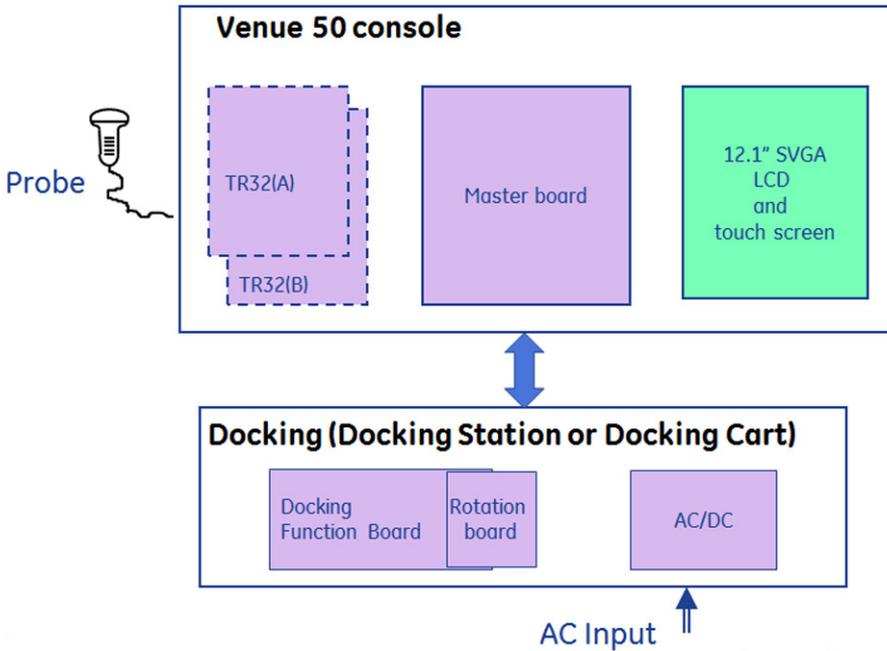

Figure 5-1. Venue 50 and Docking Station System Block Diagram

Chapter 6

Service Adjustments

This chapter describes how to test and make adjustments to the Venue 50. You can use these to test the system for errors.

Overview

Contents in this chapter

- 'Overview' on *page 6-2*
- 'Monitor Adjustments' on *page 6-3*

Monitor Adjustments

Adjust Brightness

To adjust the brightness:

1. Press **Utility->Settings->Common**, then choose the desired brightness in the **Brightness** select box.

Adjust Volume

To adjust the volume:

1. Press **Utility->Settings->Miscellaneous**, then choose the desired volume in the **Volume** select box.

Adjust Monitor on Docking Station/Cart

To adjust the monitor on Docking Station/Cart:

1. Tilt the LCD monitor for the optimum viewing angle. The maximum angle is 45 degrees.

Figure 6-1. Tilt the LCD monitor

Adjust Monitor on Docking Station/Cart (continued)

To adjust the height of Docking Cart:

1. Hold the cart handle by both hands, step on the pedal, push down or lift to adjust the height.

Figure 6-2. Cart height adjustment

Adjust Monitor on Docking Station/Cart (continued)

Be sure to lock the wheels before adjusting the Docking Cart height.

When the cart handles are used for power cable management, the sudden raising of the cart to a higher position may cause the AC plug to break.

When adjusting the cart while scanning, the power cord and wheels may become entangled causing cable damage.

Damage to the probe cable may result if the brake pedal catches the cable and pulls it tight against the base leg. This puts stress on the probe and connector while in the holder.

Chapter 7

Troubleshooting

This chapter describes how to setup and run the tools and software that help maintain image quality and system operation. Very basic host, system and board levels are run whenever power is applied. Some Service Tools may be run at the application level.

Contents in this chapter

Gateway Installation

Preparations

Before installing the gateway, please assure that the computer meets the minimum requirements listed in the table below.

Table 7-2: Minimum Requirements for the computer

| Item | Minimum Requirements |
|-----------------|---|
| OS | Windows XP Professional SP3 Windows Vista Windows 7 32-bit and 64-bit versions are supported. Windows 7 running in VMware Virtualization Software on Mac OS X 10.6 is supported. |
| CPU | Pentium 4 (2.4GHz) or Pentium M (1.6GHz) |
| RAM | 1GB |
| Disk space | 1000MB on system partition 200MB on partition where program is installed |
| Graphic | DirectX 9c compatible display adapter such as: <ul style="list-style-type: none"> • NVIDIA GeForce 6 Series or later • AMD/ATI X1000 series or later (or Radeon R520 or later) • Inter GMA X3000 series or later Min. resolution: 1024x768 |
| Ports | At least on USB port or SD Card Reader available |
| pointing device | Mouse with left and right buttons |
| Alphanumeric | Keyboard required |
| Network | Wired or Wireless network connection required |

Installation Procedure

The software upgrade SDHC card contains the software Gateway. Please follow the steps to install the Gateway.

NOTE: *When installing Venue Gateway software to a computer, the gateway installer will add some items to registry and also create some shortcuts. If anti-virus software or some other software pops up tips about these actions, please allow our installer to do the changes, otherwise Venue Gateway software may not work properly.*

1. Insert the software upgrade SDHC card to the computer and double click the corresponding drive.
2. Double click **Setup.exe**. The screen is displayed as below. Press **Next**.

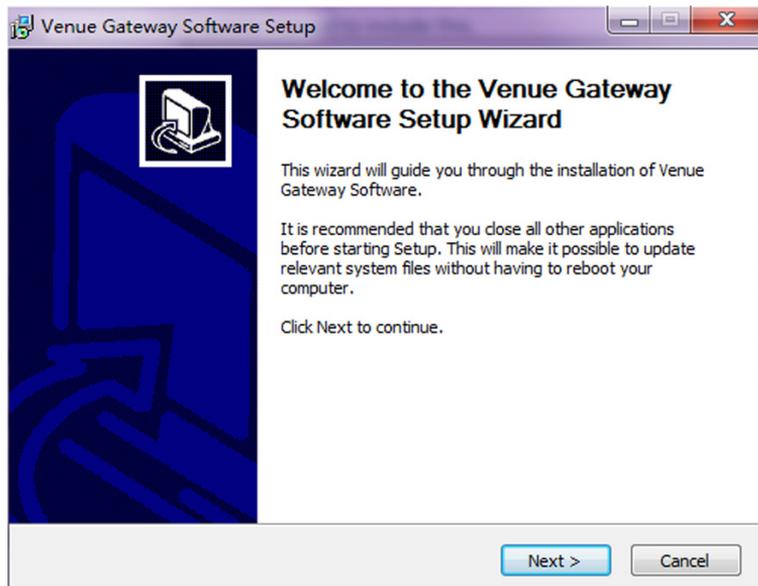

Figure 7-17. Installation Setup

Installation Procedure (continued)

3. If the computer does not meet the minimum requirements in Table 7-2, the screen is displayed as below. Press **Install All**. After all requirements are installed, press **Next**.

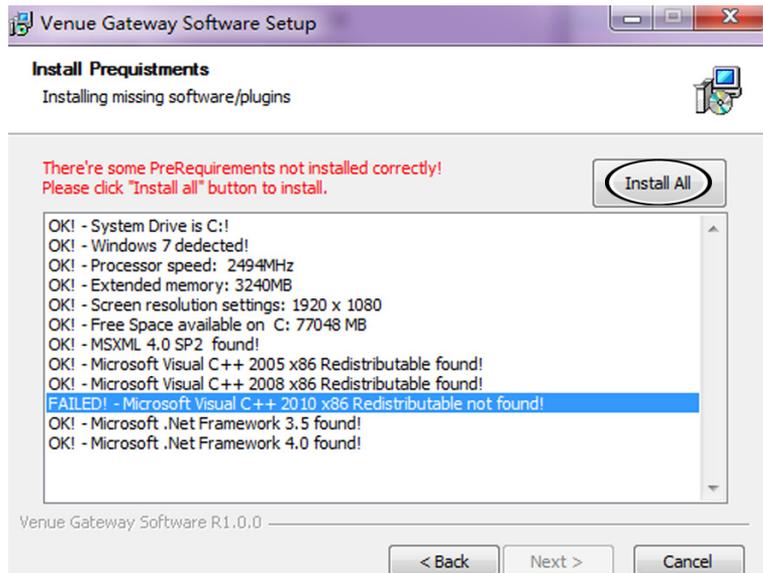

Figure 7-18. Install All

4. When the screen is displayed as below, press **Install**.

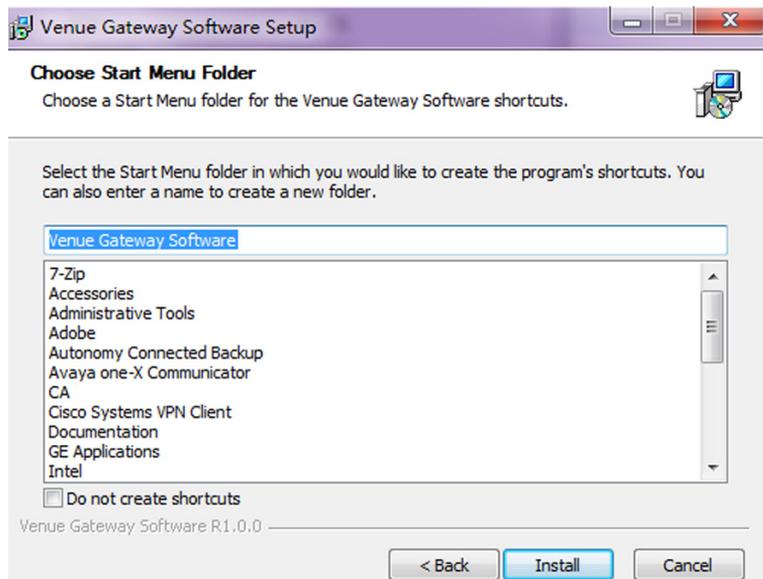

Figure 7-19. Install the software

Installation Procedure (continued)

- When the installation procedure begins, the screen is displayed as below.

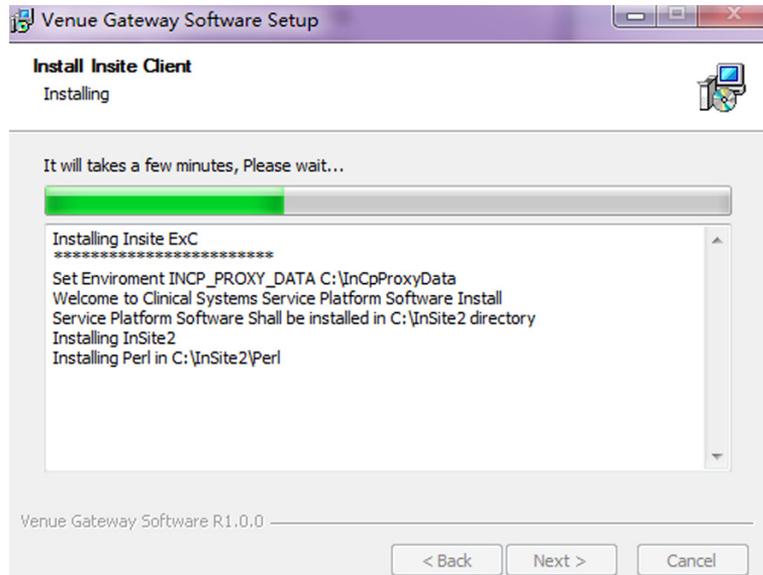

Figure 7-20. Installation Procedure

- When the installation procedure completes, the screen is displayed as below. Press **Next**.

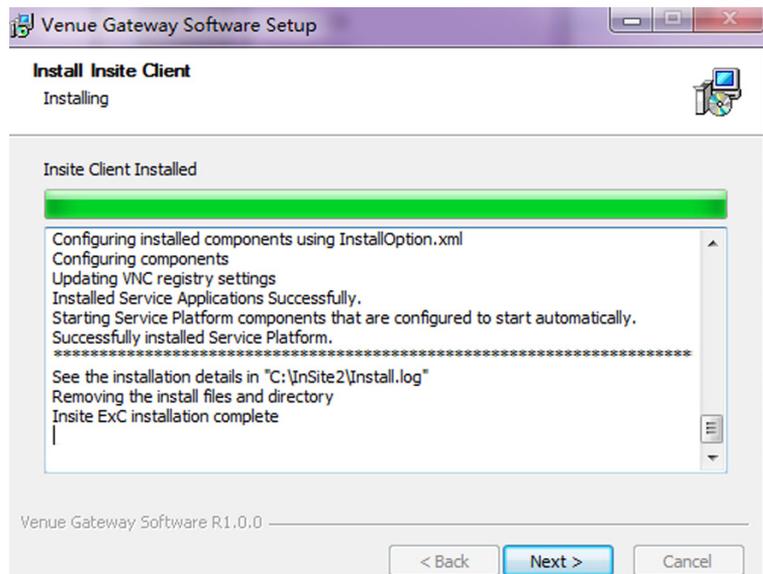

Figure 7-21. Installation Completed

Installation Procedure (continued)

7. When the screen is displayed as below, press **Finish** to reboot the computer.

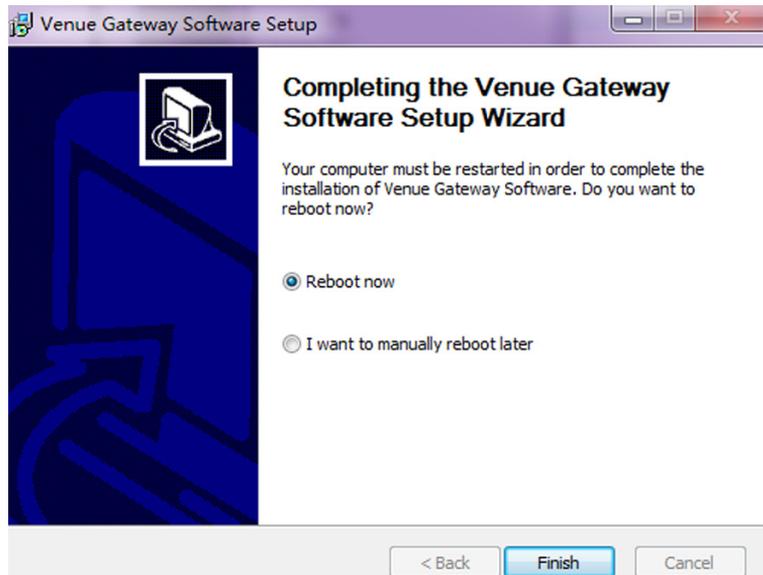

Figure 7-22. Reboot the computer

Gateway Running

Preparations

Please follow the steps below to do some configuration when the Gateway is used for the first time.

NOTE: *When you are following the steps below, please read the directions shown on the screen carefully.*

1. Double click the Venue Gateway Software icon in the customer PC.
2. Input the Serial Number of Venue device into the field. Then press **Next**.

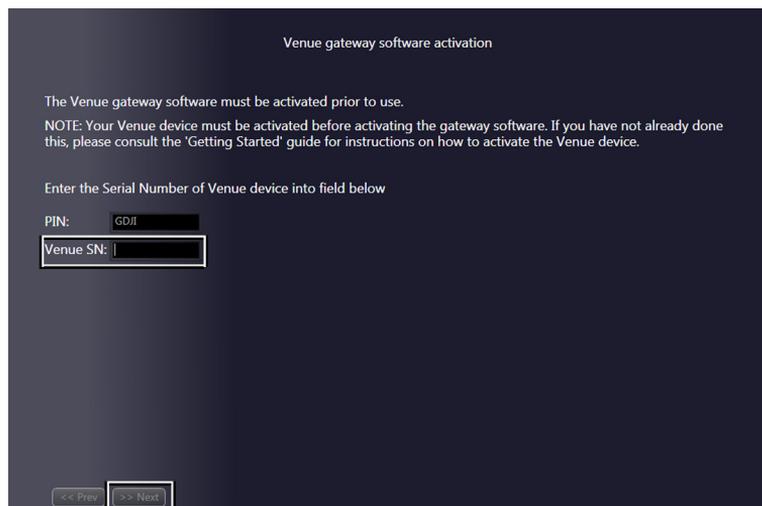

Figure 7-23. Input Venue SN

3. Press **Configure** to open the Insite Service Platform.

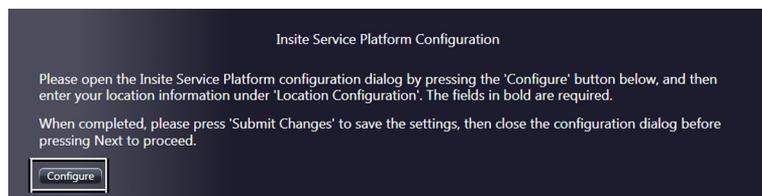

Figure 7-24. Press Configure

Preparations (continued)

- 4. Input the corresponding information. The fields in bold are required. Then press **Submit Changes**.

NOTE: **Device Name** and **CRM No.** are automatically filled in. Do not need to modify the information.

NOTE: The operator does not need to modify the fields in **Advanced Configuration**.

The screenshot shows the 'InSite ExC Configuration Tool' window. It is divided into three main sections: 'Agent Configuration', 'Advanced Configuration', and 'Proxy Configuration'.
1. **Agent Configuration:** Fields include 'Device Name' (SGD_239571VGBL), 'CRM No.' (239571VGBL), 'Display Name', 'Description', 'Continent' (dropdown), 'Country' (dropdown), 'Addr Line1', 'Addr Line2', 'City', 'State (Prov)', 'Postal Code', 'Latitude', 'Longitude', 'Institution', 'Department', 'Building', 'Floor', and 'Room'.
2. **Advanced Configuration:** Fields include 'Enterprise Server' (PRODUC), 'Service Center' (OTHERS), 'Log Level' (WARN), 'Enterprise Server URL' (https://us0-ws.service.gehealthcare.com:443), 'Enterprise Tunnel URL' (https://us0-rd.service.gehealthcare.com:443), 'File Repository' (C:\InSite2\Questra\GeHealthcare\Agent\etc), 'File Watcher' (Disable), 'Dir' (C:\InSite2\Export), and 'Filter' (*.*).
3. **Proxy Configuration:** Fields include 'Proxy' (Disable), 'Name' (Proxy Disabled), 'IP Addr', 'Port', 'Proxy Authentication' (Disable), 'Scheme' (NONE), 'Proxy User', and 'Password'.
At the bottom, there are two buttons: 'Submit Changes' (circled in red) and 'Reset Form'.

Figure 7-25. Insite Service Platform Configuration

Preparations (continued)

5. When the configuration is saved. Press **OK**. Then close the configuration screen.

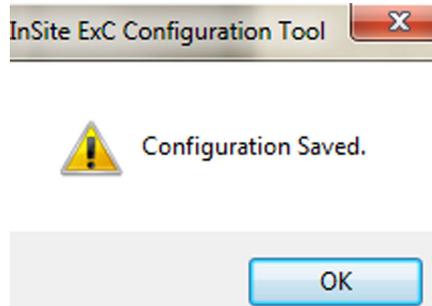

Figure 7-26. Configuration Saved

6. Press **Next** to run the Gateway.

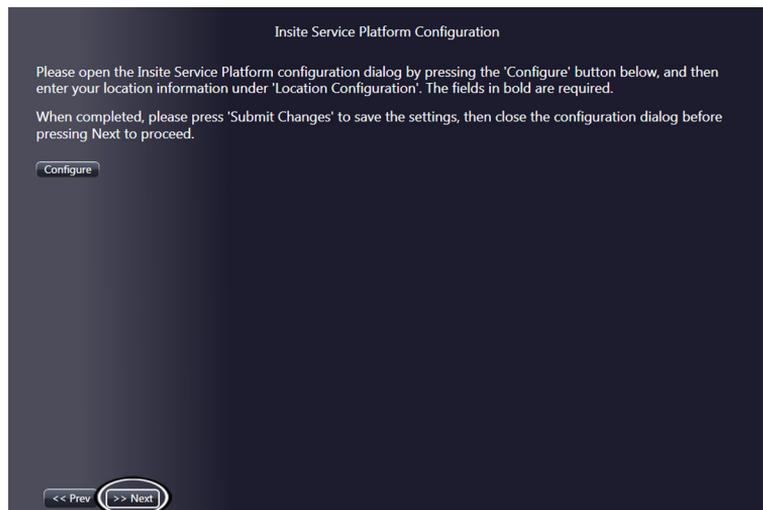

Figure 7-27. Run Gateway

Gateway Running Procedure

1. Run Gateway by double clicking **Gateway** in the customer PC.

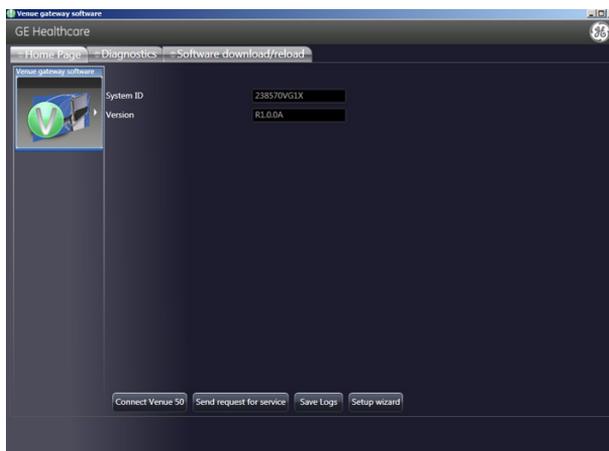

Figure 7-28. Run Gateway

2. Select **Start Remote Desktop Service** at the lower right corner.

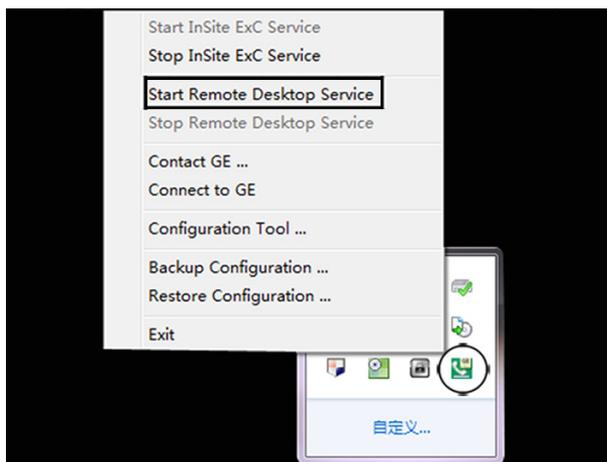

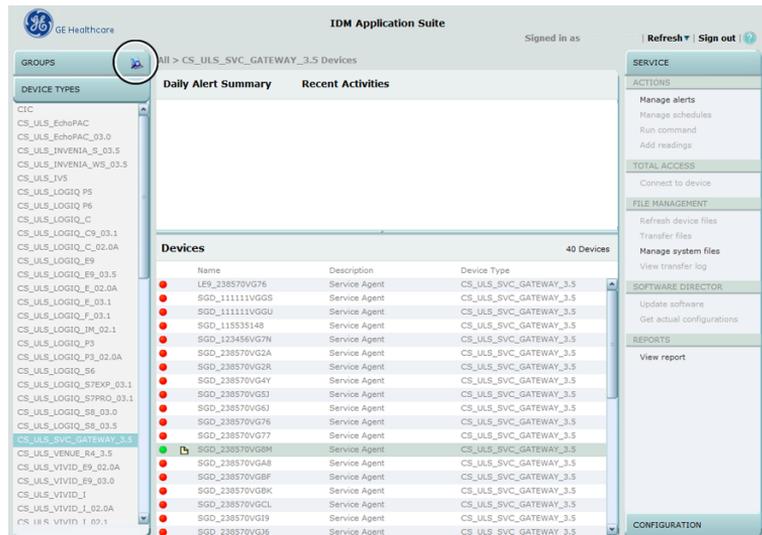

Figure 7-29. Start Remote Desktop Service

Remote Software Download/Reload

To download/reload the software packages, please follow the steps as below:

1. Access to <https://insite2.health.ge.com/qss/gelogin.jsp>.
2. Select **Device Type**, find the customer PC. Or click **Search** , then input some information to find the customer PC.

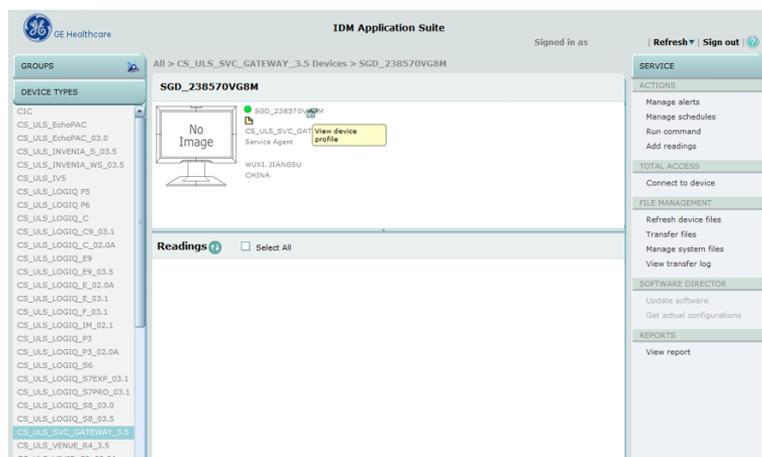

NOTE: You may review and check if the customer PC is the right one by click **Device Profile Dialog Icon**.

The screenshot shows the 'IDM Application Suite' interface. The left sidebar lists 'DEVICES TYPES' with 'CS_ULS_SVC_GATEWAY_3.5' selected. The main area displays a 'Daily Alert Summary' and 'Recent Activities' section, followed by a 'Devices' table with 40 entries. The table columns are Name, Description, and Device Type. The entry 'SGD_238570VG8M' is highlighted in green. The right sidebar contains sections for SERVICE, FILE MANAGEMENT, SOFTWARE DIRECTOR, REPORTS, and CONFIGURATION.

| Name | Description | Device Type |
|----------------|---------------|------------------------|
| LE9_238570VG76 | Service Agent | CS_ULS_SVC_GATEWAY_3.5 |
| SGD_111111VGG5 | Service Agent | CS_ULS_SVC_GATEWAY_3.5 |
| SGD_111111VGGU | Service Agent | CS_ULS_SVC_GATEWAY_3.5 |
| SGD_125535148 | Service Agent | CS_ULS_SVC_GATEWAY_3.5 |
| SGD_123456VG7N | Service Agent | CS_ULS_SVC_GATEWAY_3.5 |
| SGD_238570VG2A | Service Agent | CS_ULS_SVC_GATEWAY_3.5 |
| SGD_238570VG2R | Service Agent | CS_ULS_SVC_GATEWAY_3.5 |
| SGD_238570VG4Y | Service Agent | CS_ULS_SVC_GATEWAY_3.5 |
| SGD_238570VG5J | Service Agent | CS_ULS_SVC_GATEWAY_3.5 |
| SGD_238570VG6J | Service Agent | CS_ULS_SVC_GATEWAY_3.5 |
| SGD_238570VG76 | Service Agent | CS_ULS_SVC_GATEWAY_3.5 |
| SGD_238570VG77 | Service Agent | CS_ULS_SVC_GATEWAY_3.5 |
| SGD_238570VG8M | Service Agent | CS_ULS_SVC_GATEWAY_3.5 |
| SGD_238570VG8B | Service Agent | CS_ULS_SVC_GATEWAY_3.5 |
| SGD_238570VGBF | Service Agent | CS_ULS_SVC_GATEWAY_3.5 |
| SGD_238570VGBK | Service Agent | CS_ULS_SVC_GATEWAY_3.5 |
| SGD_238570VGCL | Service Agent | CS_ULS_SVC_GATEWAY_3.5 |
| SGD_238570VG19 | Service Agent | CS_ULS_SVC_GATEWAY_3.5 |
| SGD_238570VG36 | Service Agent | CS_ULS_SVC_GATEWAY_3.5 |

Figure 7-30. Search Customer PC

The screenshot shows the 'IDM Application Suite' interface with the device profile for 'SGD_238570VG8M' selected. The main area displays a 'No Image' placeholder, the device name 'SGD_238570VG8M', description 'Service Agent', and location 'WUXI, JIANGSU, CHINA'. A 'View device profile' button is visible. The left sidebar shows the 'DEVICES TYPES' list with 'CS_ULS_SVC_GATEWAY_3.5' selected. The right sidebar contains sections for SERVICE, FILE MANAGEMENT, SOFTWARE DIRECTOR, REPORTS, and CONFIGURATION.

Figure 7-31. View Device Profile

Remote Software Download/Reload (continued)

- To upload the software to the website, select the customer PC, press **Manage System Files**, select My File, click + to select the desired software package, press **Upload**. The software package is uploaded to the website.

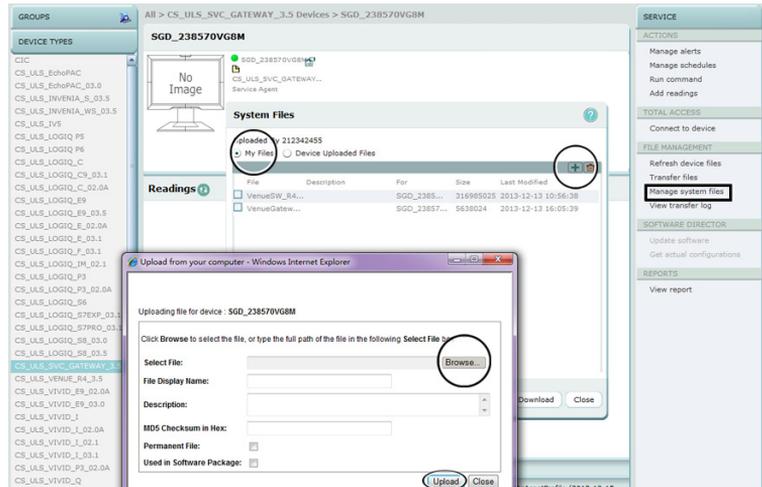

Figure 7-32. Upload the software package

- To download the software from the website to the customer PC, go to **Transfer File** -> **System File** to find the desired software package, then input **/SWInput** to the target directory path.

NOTE: *The download process will take some time. Please press **View Transfer Log** to check if the software has been downloaded successfully.*

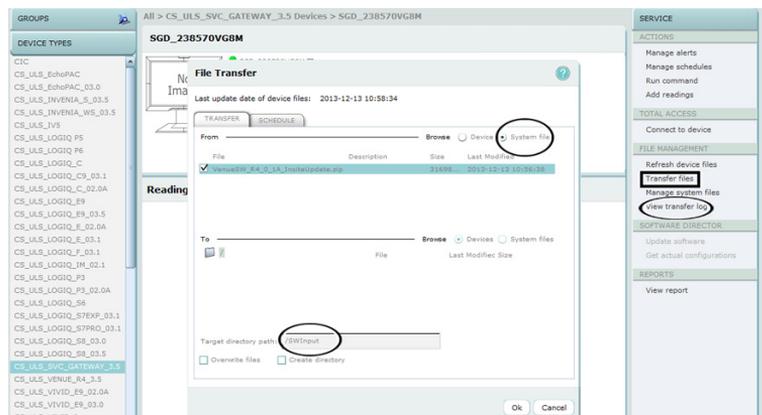

Figure 7-33. Download the software package

Remote Software Download/Reload (continued)

5. Select **Connect to device**. Click **Connect**, **OK**, **OK**, then the customer PC screen will show.

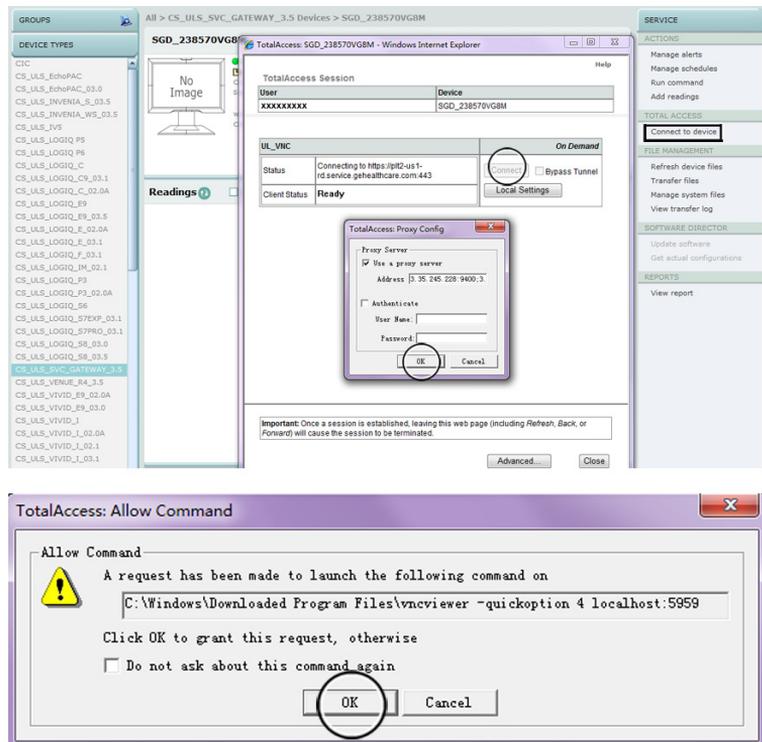

Figure 7-34. Connect to Customer device

Remote Software Download/Reload (continued)

6. Go to **Homepage->Venue Gateway Software->Connect Venue 50**, then input the Console IP Address and click **Ok**.

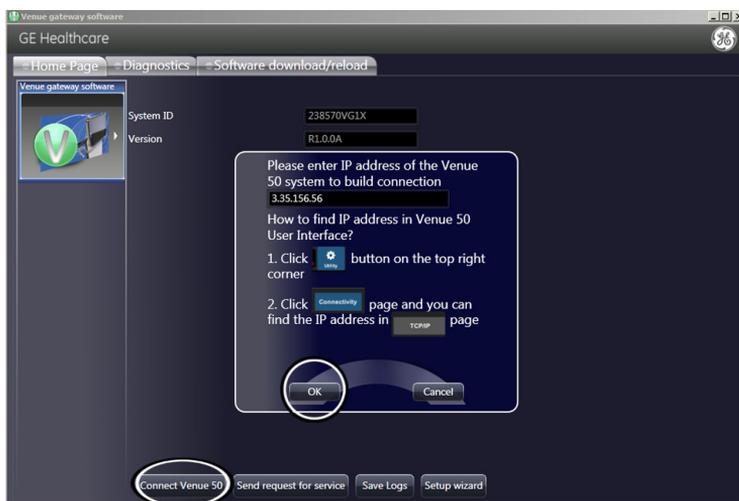

Figure 7-35. Input Scanner IP

7. When the figure below appears, press **OK**.

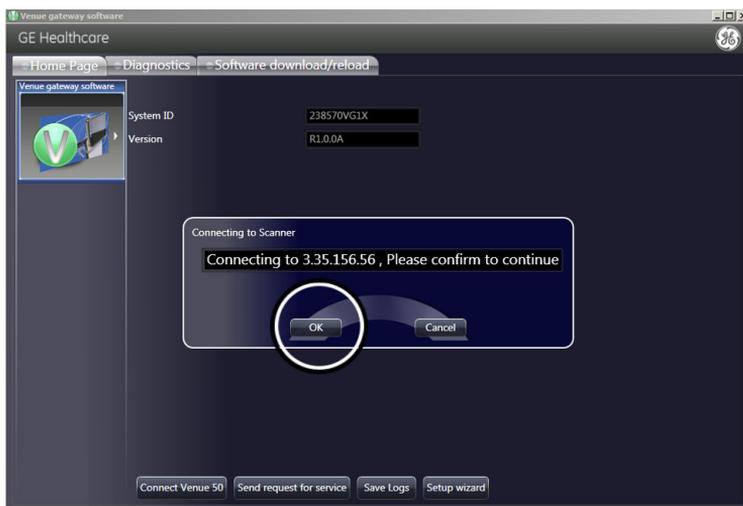

Figure 7-36. Connect to Scanner

Remote Software Download/Reload (continued)

- The customer press **OK** on the console.

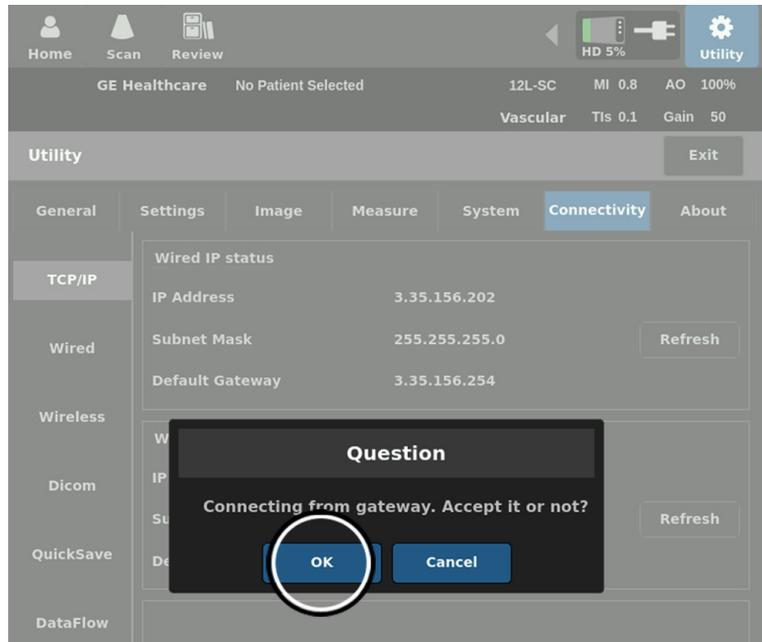

Figure 7-37. Scanner Connected

NOTE: Press **OK** as soon as possible once the box appears.

- When the figure below appears, press **OK**. Then the customer PC is connected to the console.

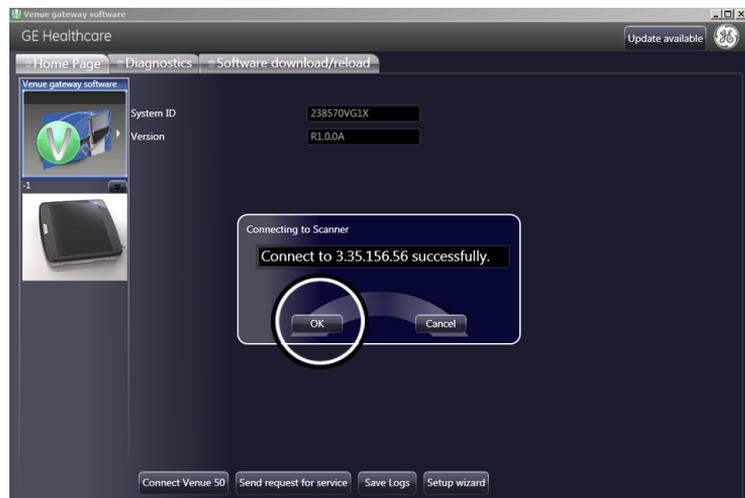

Figure 7-38. PC Connected

Remote Software Download/Reload (continued)

10. Press **Software download/reload**, select the console, select the desired software package, press **Install / Reinstall**. When a dialogue box appears, press **OK**.

Figure 7-39. Software Installed

11. When the figure below appears on the scanner, press **OK** to receive package. The installation process begins.

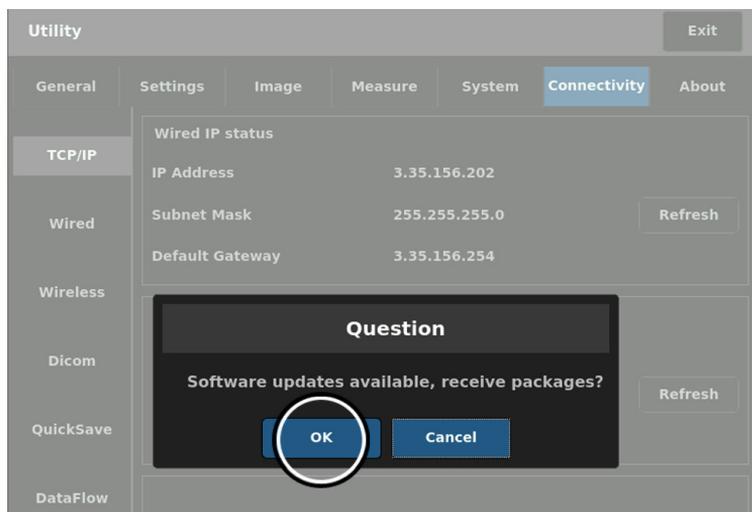

Figure 7-40. Installation Process

Remote Software Download/Reload (continued)

12. After the installation process is completed, a dialogue box will appear on the PC screen. Press **OK**.

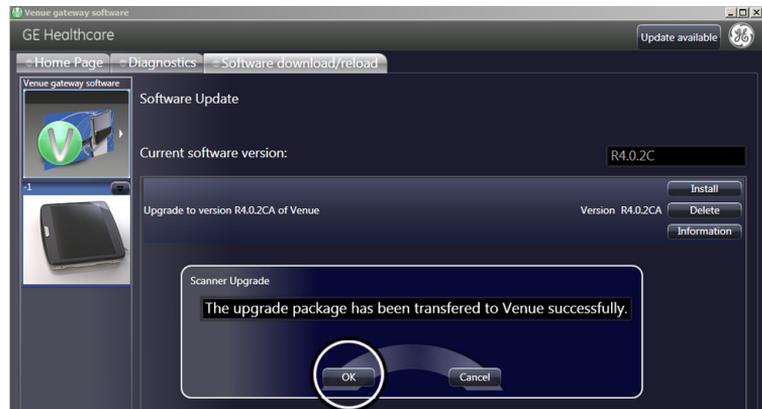

Figure 7-41. Installation Completed

13. After the installation process is finished, a dialogue box will appear on the scanner. Press **OK** to shut down the system. Reboot to upgrade the system.

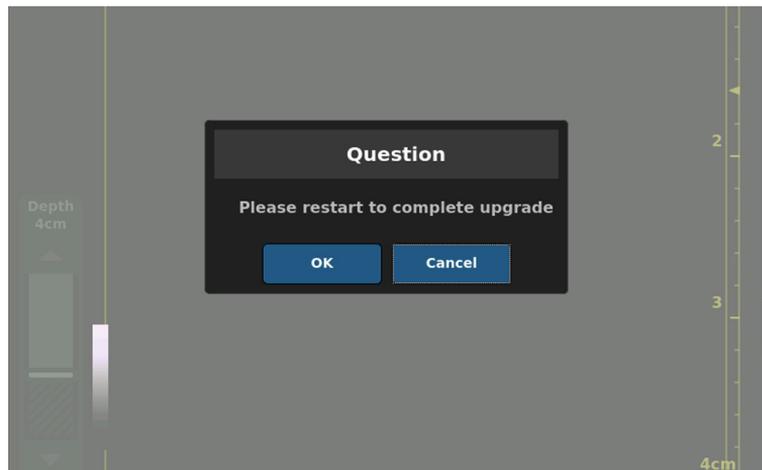

Figure 7-42. System Shutdown

Remote Diagnostics

To diagnose the customer console, please follow the steps as below:

1. Access to <https://insite2.health.ge.com/qss/gelogin.jsp>.
2. Select **Device Type**, find the customer PC. Or click **Search** , then input some information to find the customer PC.

NOTE:

*You may review and check if the customer PC is the right one by click **Device Profile Dialog Icon**.*

3. Select **Connect to device**. Click **Connect**, **OK**, **OK**, then the customer PC screen will show.
4. Go to **Homepage**->**Venue Gateway Software**->**Connect Venue 50**, then input the Console IP Address and click **Ok**. The customer press **OK** on the console. Then the customer PC is connected to the console.
5. Press **Diagnostics**, select the console, then press **Run All Diagnostics** or select the desired test and press **Run Diagnostics**. The summary will show on the screen.

Figure 7-43. Diagnostics Screen

Remote Log

To get the log from the customer console, please follow the steps as below:

1. Access to <https://insite2.health.ge.com/qss/gelogin.jsp>.
2. Go to **Transfer Files** -> **Device** -> **DevLog** -> the customer console name, select log file and press **OK**.

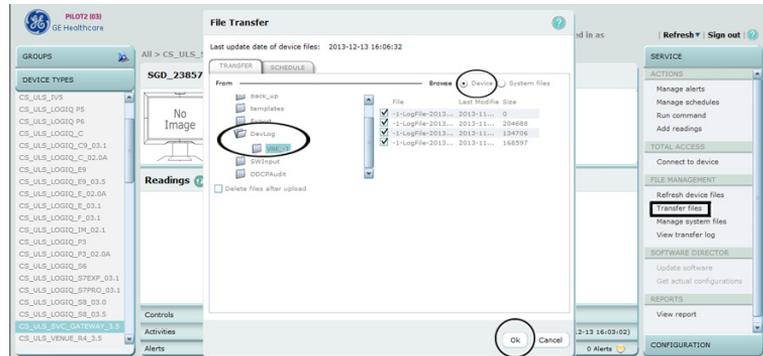

Figure 7-44. Log Screen

Chapter 8

Replacement Procedures

This chapter describes how to remove and install, or replace, modules and subsystems in the Venue 50. It also includes instructions for installing and re-installing the software.

Overview

Contents in this chapter

- 'Overview' on *page 8-2*
- 'Warnings and important information' on *page 8-3*
- 'Disassembly/Re-assembly' on *page 8-6*
- 'Loading Base Image Software' on *page 8-13*
- 'Used Media and Used Parts Disposal' on *page 8-23*

Warnings and important information

Warnings

Energy Control and Power Lockout for Venue 50.

When servicing parts of the Ultrasound system where there is exposure to voltage greater than 30 volts:

1. Follow LOCK OUT/TAG OUT procedures.
2. Turn off the breaker.
3. Unplug the Ultrasound system.
4. Maintain control of the Ultrasound system power plug.
5. Wait for at least 30 seconds for capacitors to discharge as there are no test points to verify isolation.
6. Remove/disconnect the battery, if present.

Ultrasound System components may be energized.

Because of the limited access to cabinets and equipment in the field, placing people in awkward positions, GE has limited the lifting weight for one person in the field to 16 KG (35 LBS). Anything over 16 KG (35 LBS) requires 2 people.

Warnings (continued)

DO NOT touch any boards with integrated circuits prior to taking the necessary ESD precautions.

Follow general guidelines for handling of electrostatic sensitive equipment.

NOTE: Use an ESD compatible work space or the ESD-kit during parts replacement.

The waste of electrical and electronic equipment must not be disposed as unsorted municipal waste and must be collected separately.

Please contact the manufacturer or other authorized disposal company to decommission your equipment.

Returning/shipping probes and repair parts

Equipment being returned must be clean and free of blood and other infectious substances.

GE policy states that body fluids must be properly removed from any part or equipment prior to shipment. GE employees, as well as customers, are responsible for ensuring that parts/equipment have been properly decontaminated prior to shipment. Under no circumstance should a part or equipment with visible body fluids be taken or shipped from a clinic or site (for example, body coils or an ultrasound probe). The purpose of the regulation is to protect employees in the transportation industry, as well as the people who will receive or open this package.

NOTE: *The US Department of Transportation (DOT) has ruled that “items that were saturated and/or dripping with human blood that are now caked with dried blood; or which were used or intended for use in patient care” are “regulated medical waste” for transportation purposes and must be transported as a hazardous material.*

If the Venue 50 needs to be sent for repair, ensure that any patient information is erased from the storage device, or that the storage device is removed from the Venue 50 before shipping. In case that any patient information is still residing on the Venue 50, GE will contact the customer and request for urgent collection of that patient information. GE will keep this patient information in a secure environment for a maximum period of 1 month. All patient information will be permanently deleted at that point.

If PHI (Patient Healthcare Information) data needs to be sent to GE employees for service purposes, GE will ascertain agreement from the customer. The patient information shall only be transferred by approved service processes, tools and devices restricting access, protecting or encrypting data where required, and providing traceability in the form of paper or electronic documents at each stage of the procedure while maintaining compliance with cross-border restrictions of patient information.

Disassembly/Re-assembly

Warning and Caution

ONLY QUALIFIED SERVICE PERSONNEL SHOULD REMOVE ANY COVERS OR PANELS. ELECTRICAL HAZARDS EXISTS AT SEVERAL POINTS INSIDE. BECOME THOROUGHLY FAMILIAR WITH ALL HAZARDOUS VOLTAGES AND HIGH CURRENT LEVELS TO AVOID ACCIDENTAL CONTACT

Do not wear the ESD wrist strap when you work on live circuits and more than 30V peak is present.

Tools needed for servicing Venue 50

Table 8-1: Standard tools list for Venue 50

| No | Part Name | Part No. | QTY | Screw Description | Screwdriver Description |
|----|-----------|----------|-----|---------------------------|-------------------------|
| 1 | Screw | 5138465 | 30 | Screw FH M2.5X5 (NL) | Phillips #1 |
| 2 | Screw | 5162727 | 5 | Screw M3x25 (NL) | TORX #10 |
| 3 | Screw | 5308509 | 2 | Screw M3x15 (NL) | TORX #10 |
| 4 | Screw | 2327793 | 14 | D2 Screw SJ2836-87 M3x8 | Phillips #1 |
| 5 | Screw | 5307880 | 5 | Screw M3x825 with Cushion | Phillips #1 |
| 6 | Screw | 2327764 | 7 | D2 Screw M2X3 (NYLOK) | Phillips #2 |
| 7 | Screw | 5307881 | 7 | Screw M2x3 OD 7.80 | Phillips #1 |
| 8 | Screw | 5307883 | 8 | Screw M2.5x4 OD 3.60 | Phillips #1 |
| 9 | Screw | 5307887 | 6 | Screw FH M2.5x15 (NL) | Phillips #1 |

NOTE: *This is ultra-portable device in small size, please carefully keep all the screws, cables aside during service activities.*

NOTE: *When disassembling the Top Assy, please make sure to lay it on soft and stable surface to avoid scratching the LCD.*

Docking Station Desk Support Assy

Tools

- NA

Needed Manpower

- 1 person, 1 minute

Preparation

- Cut off the AC Power input.

Removal Procedure

Table 8-2: Removal Procedure for Docking Station Desk Support Assy

| No. | Steps | Corresponding Graphic |
|-----|---|---|
| 1. | Remove probe holders. | |
| 2. | Push the trigger to the other side, then use the other hand to take the Docking module off track. |  |

Mounting Procedure

1. Install the new parts in the reversed order of removal.

Docking Cart Plastic Shelf

Tools

- NA

Needed Manpower

- 1 person, 1 minute

Preparation

- Cut off the AC Power input.
- Lift the cart to the highest position.
- Lock the wheels.

Removal Procedure

Table 8-3: Removal Procedure for Docking Cart Plastic Shelf

| No. | Steps | Corresponding Graphic |
|-----|---|---|
| 1. | Lift the Plastic Shelf and remove it from Docking Cart. |  |

Mounting Procedure

1. Install the new parts in the reversed order of removal.

Docking Cart Printer Shelf

Tools

- Common phillips screwdrivers

Needed Manpower

- 1 person, 2 minutes

Preparation

- Cut off the AC Power input.
- Lift the cart to the highest position.
- Lock the wheels.

Docking Cart Printer Shelf (continued)

Removal Procedure

Table 8-4: Removal Procedure for Docking Cart Printer Shelf

| No. | Steps | Corresponding Graphic |
|-----|---|---|
| 1. | Disconnect the printer power cable and USB Cable from Docking module. |  |
| 2. | Lift the Printer Shelf and remove it from Docking Cart. |  |

Table 8-4: Removal Procedure for Docking Cart Printer Shelf

| No. | Steps | Corresponding Graphic |
|-----|--|---|
| 3. | Reverse the printer shelf with printer, unscrew 4 screws [M3*8], take out the printer. |  A photograph of a printer shelf assembly. The shelf is a light-colored rectangular panel mounted on a silver metal frame. Four screws are visible, securing the shelf to the frame. The screws are labeled with numbers 1, 2, 3, and 4. Screws 1 and 2 are located on the top edge of the shelf, while screws 3 and 4 are located on the bottom edge. The frame has a curved, hook-like shape at the bottom corners. |

Mounting Procedure

1. Install the new parts in the reversed order of removal.

Loading Base Image Software

Purpose of this section

This section describes how to reinstall and/or install software on Venue 50.

Data Management - moving all images

An error, or a power loss may occur.

Always backup the Patient Archive and the Presets (System Configurations) before loading the software!

In order to complete a successful restore of the Patient Database, as needed after a hard disk replacement, or if all the content on the hard disk has been erased, the images must be moved away from Venue 50 before doing backup of the Patient Database.

Depending on the location set-up, either move the images to a remote server or to removable media like SD Card or USB Memory Stick.

Recording important settings and parameters

If any modification has been made to system default settings, the user presets will be lost after software upgrade. Please record current user presets and re-config the system after the upgrade is complete.

An error, or a power loss may occur.

It is considered to be best practice to always keep a record on paper of the settings for the Venue 50. Verify if it is current before you start to load software!

You may go to **Utility** to record the settings and parameters for **General, Settings, Image, Measure, System, Connectivity** and **About**. You may refer to Chapter 4 in Basic User Manual (the latest version).

Loading the System Software

NOTE: Before loading the system software, please ensure that the power can be continuously supplied and there is no risk of power cut off during loading procedure.

NOTE: Before starting this procedure, remove all probes and peripherals.

NOTE: While it is believed to be unnecessary, it would not hurt to disconnect the system from the network and remove all transducers.

NOTE: Do not plug and unplug the probe, mount to or release from the Docking Station/Cart during the upgrading process.

1. Insert the SD Card labeled “VENUE Software” into the SD Card Socket.
2. Power on the system, then the software upgrading startup screen displays. Time in the upper right corner shows system time, and the time in the lower right corner shows the time of upgrading process.

Loading the System Software (continued)

3. Select **Semi** or **Full** for the installation type.
 - **Semi**: install the software to system partition only. All the user data and log will be kept.
 - **Full**: format the whole disk and then install the software to system partition. All the user data and log will be cleared.

Full installation will clear all the user data and log.

4. Press **Confirm** to confirm the selection. Press **Exit** to cancel.

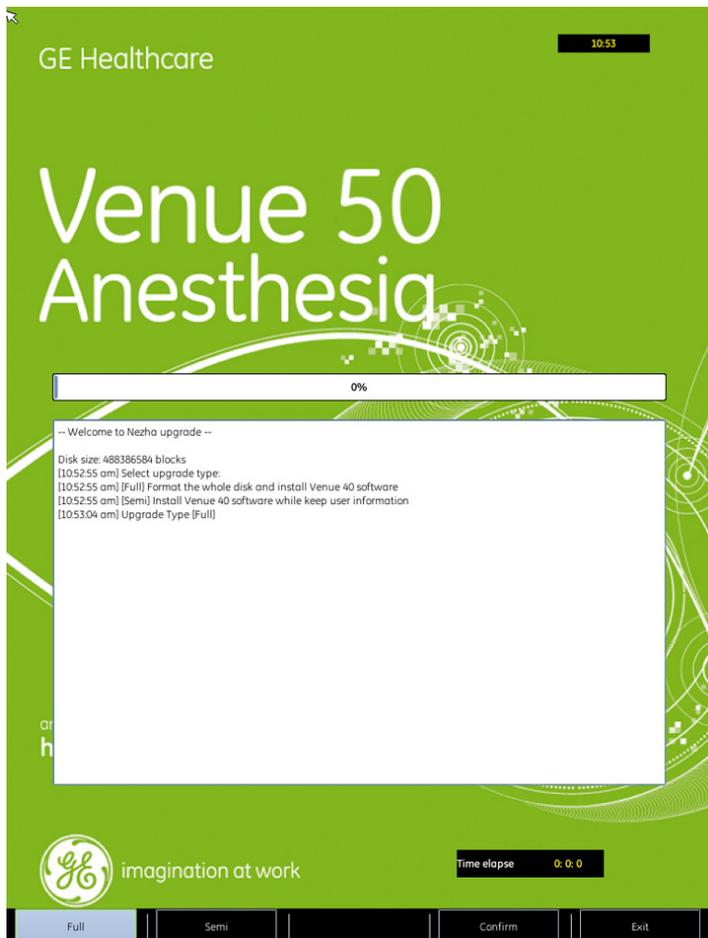

Figure 8-1. Select Installation Type

Loading the System Software (continued)

5. Press **Start** to begin the upgrading process.

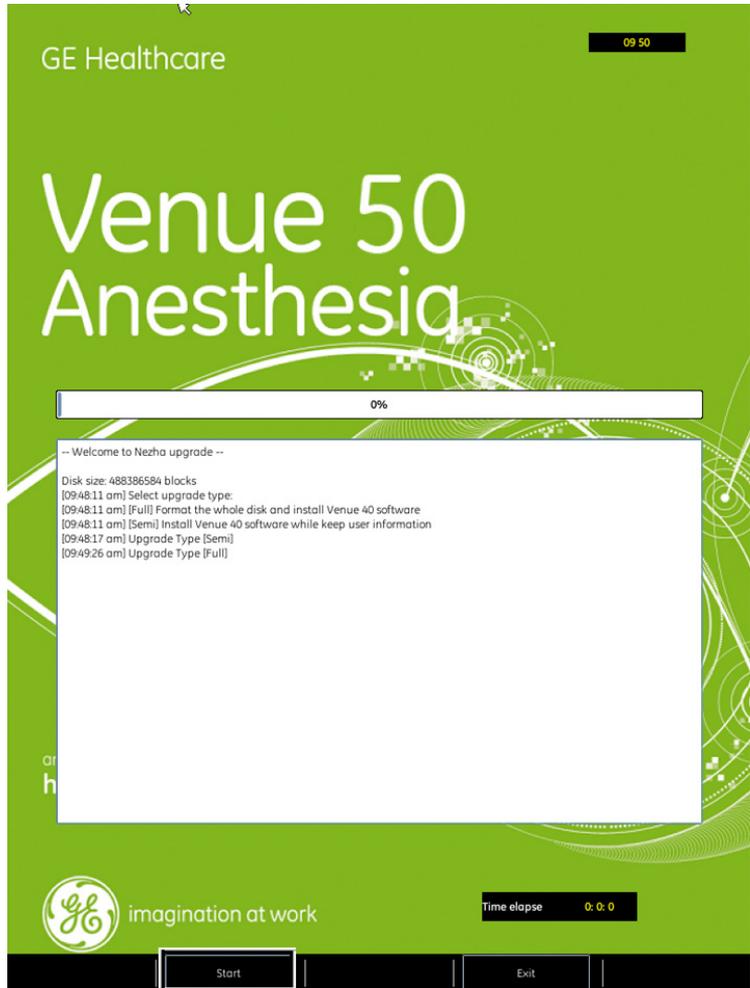

Figure 8-2. Start Installation Process

NOTE: Before the process is started, the system will count down 10 seconds.

Loading the System Software (continued)

6. If you need to pause the upgrade process, press **Abort**.

NOTE: *You may need to wait for a few seconds before you can go to the next step.*

It is not recommended to press **Abort** during the upgrading process, for system crash may occur. Shut down the system and restart the upgrading process again.

7. When the process is paused, press **Continue** to go back to the upgrading, press **Exit** to cancel the upgrading.

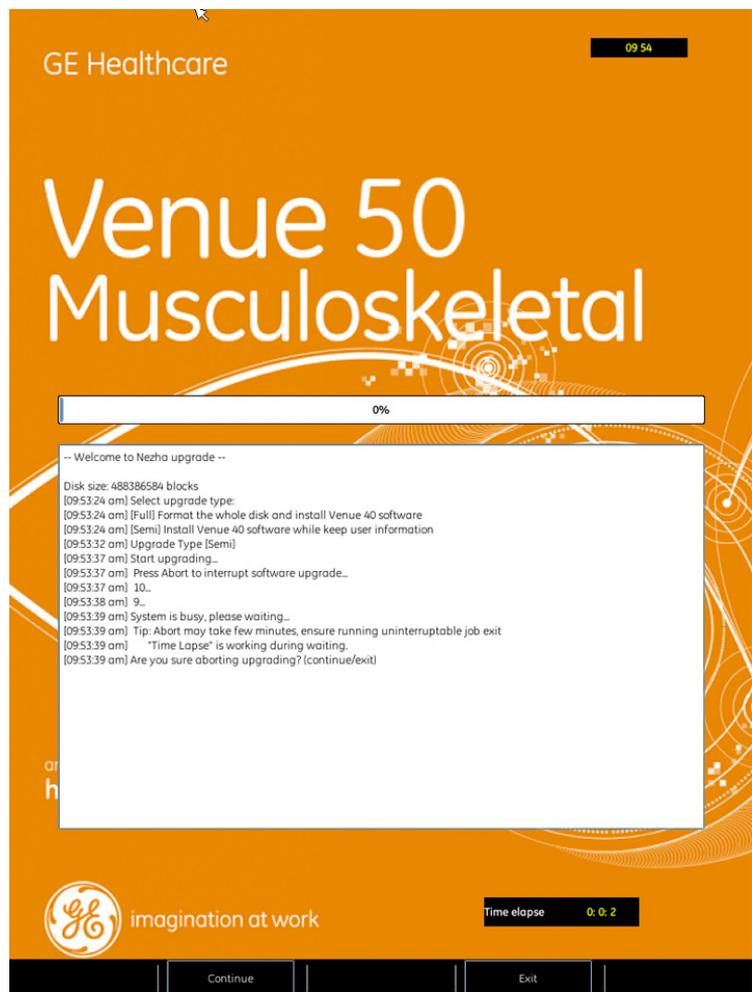

Figure 8-3. Upgrading process paused

Loading the System Software (continued)

8. After the process is completed, press **Shutdown** to shut down the system. Take out the SD card and reboot the system.

CAUTION

If the SD card is taken out before the system shutdown, system crash may occur. Press and hold down the On/Off switch until the system shutdown.

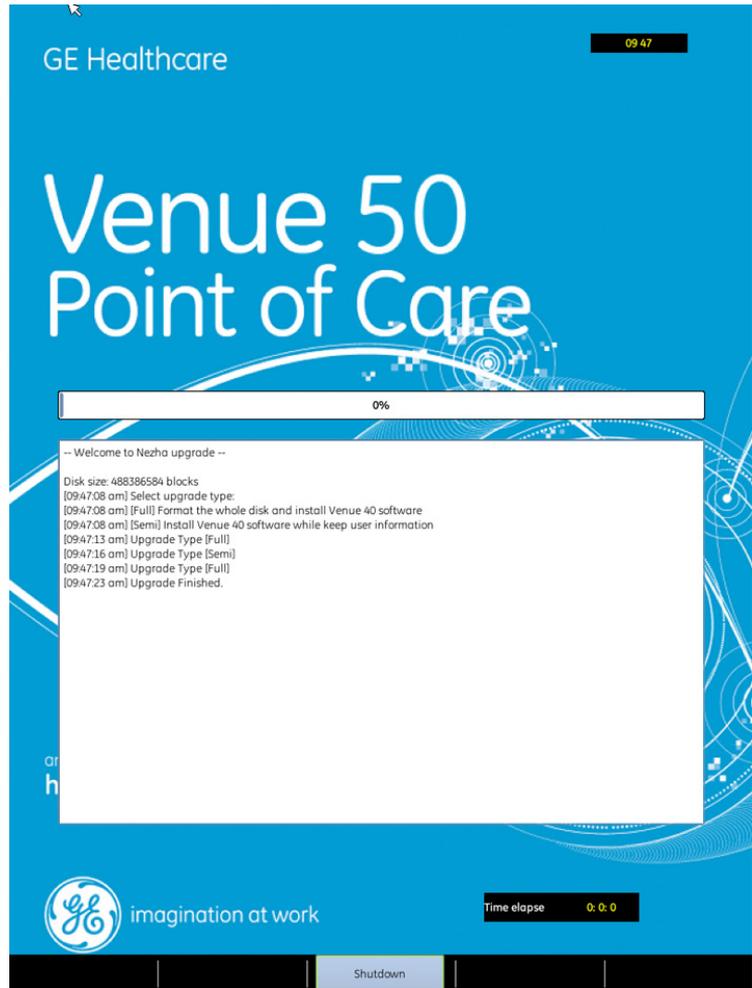

Figure 8-4. Upgrading process complete

9. Perform Touch Screen Calibration: go to **Utility->Diagnostics->Miscellaneous** to execute touch screen calibration.

Software Version check out

Functional Check-out

1. Press **Utility**, select **About** to check whether the software version is the right version for use.

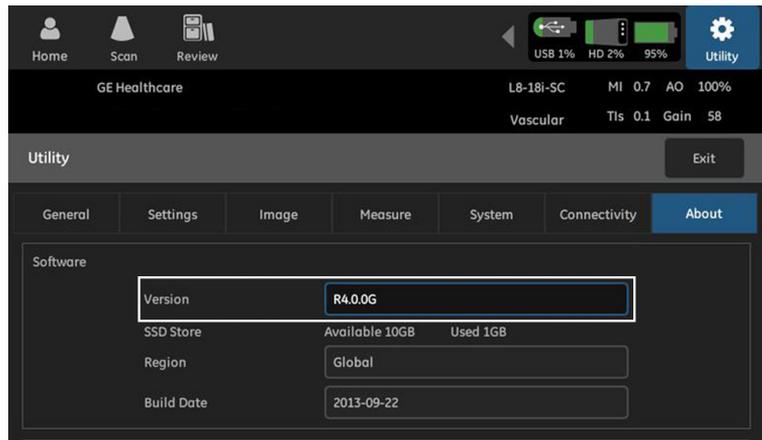

Figure 8-5. Software version check

Option Strings Check

NOTE: After the system software loading completion, please check the option strings to ensure that the options are activated and working.

1. Reboot the system.
2. Select **Utility ->System**.
3. Ensure that all the installed option keys are displayed and the status of Options are valid.
 - The status “Permanent” means the option keys are activated and working.
 - The status “disabled” means the option keys are not activated and not working. Check if the option is installed and if the serial number and option key are correct.

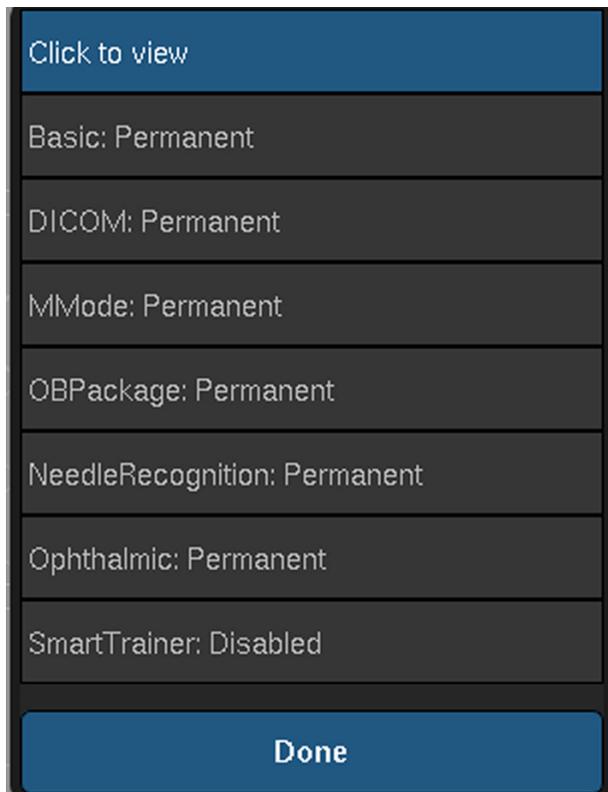

Figure 8-6. Strings check

Probe Recognition Check

NOTE: After the system software loading completion, please check to ensure that the system can recognize the probes.

Plug in the probe. In scanning mode, the probe information is displayed on the right top location of the screen.

Plug in at least one of each type of the probes and check if each of the probes is recognized and the probe information is displayed correctly.

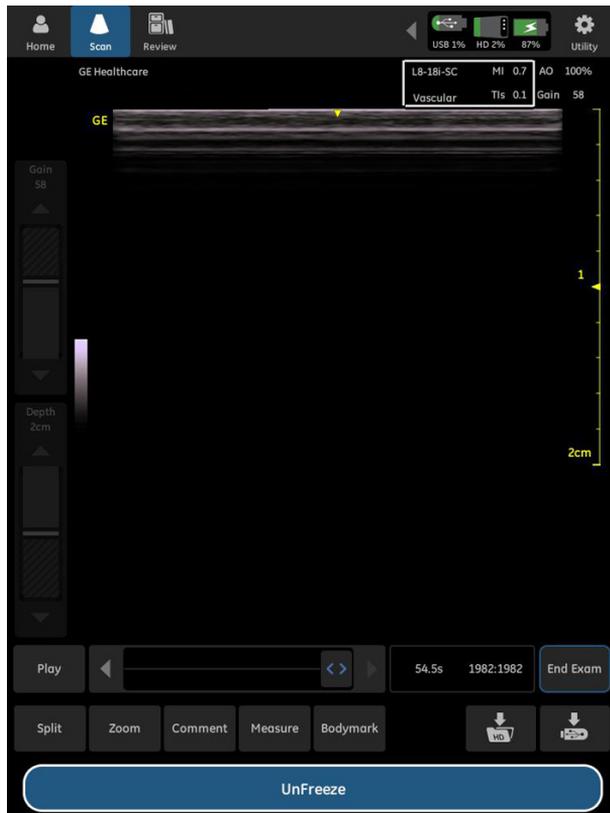

Figure 8-7. Probe identification

Peripheral Device Check

Check to ensure that all the peripheral devices work properly.

For instruction of peripheral device check, See 'Peripheral Checks' on *page 4-25 for more information*.

Used Media and Used Parts Disposal

The waste of electrical and electronic equipment must not be disposed as unsorted municipal waste and must be collected separately.

Please contact the manufacturer or other authorized disposal company to decommission your equipment.

1. Properly dispose of all old or used parts and media according to current policies and procedures. Never keep old software or leave old software at the customer site.
2. Ensure that no Proprietary Material, such as this installation manual and the Venue 50 Proprietary Manual, are left at the customer.

Chapter 9

Renewal Parts

This chapter lists the renewal parts available for the Venue 50.

Overview

Contents in this chapter

- 'Overview' on *page 9-2*
- 'List of Abbreviations' on *page 9-3*
- 'Renewal Parts Lists' on *page 9-4*

List of Abbreviations

Table 9-1: List of Abbreviations

| ABBREVIATION | DESCRIPTION |
|---------------------|------------------------|
| Assy | ASSEMBLY |
| FRU Y | Replacement Part |
| FRU N | Non Stock Part |
| PWA | Printed Wire Assembly |
| HDD | Hard Disk Drive |
| LCD | Liquid Crystal Display |
| Ctrl | Control |
| MST | Master Board |

Renewal Parts Lists

NOTE: The part replacement is shown by the item numbers. If the part is replaced by a new version, the item number for the new version will have a letter in the alphabetical order after the Arabic numerals. For example, item 300B is to replace item 300A, and item 300A is to replace item 300. So please refer to the item numbers for the latest version of the parts.

Power Cables

Table 9-2: Power Cord for Docking Cart

| Part Name | Part Number | Description | Quantity |
|------------------|-------------|--|----------|
| ACDC Power Cable | 5177146-2 | ACDC Power Cable for USA | 1 |
| ACDC Power Cable | 5177123-2 | ACDC Power Cable for Europe | 1 |

Chapter 10

Care and Maintenance

This chapter describes Care and Maintenance on the Ultrasound system and peripherals. These procedures are intended to maintain the quality of the Ultrasound system's performance. Read this chapter completely and familiarize yourself with the procedures before performing a task.

Periodic maintenance inspections

It has been determined by engineering that your Venue 50 does not have any high wear components that fail with use, therefore no Periodic Maintenance inspections are mandatory.

However, some customers' Quality Assurance Programs may require additional tasks and or inspections at a different frequency than listed in this manual.

Warnings

BE SURE TO DISCONNECT THE ULTRASOUND SYSTEM POWER PLUG AND OPEN THE MAIN CIRCUIT BREAKER BEFORE YOU REMOVE ANY PARTS. BE CAUTIOUS WHENEVER POWER IS STILL ON AND COVERS ARE REMOVED.

Practice good ESD prevention. Wear an anti-static strap when handling electronic parts and even when disconnecting/connecting cables.

Do not pull out or insert circuit boards while power is on.

Do not operate this Ultrasound system unless all board covers and frame panels are securely in place. System performance and cooling require this.

Why do maintenance

Keeping records

It is good business practice that ultrasound facilities maintain records of periodic and corrective maintenance. The Ultrasound Periodic Maintenance Inspection Certificate provides the customer with documentation that the Ultrasound system is maintained on a periodic basis.

A copy of the *Ultrasound Periodic Maintenance Inspection Certificate* should be kept in the same room or near the Ultrasound system.

Quality assurance

In order to gain accreditation from organizations such as the American College of Radiology (USA), it is the customer's responsibility to have a quality assurance program in place for each Ultrasound system. The program must be directed by a medical physicist, the supervising radiologist/physician or appropriate designee.

Routine quality control testing must occur regularly. The same tests are performed during each period so that changes can be monitored over time and effective corrective action can be taken.

Testing results, corrective action and the effects of corrective action must be documented and maintained on the site.

Your GE service representative can help you with establishing, performing and maintaining records for a quality assurance program. Contact GE for coverage and/or price for service.

Maintenance task schedule

How often should maintenance tasks be performed?

The Care and Maintenance task schedule (provided in [Table 10-1 on page 10-6](#)) specifies how often your Venue 50 should be serviced and outlines items requiring special attention.

NOTE: It is the customer's responsibility to ensure the Venue 50 care and maintenance is performed as scheduled in order to retain its high level of safety, dependability and performance.

Your GE Service Representative has an in-depth knowledge of your Venue 50 and can best provide competent, efficient service. Contact GE for coverage information and/or price for service.

The service procedures and recommended intervals shown in the Care and Maintenance Task Schedule assumes that you use your Venue 50 for an average patient load (10-12 per day) and not use it as a primary mobile Ultrasound system which is transported between diagnostic facilities.

How often should maintenance tasks be performed? (continued)

NOTE: If conditions exist which exceed typical usage and patient load, then it is recommended to increase the periodic maintenance frequencies.

Table 10-1: Customer Care Schedule

| Service at Indicated Time | Daily | Weekly | Monthly | Per Facilities QA Program | Notes |
|--------------------------------------|-------|--------|---------|---------------------------|--|
| Clean Probes | •* | | | | * or before each use |
| Inspect AC Mains Cable | | | • | | Mobile Ultrasound system: Check Weekly |
| Inspect Cables and Connectors | | | • | | |
| Inspect Battery | | | • | | |
| Clean Console | | | • | | |
| Clean LCD | | | • | | |
| Console Leakage Current Checks | | | | See Notes | Twice Annually |
| Peripheral Leakage Current Checks | | | | See Notes | Twice Annually |
| Surface Probe Leakage Current Checks | | | | See Notes | Twice Annually |
| Measurement Accuracy Checks | | | | See Notes | Twice Annually |
| Functional Checks | | | | See Notes | also after corrective maintenance |

NOTE: The maintenance may require specialized equipment to complete.

NOTE: The periodic maintenances are not mandatory. The table above is for reference only.

Tools required

NOTE: For a list of required tools for servicing the Venue 50, refer to chapter 8.

Standard GE tool kit

The following is a description of the “Standard” GE tool kit in the USA. Not all tools are required.

Table 10-2: Overview of GE-1 tool kit contents

| Tool ID | Description | Tool ID | Description |
|---------|-------------------------------------|------------|------------------------------------|
| 9-45358 | Pliers Retaining Ring | 9-XL9971MM | Xcelite-hex Blade 1.27mm |
| 9-4078 | Scribe | 9-XL9972MM | Xcelite-hex Blade 1.5mm |
| 9-44572 | Wrench Open End 3/8 - 7/16 | 9-XL9973MM | Xcelite-hex Blade 2 mm |
| 9-44579 | Wrench Open End 1/2 - 9/16 | 9-XL9974MM | Xcelite-hex Blade 2.5mm |
| 9-44579 | Wrench Open End 1/2 - 9/16 | 9-XL9975MM | Xcelite-hex Blade 3mm |
| 9-45385 | Pliers, Arc Joint 7 inch | 9-XL9976MM | Xcelite-hex Blade 4mm |
| 9-45378 | Pliers, Slip Joint | 9-XL9977MM | Xcelite-hex Blade 5mm |
| 9-4518 | Pliers, Long Nose, Miniature | 9-XL991CM | Handle |

| 9-GH19512 | Countersink 1/2 inch | 9-44046 | 3/8 inch Socket Set |
| 9-44741 | 12 PC Combination Wrench Set | | |

Special tools, supplies and equipment used for maintenance

Table 10-4: Overview of tool requirements for periodic maintenance

| Tool / kit | Part Number | Comments |
|------------------------------|-------------|---|
| Safety Analyzer | | The safety Analyzer tool should be calibrated and compliant with AAMI/ESI 1993 or IEC 60601 or AS/NZS 3551. |
| B/W Printer Cleaning Sheet | | See printer user manual for requirements |
| Color Printer Cleaning Sheet | | See printer user manual for requirements |
| Disposable Gloves | | |

System maintenance

Preliminary checks

The preliminary checks take about 15 minutes to perform. Refer to the Ultrasound system user documentation whenever necessary.

Table 10-5: System preliminary checks

| Step | Item | Description |
|------|----------------|--|
| 1. | Ask and Listen | Ask the customer if they have any problems or questions about the equipment. |
| 2. | Paperwork | Fill in the top of Ultrasound Inspection Certificate (see Figure 10-6 on page 10-34). Record all probes and Ultrasound system options. |
| 3. | Power up | <ul style="list-style-type: none"> • Turn the Ultrasound system power on and verify that all fans and peripherals turn on. • Watch the displays during power up to verify that no warning or error messages are displayed. • Where applicable, confirm that the battery is charged. If no AC Input present, use the internal battery. |
| 4. | Probes | Verify that the Ultrasound system properly recognizes all probes. |
| 5. | Displays | Verify proper display on the monitor. |

Functional checks

NOTE: See also Chapter 4.

The functional checks take about 60 minutes to perform. Refer to the Ultrasound system user documentation whenever necessary.

System checks

Table 10-6: System functional checks

| Step | Item | Description |
|------|-----------------------------|---|
| 1. | B Mode | Verify basic B Mode (2D) operation. Check the basic Ultrasound system controls that affect this mode of operation. |
| 2. | CF Mode | Verify basic CF Mode (Color Flow Mode) operation. Check the basic Ultrasound system controls that affect this mode of operation. |
| 3. | PDI Modes | Verify basic PDI Mode operation (Power Doppler Imaging). Check the basic Ultrasound system controls that affect this mode of operation. |
| 4. | M Mode | Verify basic M Mode operation. Check the basic Ultrasound system controls that affect this mode of operation. |
| 5. | Probe Elements | Perform an Element Test on each probe to verify that all the probe elements and system channels are functional. |
| 6. | Applicable Software Options | Verify the basic operation of all optional modes such as Contrast. Check the basic Ultrasound system controls that affect each options operation. |
| 7. | Xmit/Recv Elements | Use the Visual Channel Utility on the loop connect to verify that all system xmit/recv channels are functional. |
| 8. | Operator Touch Panel test | Perform the Operator Touch Panel Test Procedure. |
| 9. | LCD | Verify basic LCD display functions. Refer to Chapter 2 of the User Manual. |
| 10. | Software Menu check | Verify Software Menu display functions. Refer to Chapter 2 of the User Manual. |
| 11. | Peripherals | See: ' Peripheral Checks ' on page 4-25 . |
| 12. | Measurements | In measurement mode, make distance measurement, get result in result window. Verify the distance by graduated rule. Distance Accuracy should be within $\pm 5\%$. (Name result from result window Result A, result from graduated rule Result B; Distance Accuracy = (Result B-Result A)/Result A) |

Peripheral/option checks

If any peripherals or options are not part of the system configuration, the check can be omitted.

See 'Functional checks' on page 4-8 for more information.

Mains cable inspection

Table 10-7: Mains Cable Inspection, As Appropriate

| Step | Item | Description |
|------|-------------|---|
| 1. | Unplug Cord | Disconnect the mains cable from the wall and Ultrasound system. |
| 2. | Inspect | Inspect it and its connectors for damage of any kinds. |
| 3. | Verify | Verify that the LINE, NEUTRAL and GROUND wires are properly attached to the terminals, and that no strands may cause a short circuit. |

Cleaning

Table 10-8: General Cleaning

| Step | Item | Description |
|------|--------------|---|
| 1. | Console | Remove the battery. Use a fluid detergent in warm water on a soft, damp cloth to carefully wipe the entire system. Be careful not to get the cloth too wet so that moisture does not enter the console. |
| 2. | Probe Holder | Clean probe holders. (they may need to be soaked to remove excess gel). |
| 3. | LCD | Use a soft, non-abrasive folder cloth or use the cleaners listed in Chapter 6 of User Manual. Gently wipe the LCD face. DO NOT use a glass cleaner that has a hydrocarbon base (such as Benzene, Methy Alcohol or Methy Ethyl Ketone) on LCD with the filter (anti-glare shield). |

Physical inspection

NOTE: These features may not be present on all Ultrasound systems.

Table 10-9: Physical checks

| Step | Item | Description |
|------|------------------------------------|--|
| 1. | Labeling | Verify that all Ultrasound system labeling is present and in readable condition. |
| 2. | Scratches & Dents | Inspect the exterior for dents, scratches or cracks. . |
| 3. | Input Power | Refer to: ' Mains cable inspection ' on page 10-13 . |
| 4. | Cables & Connectors | Check all internal cable harnesses and connectors for wear and secure connector seating. Pay special attention to footswitch assembly and probe strain or bend reliefs. |
| 5. | Shielding & Covers | Check to ensure that all EMI shielding, internal covers, air flow panels and screws are in place. Missing covers and hardware could cause EMI/RFI problems while scanning. |
| 6. | Control Panel | Inspect control panel. Note any damaged or missing items. |
| 7. | Control Panel Lighting | Check for proper operation of all operator panel light. |
| 8. | External I/O | Check all connectors for damage. |
| 9. | Power and System Status Indicators | Check for proper operation of all Power and System Status Indicators. |
| 10. | Battery | Where applicable, check that the battery is not damaged, does not leak, does not emit an odor, and is not deformed or discolored. Observe all warnings and cautions for battery handling, recharging, storing, and/or disposal, as listed in ' Battery Safety ' on page 1-21 . |

Optional Diagnostic Checks

Optionally you can access the diagnostic software as described in Chapter 7. View the error logs and run desired diagnostics.

View the Log

1. Review the system error log for any problems.
2. Check the temperature log to see if there are any trends that could cause problems in the future.

Probe maintenance

Probe related checks

Table 10-10: System preliminary checks

| Step | Item | Description |
|------|--------------|--|
| 1. | Probe Holder | Clean probe holders. (they may need to be soaked to remove excess gel). |
| 2. | Probes | Thoroughly check the Ultrasound system probe connectors and remove dust from inside the connector sockets if necessary. Visually check for bent, damaged or missing pins. Verify that the Ultrasound system properly recognizes all probes. |

Basic probe care

The Ultrasound system user manuals and various probe handling cards provide a complete description of probe care, maintenance, cleaning and disinfection. Ensure that you are completely familiar with the proper care of GE probes.

Ultrasound probes can be easily damaged by improper handling. See the User Manual and probe care cards for more details. Failure to follow these precautions can result in serious injury and equipment damage. Failure to properly handle or maintain a probe may also void its warranty.

Any evidence of wear indicates the probe cannot be used.

Do a visual check of the probe pins and Ultrasound system sockets before plugging in a probe.

The Interoperative probes often have special considerations and individual probe user manuals. For Interoperative probes also refer to their separate user manuals.

Basic probe cleaning

Refer to the User's Manual for details on probe cleaning.

To help protect yourself from blood borne diseases, wear approved disposable gloves. These are made of nitrile derived from vegetable starch to prevent allergic latex reactions.

Failure to follow the prescribed cleaning or disinfection procedures will void the probe's warranty.

DO NOT soak or wipe the lens with any product not listed in the User Manual. Doing so could result in irreparable damage to the probe.

Follow care instructions that came with the probe.

Disinfect a defective probe before you return it. Be sure to tag the probe as being disinfected.

Battery Performance Maintenance

Battery replacement every three years is recommended.

It is recommended to do battery performance maintenance one time per year.

Please follow the chart below to carry out battery performance maintenance.

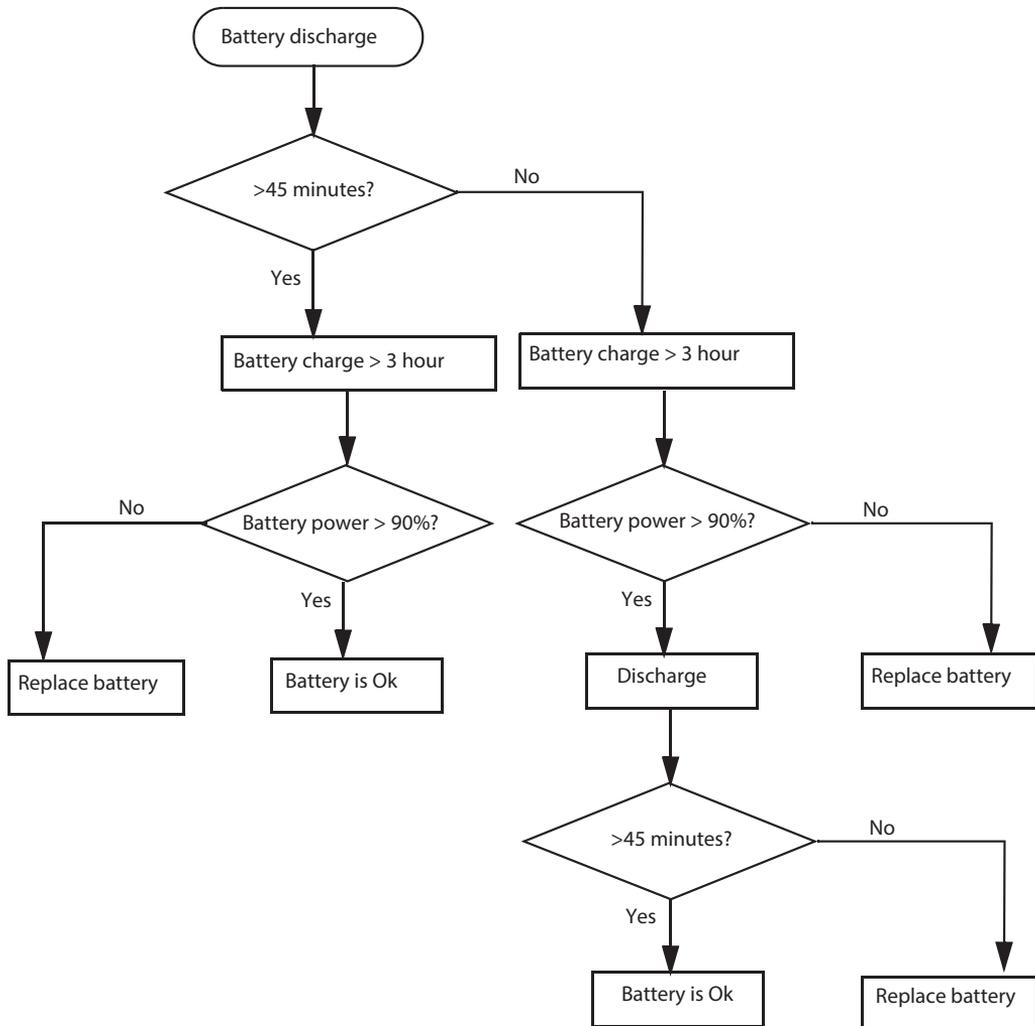

Figure 10-1. Flow chart of Battery Performance Maintenance

NOTE: Disconnect all probes when discharge battery.

NOTE: Discharge the battery to let the system automatically shut down.

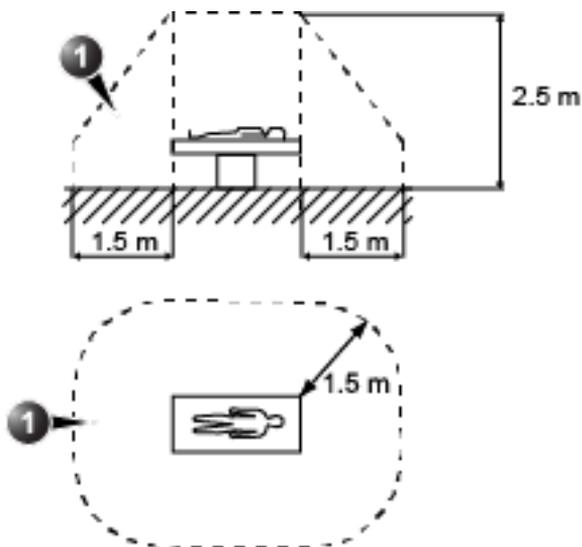

Electrical safety tests

Overview

NOTE: For all instructions in the “Electrical safety tests” section in case of using a UPS (uninterruptible power supply) the terms outlet, wall outlet, AC wall outlet and power outlet refer to the AC power outlet of the UPS. In case of further available AC (or DC) power outlets at the same used UPS, these must remain unused i.e. not connected to any other devices.

Please observe that some Uninterruptible Power Supplies (UPS) may not be medical devices! If the UPS is no medical device, it has to be located outside of the patient environment (according to IEC 60601-1 / UL 60601-1).

1. Patient environment

Overview (continued)

The following topics and measurements are covered in this subsection:

- 'Safety test overview' on *page 10-20*
- 'Leakage current limits' on *page 10-22*
- 'Outlet test - wiring arrangement' on *page 10-24*
- 'Grounding continuity' on *page 10-25*
- 'Chassis leakage current test' on *page 10-26*
- 'Probe leakage current test' on *page 10-29*

Safety test overview

The electrical safety tests in this section are based on and conform to IEC 60601-1 Medical Equipment Safety Standards. They are intended for the electrical safety evaluation of cord-connected, electrically operated, patient care equipment. If additional information is needed, refer to the IEC 60601-1 documents

THE USER MUST ENSURE THAT THE SAFETY INSPECTIONS ARE PERFORMED WHENEVER DAMAGE IS SUSPECTED AND AT LEAST EVERY 6 MONTHS ACCORDING TO THE REQUIREMENTS OF THE PATIENT SAFETY STANDARD IEC-EN 60601-1. DO NOT USE THE ULTRASOUND SYSTEM OR INDIVIDUAL PROBES WHICH FAIL ANY PORTION OF THE SAFETY TEST.

DANGER

TO MINIMIZE RISK OF ELECTRICAL SHOCK, ONLY TRAINED PERSONS ARE ALLOWED TO PERFORM THE ELECTRICAL SAFETY INSPECTIONS AND TESTS.

DANGER

TO AVOID ELECTRICAL SHOCK, THE ULTRASOUND SYSTEM UNDER TEST **MUST NOT** BE CONNECTED TO OTHER ELECTRICAL EQUIPMENT. REMOVE ALL INTERCONNECTING CABLES AND WIRES. THE ULTRASOUND SYSTEM UNDER TEST MUST NOT BE CONTACTED BY USERS OR PATIENTS WHILE PERFORMING THESE TESTS.

Possible risk of infection. Do not handle soiled or contaminated probes and other components that have been in patient contact. Follow appropriate cleaning and disinfecting procedures before handling the equipment.

Safety test overview (continued)

Prior to initiating any electrical test, the Ultrasound system must be visually inspected. Perform the following visual checks:

- Check for missing or loose enclosure covers that could allow access to internal live parts.
- Examine the mains cord, mains plug and appliance inlet for damaged insulation and adequacy of strain relief and cable clamps.
- Locate and examine all associated transducers. Inspect the cables and strain relief at each end. Inspect the transducer enclosure and lens for cracks, holes and similar defects.

Test the system, peripherals and probes for leakage current. Excessive leakage current can cause injury or death in sensitive patients. High leakage current can also indicate degradation of insulation and a potential for electrical failure. Do not use probes or equipment having excessive leakage current.

To minimize the risk that a probe may shock someone the customer should:

- Not use a probe that is cracked or damaged in any way.
- Check probe leakage current:
 - Based on your facilities QA program for surface probes.
 - Based on your facilities QA program for endocavitary probes.
 - whenever probe damage is suspected.

Leakage current limits

Energy Control and Power Lockout for Venue 50.

When servicing parts of the Ultrasound system where there is exposure to voltage greater than 30 volts:

1. Follow LOCK OUT/TAG OUT procedures.
2. Turn off the breaker.
3. Unplug the Ultrasound system.
4. Maintain control of the Ultrasound system power plug.
5. Wait for at least 30 seconds for capacitors to discharge as there are no test points to verify isolation.
6. Remove/disconnect the battery, if present.

Ultrasound System components may be energized.

Compare all safety-test results with safety-test results of previously performed safety tests (e.g. last year etc). In case of unexplainable abrupt changes of safety-test results consult experienced authorized service personnel or GE for further analysis.

The following limits are summarized for IEC 60601-1 Medical Equipment Safety Standards. These limits are GE standards and in some cases are lower than the above standards listed.

Table 10-11: Chassis Leakage Current Limits - Accessible Metal Surface

| Country | Normal Condition | Open Ground | Reverse Polarity | Open Neutral |
|---------------------------|------------------|-------------|------------------|--------------|
| All (Except USA & Canada) | 0.1 mA | 0.5 mA | 0.5 mA | 0.5 mA |
| USA & Canada | 0.1 mA | 0.3 mA | 0.3 mA | 0.3 mA |

Table 10-12: Type BF Applied Part Leakage Current Limits - Probes Surface

| Country | Normal Condition | Open Ground | Reverse Polarity | Open Neutral | *Mains Applied |
|---------|------------------|-------------|------------------|--------------|----------------|
| All | 0.1 mA | 0.5 mA | 0.5 mA | 0.5 mA | 5.0 mA |

Leakage current limits (continued)

Table 10-13: Type CF Applied Part Leakage Current Limits - ECG Connections

| Country | Normal Condition | Open Ground | Reverse Polarity | Open Neutral | *Mains Applied |
|---------|------------------|-------------|------------------|--------------|----------------|
| All | 0.01 mA | 0.05 mA | 0.05 mA | 0.05 mA | 0.05 mA |

NOTE: **Mains Applied refers to the sink leakage test where mains (supply) voltage is applied to the part to determine the amount of current that will pass (or sink) to ground if a patient is in contact with mains voltage.*

The following tests are performed at the factory and should be performed at the site. These tests are: chassis leakage current, and probe leakage current. All measurements are made with an electrical safety analyzer which should be calibrated and compliant with AAMI/ESI 1993 or IEC 60601 or AS/NZS 3551.

Table 10-14: Equipment Type and Test Definitions

| | | |
|--------------------|---|--|
| Applied Parts (AP) | Parts or accessories that contact the patient to perform their function. For ultrasound equipment, this includes transducers and ECG leads. | |
| Type BF | Body Floating or non-conductive ultrasound probes which are marked with the 'man in box' BF symbol. this includes all transducers. |  |
| Type CF | Cardiac Floating or non-conductive intraoperative probes for direct cardiac contact and isolated ECG connections so marked with the 'heart in box' CF symbol. |  |
| Sink Leakage | The current resulting from the application of mains voltage to the applied part. This test is required test for Type CF applied parts. | |

Outlet test - wiring arrangement

Test all outlets in the area for proper grounding and wiring arrangement by plugging in the neon outlet tester and noting the combination of lights that are illuminated. Any problems found should be reported to the hospital immediately and the receptacle should not be used.

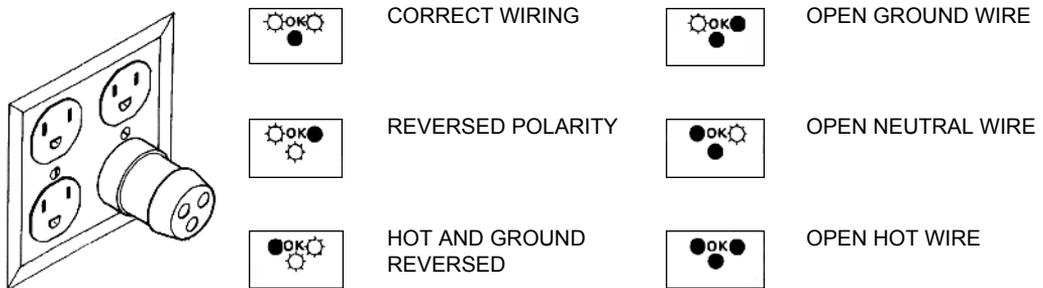

Figure 10-2. Typical alternate outlet tester

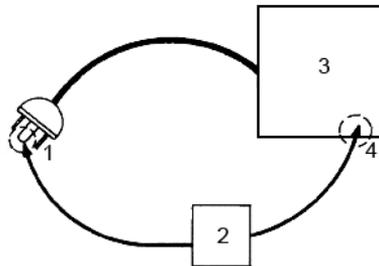

NOTE: *No outlet tester can detect the condition where the Neutral (grounded supply) conductor and the Grounding (protective earth) conductor are reversed. If later tests indicate high leakage currents, this should be suspected as a possible cause and the outlet wiring should be visually inspected.*

Grounding continuity

DANGER ELECTRIC SHOCK HAZARD. THE PATIENT MUST NOT BE CONTACTED TO THE EQUIPMENT DURING THIS TEST.

Measure the resistance from the third pin of the attachment plug to the exposed metal parts of the case. The ground wire resistance should be less than **0.1** ohms. Reference the procedure in the IEC60601-1.

1. GROUND PIN
2. OHMMETER
3. DOCKING CART
4. ACCESSIBLE METAL PART:
 - I/O Board
 - Probe cable hook

Figure 10-3. Ground continuity test

Chassis leakage current test

DANGER ELECTRIC SHOCK HAZARD. WHEN THE METER'S GROUND SWITCH IS OPEN, DON'T TOUCH THE ULTRASOUND SYSTEM!.

CAUTION

Equipment damage possibility. Never switch the Polarity and the status of Neutral when the Ultrasound system is powered ON. Be sure to turn the Ultrasound system power OFF before switching them using the POLARITY switch and/or the NEUTRAL switch. Otherwise, the Ultrasound system may be damaged.

Definition

This test measures the current that would flow in a grounded person who touched accessible metal parts of the bedside station if the ground wire should break. The test verifies the isolation of the power line from the chassis. The meter is connected from accessible metal parts of the case to ground. Measurements should be made with the unit On and Off, with the power line polarity Normal and Reversed. Record the highest reading.

CAUTION

Electric Shock Hazard. When the meter's ground switch is OPEN, don't touch the unit!

CAUTION

Equipment damage possibility. Never switch the Polarity and the status of Neutral when the unit is powered ON. Be sure to turn the unit power OFF before switching them using the POLARITY switch and/or the NEUTRAL switch. Otherwise, the unit may be damaged.

Generic procedure

The test verifies the isolation of the power line from the chassis. The testing meter is connected from accessible metal parts of the case to ground. Measurements should be made with the unit ON and OFF, with the power line polarity Normal and Reversed. Record the highest reading of current.

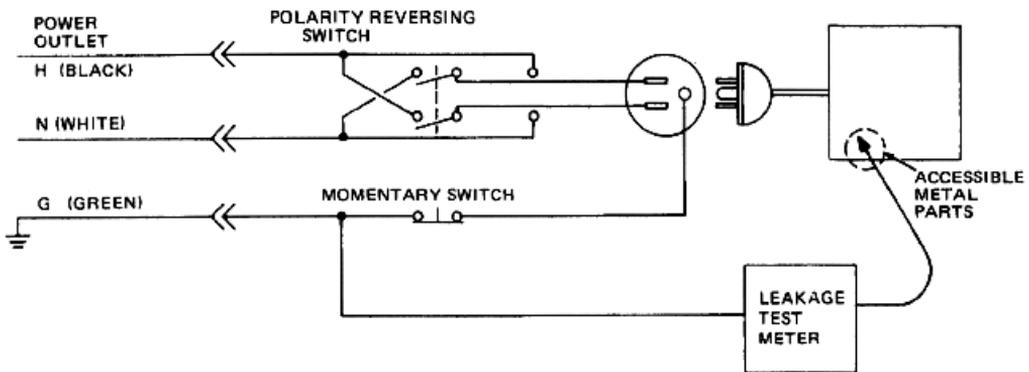

Figure 10-4. Set Up for Chassis Source Leakage Current, IEC 601-1 Clause 19 - Continuous Leakage Currents and Patient, Auxiliary Currents

When using the Microguard or a similar test instrument, its power plug may be inserted into the wall outlet and the equipment under test is plugged into the receptacle on the panel of the meter. This places the meter in the grounding conductor and the current flowing from the case to ground will be indicated in any of the current ranges. The maximum allowable limit for chassis source leakage is shown in [Table 10-11 on page 10-22](#).

Data Sheet for enclosure Source Leakage Current

The test passes when all readings measure less than the value shown in [Table 10-11 on page 10-22](#). Record all data on the PM Inspection Certificate.

Table 10-15: Typical Data Sheet for enclosure Source Leakage Current

| Unit Power | Tester Polarity Switch | Tester Neutral or Ground Switch | Test 1 Speaker Cover | Test 2 Real Panel Metal Parts | Optional Test 3 | Optional Test 4 |
|---------------------------------------|------------------------|---------------------------------|----------------------|-------------------------------|-----------------|-----------------|
| Enter Name of tested peripheral here: | | | | | | |
| ON | NORM | OPEN | | | | |
| ON | NORM | CLOSED | | | | |
| ON | REV | OPEN | | | | |
| ON | REV | CLOSED | | | | |
| OFF | NORM | OPEN | | | | |
| OFF | NORM | CLOSED | | | | |

Probe leakage current test

DO NOT USE THE PROBE IF THE INSULATING MATERIAL HAS BEEN PUNCTURED OR OTHERWISE COMPROMISED. INTEGRITY OF THE INSULATION MATERIAL AND PATIENT SAFETY CAN BE VERIFIED BY SAFETY TESTING ACCORDING TO IEC60601-1.

Equipment damage possibility. Never switch the Polarity and the status of Neutral when the Ultrasound system is powered ON. Be sure to turn the Ultrasound system power OFF before switching them using the POLARITY switch and/or the NEUTRAL switch. Otherwise, the Ultrasound system may be damaged.

Definition

This test measures the current that would flow to ground from any of the probes through a patient who is being scanned and becomes grounded by touching some other grounded surface.

NOTE: Some leakage current is expected on each probe, depending on its design. Small variations in probe leakage currents are normal from probe to probe. Other variations will result from differences in line voltage and test lead placement. It is abnormal if no leakage current is measured. If no leakage current is detected, check the configuration of the test equipment.

Tools

For needed tools, see: [‘Tools required’ on page 10-7.](#)

Generic procedure on probe leakage current

Measurements should be made with the ground open and closed, with power line polarity normal and reversed, and with the unit Off and On. For each combination, the probe must be active to find the worst case condition.

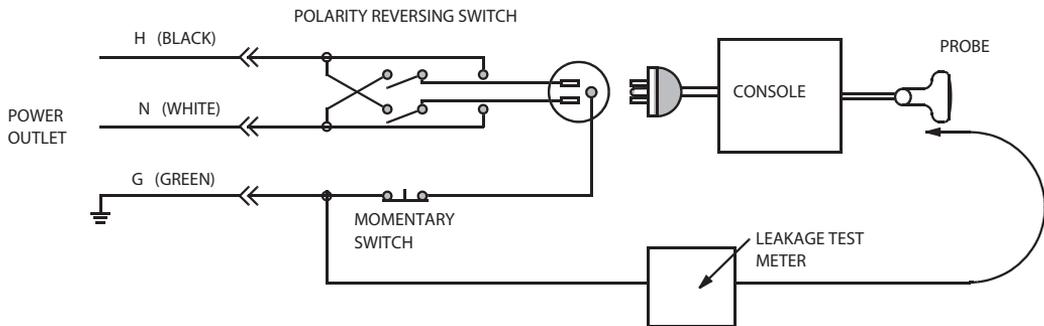

Figure 10-5. Set up for probe leakage current

NOTE: *Each probe will have some amount of leakage current, dependent on its design. Small variations in probe leakage currents are normal from probe to probe. Other variations will result from differences in line voltage and test lead placement.*

DANGER TO AVOID PROBE DAMAGE AND POSSIBLE ELECTRIC SHOCK, DO NOT IMMERSE PROBES INTO ANY LIQUID BEYOND THE LEVEL INDICATED IN THE PROBE USERS MANUAL. **DO NOT TOUCH THE PROBE, CONDUCTIVE LIQUID OR ANY PART OF THE UNIT UNDER TEST WHILE DOING THE TEST.**

Meter Procedure Using Probe Adapter

Follow the Safety Analyzer tool instruction to test each transducer for leakage current.

The electrical Safety Analyzer tool should be calibrated and compliant with AAMI/ESI 1993 or IEC 60601 or AS/NZS 3551.

No Meter Procedure Using Probe Adapter

Follow the Safety Analyzer tool instruction to test each transducer for leakage current.

The electrical Safety Analyzer tool should be calibrated and compliant with AAMI/ESI 1993 or IEC 60601 or AS/NZS 3551.

Data Sheet for Transducer Source Leakage Current

The test passes when all readings measure less than the values shown in [Table 10-12 on page 10-22](#). Record all data on the PM Inspection Certificate.

Table 10-16: Typical Data Sheet For Transducer Source Leakage Current

| Transducer Tested: | | | |
|---------------------------|-------------------------------------|--|--------------------|
| Unit Power | Tester Power Polarity Switch | Tester GROUND or NUETRAL Switch | Measurement |
| ON | NORM | OPEN | |
| ON | NORM | CLOSED | |
| ON | REV | OPEN | |
| ON | REV | CLOSED | |
| OFF | NORM | OPEN | |
| OFF | NORM | CLOSED | |
| OFF | REV | OPEN | |
| OFF | REV | CLOSED | |

When there's too much leakage current ...

AC/DC Fails

Where applicable, check the AC/DC adapter and its cable. Replace a new one if any portion is defective.

Enclosure Fails

Check for any damage to the enclosure. Replace any defective part.

Inspect wiring for bad crimps, poor connections, or damage.

Test the wall outlet; verify it is grounded and is free of other wiring abnormalities. Notify the user or owner to correct any deviations. As a work around, check the other outlets to see if they could be used instead.

NOTE: No outlet tester can detect the condition where the white neutral wire and the green grounding wire are reversed. If later tests indicate high leakage currents, this should be suspected as a possible cause and the outlet wiring should be visually inspected.

Probe Fails

Change another probe to confirm if the fail is caused by console.

NOTE: Each probe will have some amount of leakage, dependent on its design. Small variations in probe leakage currents are normal from probe to probe. Other variations will result from differences in line voltage and test lead placement. The maximum allowable leakage current for body surface contact probe differs from inter-cavity probe. Be sure to enter the correct probe type in the appropriate space on the check list.

If excessive leakage current is slot dependent, inspect the system connector for bent pins, poor connections, and ground continuity.

If the problem remains with the probe, replace the probe.

Peripheral Fails

Inspect wiring for bad crimps, poor connections, or damage.

Still Fails

If all else fails, begin isolation by removing the probes, external peripherals, then the on board ones, one at a time while monitoring the leakage current measurement.

New Unit

If the leakage current measurement tests fail on a new Ultrasound system and if situation can not be corrected, submit a Safety Failure Report to document the Ultrasound system problem. Remove Ultrasound system from operation.
