5.4	14.9.2007	PV1-21 mapping added OBR-46 mapping added PV1-8.13,PV1-8.14,PV1-9.13,PV1- 9.14 mapping added Coding of DG1-3 and PR1-3 added for French version	Juan de Hoyos Bernhard Hornung
5.5	19.11.2007	TXA-4 used to carry ref. Doctor information ZEX, ZEP segments added	Juan de Hoyos
5.6	11.01.2008	2nd trim. Diagnosis added to discrete export list	Juan de Hoyos
5.8	30.4.2008	New fields 2.3, 5.1 and 5.2 in ZEX segment added	Juan de Hoyos
5.9	29.5.2008	New fields from 3.4 to 3.11 in ZEX segment added	Juan de Hoyos
5.10	5.5.2009	New fields 7 and 8 added to ZEX	Juan de Hoyos

5.11	5. Nov. 2009	Typo corrected Manufacture's address symbol added	Gabriele Rieger
5.12	13.Nov.2009	Table 0005 updated Flag "C" added to OBX-11 in MDM^T02 event	Juan de Hoyos
6	11. Dec. 2009	Version after review	Gabriele Rieger

1. Introduction

This document describes the HL7 interface, as it relates to the ViewPoint 5.5 application.

The ViewPoint (VP) HL7 Interface communicates with a Hospital Information System (HIS) or other third-party transcription systems via HL7 formatted messages that import relevant clinical information. This interface is designed to send and receive messages using the TCP/IP protocol, via a socket connection, and minimal layer protocol (MLP). These HL7 messages are created automatically, depending upon the event(s) within the ViewPoint application. The interface communication is at the server level, rather than at each individual client workstation, although a client is able to produce the necessary triggers. Successful implementation requires the assistance of a ViewPoint Interface Specialist, who can provide training, technical, and project management information.

2. Assumptions

- a) It is assumed that the reader of this document is familiar with the HL7 standard. This document is not intended to be used standalone, but should be used in conjunction with the HL7 Specification Version 2.4*.
- b) The HL7 interface can only be processed using the TCP/IP protocol.
- c) The VP customer is responsible for ensuring that the receiving HIS or transcription system is capable and ready to receive HL7 messages from VPHiscomServer for processing.

*HL7 standards committee members can acquire a free copy of the current HL7 specification from the Internet via the HL7 World Wide Web page (<http://www.HL7.org>). Non-members can order a copy from the same location or by contacting the appropriate representatives:

Health Level Seven
3300 Washtenaw Ave.,
Suite 227
Ann Arbor, MI 48104-4250
Phone: (313) 677-7777; Fax: (313) 677-6622

3. Interface Workflow Overview

Inbound Workflow Overview

Supported incoming HL7 messages triggered from HIS systems are processed and their content saved into the local database.

Successfully processed messages are acknowledged. Messages, which for any reason were not processed, are rejected with a non-acknowledge ACK HL7 message (as defined in HL7 Specification 2.4). The VPHisComServer can log every incoming message and its internal processing.

Incoming streams that are not MLLP formatted are ignored.

Support of Movement Information

ViewPoint can receive and use information about patient movements. Since there is no HL7 standard yet, which describes how movement information should be transmitted, ViewPoint uses the ZBE segment. The chosen implementation should be compatible to the IHE standard and to the German extension of the HL7 2.4 standard.

The ZBE segment is optional and can be included in every ADT message. In order to be IHE compatible, ViewPoint also accepts the ADT^Z99 event for updating movement information.

ViewPoint requires that the Movement-ID sent in ZBE-1 is unique across all movements in the system.

For every message containing a ZBE segment, ViewPoint will use the field PV1-3 (Assigned Patient Location) for the Medical and Nursing ward.

Unless ZBE-3 specifies the Movement End Time, ViewPoint assumes Movement Start + 24h as Movement End Time for movements of type 'visit'.

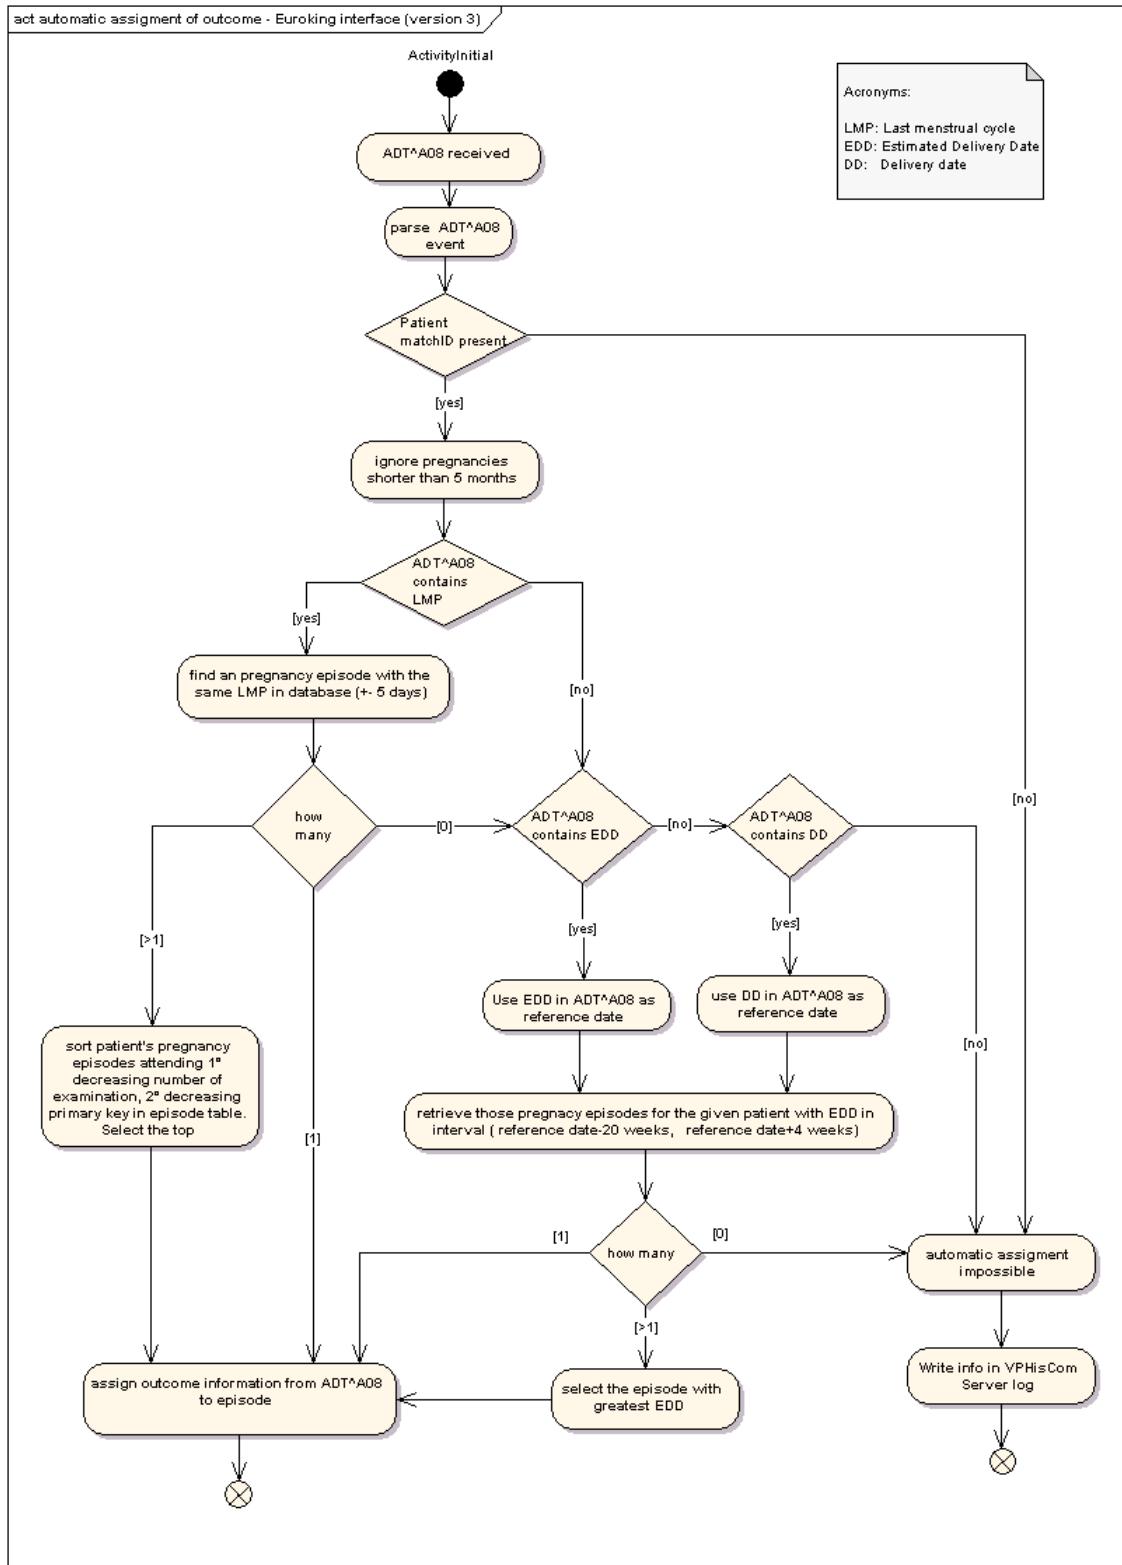

ViewPoint treats UPDATE or INSERT commands similarly; if a movement record exists in the ViewPoint database, it will be updated. If it doesn't exist, it will be inserted.

ViewPoint uses the trigger event the value of PV1-2 and ZBE-4 to determine some additional information about the movement as shown in the following table:

Trigger Event	ZBE-4	PV1-2	Impact on Movement Information
ADT^A01 - Admit/visit notification ADT^A02 - Transfer a patient ADT^A05 - Pre-admit a patient ADT^A08 - Update patient inform. ADT^Z99 - Update movement inform.	DELETE or CANCEL	<irrelevant>	Movement will be deleted.
	<all other>	out patient	'visit' movement will be created /
		<all other>	'stay' movement will be created / updated.
ADT^A03 - Discharge/end visit	DELETE or CANCEL	<irrelevant>	Movement will be deleted.
	<all other>	out patient	'visit' movement will be created /
		<all other>	'discharge' movement will be created / updated.
ADT^A04 - Register patient (one day visit)	DELETE or CANCEL	<irrelevant>	Movement will be deleted.
	<all other>	<irrelevant>	'visit' movement will be created / updated.
ADT^A06 - outpatient to inpatient ADT^A07 - inpatient to outpatient ADT^A11 - Cancel admit/visit notification ADT^A29 - Delete person information ADT^A40 - Merge patient	<irrelevant>	<irrelevant>	ZBE segment will be ignored.
ADT^A12 - Cancel transfer ADT^A13 - Cancel discharge/end visit	INSERT or UPDATE	out patient	'visit' movement will be created /
	<all other>	'stay' movement will be created /	
	<all other>	<irrelevant>	Movement will be deleted.

Processing of Outcome messages

ViewPoint 5.5 offers an interface to populate outcome information through HL7 AD^A08 events containing the non-standard segment ZDD. The association between incoming outcomes and existing medical cases in ViewPoint follows the algorithm described in the diagram below. It shows all the preconditions and filters that have been taken into consideration in order to avoid a wrong assignation of outcomes.

Outbound Workflow Overview

Processing of Acknowledge Messages

ViewPoint expects to receive an acknowledge message for each message sent. ViewPoint waits a configurable time period for such a message (10 – 120 seconds).

If no acknowledge is received within the configured time frame, ViewPoint tries to re-send the message after some time. No other messages are sent by ViewPoint unless an acknowledgment is received (or the message was removed from the queue by an administrator).

ViewPoint uses the field MSA-1 to check whether the acknowledgment was positive or negative (AA: accepted, AE: error). ViewPoint checks the field MSA-2 to ensure that the acknowledge message belongs to the message that was just sent by ViewPoint. If MSA-2 is empty, ViewPoint always assumes, that the ACK message belongs to the message that was just sent.

ViewPoint ignores any acknowledge message which is not related to the last message sent by ViewPoint.

If ViewPoint does not receive an acknowledge message within the configured time frame, it will terminate the connection to the socket of the receiving system, wait for 60 seconds and re-connect to the socket.

In rare circumstances, ViewPoint will send a message twice. These duplicates can be identified by the receiving system by means of the Message Control ID. This can happen e.g. when:

- Network problems prevented the reception of an acknowledge message.
- The VPHISComServer process was killed during a send operation.

4. HL7 Data Description

The VPHiscomServer HL7 interface uses a socket connection. For the import, the HL7 interface process is a server on a configurable port. The message itself has got a HL7 MLLP frame, i.e. a leading \x0B and trailing \x1C\x0D. Acknowledge messages can be returned after a message is received.

Delimiter Definition

ViewPoint supports the standard HL7 encoding rules. Other encodings are not supported.

Delimiter	Value	Encoding Character Position	Usage
Segment Terminator	<cr> hex 0D	-	Terminates a segment record. This value cannot be changed by implementors.
Field Separator		-	Separates two adjacent data fields within a segment. It also separates the segment ID from the first data field in each segment.
Component Separator	^	1	Separates adjacent components of data fields where allowed.
Subcomponent Separator	&	4	Separates adjacent subcomponents of data fields where allowed. If there are no subcomponents, this character may be omitted.
Repetition Separator	~	2	Separates multiple occurrences of a field where allowed.
Escape Character	\	3	Escape character for use with any field represented by an ST, TX or FT data type, or for use with the data (fourth) component of the ED data type. If no escape characters are used in a message, this character may be omitted. However, it must be present if subcomponents are used in the message.

Data Types

The data types in this section are listed in alphabetical order.

Note

The examples given in this section do not specify the choice of the component or subcomponents for data types which contain multiple components or subcomponents. This must be specified in the field definitions that follow the formal segment attribute tables to a maximum length of 64K.

Except for the TS data type and the maximum or minimum lengths for several other data types (CE, PN, TX, FT), the field length of HL7 attributes is specified in the segment attribute tables, and any specific length of the components or subcomponents of those attributes must be specified in the field definitions that follow the formal segment attribute tables. In general, HL7 does not specify the lengths of components and/or subcomponents.

In certain data type definitions, square brackets, “[]”, are used to specify optional parts of a data type (or of a data type component or subcomponent).

Data Type Definition

Data Type Category/ Data Type	Data Type Name	Notes/Format
Alphanumeric		
ST	String	
TX	Text data	
FT	Formatted text	
Numerical		

Data Type Category/ Data Type	Data Type Name	Notes/Format
	Composite quantity with units	<quantity (NM)> ^ <units (CE)>
MO	Money	<quantity (NM)> ^ <denomination (ID)>
	Numeric	
	Sequence ID	
SN	Structured numeric	<comparator> ^ <num1 (NM)>, ^ <separator/suffix> ^ <num2 (NM)>
Identifier		
ID	Coded values for HL7 tables	
IS	Coded value for user-defined tables	
HD	Hierarchic designator	<namespace ID (IS)> ^ <universal ID (ST)> ^ <universal ID type (ID)> Used only as part of EI and other data types.
EI	Entity identifier	<entity identifier (ST)> ^ <namespace ID (IS)> ^ <universal ID (ST)> ^ <universal ID type (ID)>
RP	Reference pointer	<pointer (ST) > ^ < application ID (HD)> ^ <type of data (ID)> ^ <subtype (ID)>
PL	Person location	<point of care (IS) > ^ <room (IS) > ^ <bed (IS)> ^ <facility (HD)> ^ <location status (IS) > ^ <person location type (IS)> ^ <building (IS) > ^ <floor (IS) > ^ <location description (ST)>
PT	Processing type	<processing ID (ID)> ^ <processing mode (ID)>
Date/Time		
DT	Date	YYYY[MM[DD]]
TM	Time	HH[MM[SS(.S[S[S]])]][+/-ZZZZ]
TS	Time stamp	YYYY[MM[DD[HHMM[SS(.S[S[S]])]]]][+/-ZZZZ] ^ <degree of precision>
Code Values		
CE	Coded element	<identifier (ST)> ^ <text (ST)> ^ <name of coding system (ST)> ^ <alternate identifier (ST)> ^ <alternate text (ST)> ^ <name of alternate coding system (ST)>
CK	Composite ID with check digit	<ID number (NM)> ^ <check digit (NM)> ^ <code identifying the check digit scheme employed (ID)> ^ <assigning authority (HD)>

Data Type Category/ Data Type	Data Type Name	Notes/Format
CN	Composite ID number and name	<ID number (ST)> ^ <family name (ST)> ^ <given name (ST)> ^ <middle initial or name (ST)> ^ <suffix (e.g., JR or III) (ST)> ^ <prefix (e.g., DR) (ST)> ^ <degree (e.g., MD) (ST)> ^ <source table (IS)> ^ <assigning authority (HD)>
CX	Extended composite ID with check digit	<ID (ST)> ^ <check digit (ST)> ^ <code identifying the check digit scheme employed (ID)> ^ <assigning authority (HD)> ^ <identifier type code (IS)> ^ <assigning facility (HD)>
XCN	Extended composite ID number and name	In Version 2.3, use instead of the CN data type. <ID number (ST)> ^ <family name (ST)> ^ <given name (ST)> ^ <middle initial or name (ST)> ^ <suffix (e.g., JR or III) (ST)> ^ <prefix (e.g., DR) (ST)> ^ <degree (e.g., MD) (ST)> ^ <source table (IS)> ^ <assigning authority (HD)> ^ <name type code (ID)> ^ <identifier check digit (ST)> ^ <code identifying the check digit scheme employed (ID)> ^ <identifier type code (IS)> ^ <assigning facility (HD)>
Generic		
CM	Composite	No new CM's are allowed after HL7 Version 2.2. Hence there are no new CM's in Version 2.3.
Demographics		
AD	Address	<street address (ST)> ^ <other designation (ST)> ^ <city (ST)> ^ <state or province (ST)> ^ <zip or postal code (ST)> ^ <country (ID)> ^ <address type (ID)> ^ <other geographic designation (ST)>
PN	Person name	<family name (ST)> ^ <given name (ST)> ^ <middle initial or name (ST)> ^ <suffix (e.g., JR or III) (ST)> ^ <prefix (e.g., DR) (ST)> ^ <degree (e.g., MD) (ST)>
TN	Telephone number	[NN] [(999)]999-9999[×99999][B99999][C any text]
XAD	Extended address	In Version 2.3, replaces the AD data type. <street address (ST)> ^ <other designation (ST)> ^ <city (ST)> ^ <state or province (ST)> ^ <zip or postal code (ST)> ^ <country (ID)> ^ <address type (ID)> ^ <other geographic designation (ST)> ^ <county/parish code (IS)> ^ <census tract (IS)>
XPN	Extended person name	In Version 2.3, replaces the PN data type. <family name (ST)> ^ <given name (ST)> ^ <middle initial or name (ST)> ^ <suffix (e.g., JR or III) (ST)> ^ <prefix (e.g., DR) (ST)> ^ <degree (e.g., MD) (ST)> ^ <name type code (ID)>

Data Type Category/ Data Type	Data Type Name	Notes/Format
XON	Extended composite name and ID number for organizations	<organization name (ST)> ^ <organization name type code (IS)> ^ <ID number (NM)> ^ <check digit (NM)> ^ <code identifying the check digit scheme employed (ID)> ^ <assigning authority (HD)> ^ <identifier type code (IS)> ^ <assigning facility ID (HD)>
XTN	Extended telecommunications number	In Version 2.3, replaces the TN data type. [NNNN] ([9999])999-9999 [X99999] [B99999] [C any text] ^ <telecommunication use code (ID)> ^ <telecommunication equipment type (ID)> ^ <email address (ST)> ^ <country code (NM)> ^ <area/city code (NM)> ^ <phone number (NM)> ^ <extension (NM)> ^ <any text (ST)>
Specialty/Chapter Specific		
Waveform		
CD	Channel definition	For waveform data only, see Chapter 7, Section 7.15.3. <channel identifier (*)> ^ <channel number (NM)> & <channel name (ST)> ^ <electrode names (*)> ^ <channel sensitivity/units (*)> ^ <calibration parameters (*)> ^ <sampling frequency (NM)> ^ <minimum/maximum data values (*)>
Specialty/Chapter Specific		
NA	Numeric array	For waveform data only, see Chapter 7, Section 7.15.1. <value1 (NM)> ^ <value2 (NM)> ^ <value3 (NM)> ^ <value4 (NM)> ^ ...
ED	Encapsulated data	Supports ASCII MIME-encoding of binary data. <source application (HD)> ^ <main type of data (ID)> ^ <data subtype (ID)> ^ <encoding (ID)> ^ <data (ST)>
Price data		
CP	Composite price	In Version 2.3, replaces the MO data type. <price (MO)> ^ <price type (ID)> ^ <from value (NM)> ^ <to value (NM)> ^ <range units (CE)> ^ <range type (ID)>
Patient Administration/Financial Information		
FC	Financial class	<financial class (ID)> ^ <effective date (TS)>
Extended Queries		
QSC	Query selection criteria	<name of field (ST)> ^ <relational operator (ID)> ^ <value (ST)> ^ <relational conjunction (ID)>
QIP	Query input parameter list:	<field name (ST)> ^ <value1 (ST) & value2 (ST) & value3 (ST) ...>
RCD	Row column definition:	<HL7 item number (ST)> ^ <HL7 data type (ST)> ^ <maximum column width (NM)>
Master Files		

Data Type Category/ Data Type	Data Type Name	Notes/Format
DLN	Driver's license number	<license number (ST)> ^ <issuing state, province, country (IS)> ^ <expiration date (DT)
JCC	Job code/class	<job code (IS)> ^ <job class (IS)>
VH	Visiting hours	<start day range (ID)> ^ <end day range (ID)> ^ <start hour range (TM)> ^ <end hour range (TM)>
Medical Records/Information Management		
PPN	Performing person time stamp:	<ID number (ST)> ^ <family name (ST)> ^ <given name (ST)> ^ <middle initial or name (ST)> ^ <suffix (e.g., JR or III) (ST)> ^ <prefix (e.g., DR) (ST)> ^ <degree (e.g., MD) (ST)> ^ <source table (IS)> ^ <assigning authority (HD)> ^ <name type code(ID)> ^ <identifier check digit (ST)> ^ <code identifying the check digit scheme employed (ID)> ^ <identifier type code (IS)> ^ <assigning facility (HD)> ^ <date/time action performed (TS)>

- for subcomponents of these elements please refer to the definition in the text.
- for additional data types please refer to the HL7 standard documentation

Inbound HL7 Interface

Fields With Insufficient Length

<u>Note</u>	Danger of Data Falsification!
	The length of certain fields in ViewPoint is shorter than recommended by the HL7 standard. You must not use the ViewPoint HL7 interface if your HL7 implementation uses fields that exceed the max. length supported by ViewPoint. The table below shows the maximum field lengths supported by ViewPoint.

Field	Max. Length (characters)	Element Name
PID-3 (or PID-2, if empty)	30	Patient ID (External ID)
PV1-19	15	Visit Number
PV1-8.1	40	Referring Doctor ID
PV1-9.1	40	Consulting Doctor ID
ORC-2	30	Placer Order Number

Supported HL7 Events

Message Type	Event	Usage
ADT	A01	Admit/visit notification
ADT	A02	Transfer a patient
ADT	A03	Discharge/end visit
ADT	A04	Register a patient (one day visit)
ADT	A05	Pre-admit a patient
ADT	A06	Change an outpatient to an inpatient
ADT	A07	Change an inpatient to an outpatient
ADT	A08	Update patient information
ADT	A11	Cancel admit/visit notification
ADT	A12	Cancel transfer
ADT	A13	Cancel discharge/end visit
ADT	A29	Delete person information
ADT	A40	Merge patient
OMG	O19	Submit a clinical order
ORM	O01	Submit a clinical order
ADT	Z99	Update Patient Movement Information

Structure of ADT Messages

ADT^A(*) ADT Message

MSH	Message Header
[EVN]	Event
PID	Patient Identification
[PV1]	Patient Visit
[ZBE]	Patient Movement Information
[IN1]	Insurance information
[ZDD]	Outcome information

ACK^A(*) Acknowledgment

MSH	Message Header
MSA	Message Acknowledgment

(*): The message structure is identical for the following ADT events:

ADT^A01,ADT^A02,ADT^A03,ADT^A04,ADT^A05,ADT^A06,ADT^A07,ADT^A08,ADT^A11
,ADT^A12,ADT^A13 and ADT^A29.

Structure of ADT^Z99 Event

ADT^Z99 ADT Message

MSH	Message Header
[EVN]	Event
PID	Patient Identification
[PV1]	Patient Visit
[ZBE]	Patient Movement Information

ACK^Z99 Acknowledgment

MSH	Message Header
MSA	Message Acknowledgment

Structure of ADT^A40 Event

ADT^A40 ADT Message

MSH	Message Header
[EVN]	Event
PID	Patient Identification

[PV1]	Patient Visit
MGR	Merge information

ACK^A40 Acknowledgment

MSH	Message Header
MSA	Message Acknowledgment

Note: Multiple PID/MGR pairs are not supported.

Structure of OMG^O19 Event

OMG^O19 General Clinical Order Message

MSH	Message Header
[EVN]	Event
PID	Patient Identification
[PV1]	Patient Visit
ORC	Common Order
OBR	Observation

ACK^O19 Acknowledgment

MSH	Message Header

MSH	Message Header
[EVN]	Event
PID	Patient Identification
[PV1]	Patient Visit
ORC	Common Order
[OBR]	Observation

ACK^O01 Acknowledgment

MSH	Message Header
MSA	Message Acknowledgment

HL7 Segments and Fields Definition for Inbound Workflow

MSH - Message Header Segment

The MSH segment defines the intent, source, destination, and some specifics of the syntax of a message.

A sample MSH segment:

MSH|^&~|Viewpoint|Orders|||20040330144907||ORM^O01|116|P|2.4.1||||

SEQ	LEN	DT	OPT	RP/#	ELEMENT NAME	USAGE
1	1	ST	R		Field Separator	
2	4	ST	R		Encoding Characters	^~\&
3	180	HD	O		Sending Application	Sending Application
4	180	HD	O		Sending Facility	NOT USED
5	180	HD	O		Receiving Application	Name of the receiving application as defined in the configuration of the VP HL7 interface.
6	180	HD	O		Receiving Facility	NOT USED
7	26	TS	O		Date/Time Of Message	Time of the Message
8	40	ST	O		Security	NOT USED
9	7	CM	R		Message Type	HL7 Message Type
10	20	ST	R		Message Control ID	MESSAGE IDENTIFIER
11	3	PT	R		Processing ID	NOT USED
12	8	ID	R		Version ID	NOT USED
13	15	NM	O		Sequence Number	NOT USED
14	180	ST	O		Continuation Pointer	NOT USED
15	2	ID	O		Accept Acknowledgment Type	Values Comparison: "AL" or not "AL"
16	2	ID	O		Application Acknowledgment Type	Values Comparison: "AL" or not "AL"
17	2	ID	O		Country Code	NOT USED
18	6	ID	O	Y/3	Character Set	NOT USED
19	60	CE	O		Principal Language Of Message	NOT USED

MSA – Message acknowledgement segment

The MSA segment contains acknowledge information.

SEQ	LEN	DT	OPT	RP/#	ELEMENT NAME	USAGE
1	2	ID	R		Acknowledgment Code	Acknowledgment Code: AA: accepted AE: error
2	20	ST	R		Message Control ID	Message Control ID
3	80	ST	O		Text Message	Error message if any
4	15	NM	O		Expected Sequence Number	NOT USED
5	1	ID	B		Delayed Acknowledgment Type	NOT USED
6	250	CE	O		Error Condition	NOT USED

EVN – Event type segment

The EVN segment is used to communicate necessary trigger event information to receiving applications. This information is used only for HL7 definitions and is not used specifically for any field(s) within the ViewPoint application. This segment is required.

SEQ	LEN	DT	OPT	RP/#	ELEMENT NAME	USAGE
1	3	ID	B		Event type code	Type of the event (e.g. P12)
2	26	TS	R		Recorded date/time	YYYYMMDDHHmmss
3	26	TS	O		Date/time planned event	NOT USED
4	3	IS	O		Event reason code	NOT USED
5	60	XCN	O		Operator ID	NOT USED
6	26	TS	O		Event occurred	NOT USED

PID – Patient Identification Segment

The PID segment is used by the VP HL7 interface for receiving patient identification information. This segment contains permanent patient identifying and demographic information that, for the most part, is not likely to change frequently.

The Patient ID is expected in PID-3. Only if PID-3 is empty the patient ID is assumed to be in PID-2.

A sample PID segment:

PID|1234567890111111|000011|123456789011|ULTRASOUND^P1^APPLE||19700101|M

SEQ	LEN	DT	OPT	RP/#	ELEMENT NAME	USAGE
1	4	SI	O		Set ID - Patient ID	NOT USED
2	20	CX	O		Patient ID (External ID)	Patient ID
3	20	CX	R		Patient ID (Internal ID)	Patient ID
4	20	CX	O	Y	Alternate Patient ID - PID	NOT USED
5	48	XPN	O	Y	Patient Name	Patient Name
6	48	XPN	O		Mother's Maiden Name	Patient's Maiden Name
7	26	TS	O		Date/Time of Birth	DOB
8	1	IS	O		Sex	Patient Sex
9	48	XPN	O	Y	Patient Alias	NOT USED
10	1	IS	O		Race	NOT USED
11	106	XAD	O	Y	Patient Address	Address/City/State/Zip/Country
12	4	IS	B		County Code	NOT USED
13	40	XTN	O	Y	Phone Number - Home	Private Phone

HL7 Segment & Field Definitions

MSH - message header segment

The MSH segment defines the intent, source, destination, and some specifics of the syntax of a message. This information is used only for HL7 definitions and is not used specifically for any field(s) within the GE ViewPoint application. This segment is required.

SEQ	LEN	DT	OPT	RP/#	ELEMENT NAME	USAGE
1	1	ST	R		Field Separator	
2	4	ST	R		Encoding Characters	^~\&
3	180	HD	O		Sending Application	GE
4	180	HD	O		Sending Facility	ViewPoint
5	180	HD	O		Receiving Application	Name of HL7 destination as configured in VPAdmin

PID – Patient Identification Segment

The PID segment is used by the VP HL7 interface for receiving patient identification information. This segment contains permanent patient identifying and demographic information that, for the most part, is not likely to change frequently.

SEQ	LEN	DT	OPT	RP/#	ELEMENT NAME	USAGE
1	4	SI	O		Set ID - Patient ID	NOT USED

P	Preadmit	vorstationär
R	Recurring patient	nachstationär
T		teilstationär

ORC – Common Order Segment

The Common Order segment (ORC) is used to transmit fields that are common to all orders. The ORC segment is used specifically by ViewPoint to communicate back to the HIS receiving system that generated the original order in the first place. This segment is optional and is non-repeating. Note: the customer must have purchased the "Order Management module" within ViewPoint for this segment to be available as an export. In addition, customer must follow the correct procedures to assign orders to examinations. Please refer to your ViewPoint user manual.

SEQ	LEN	DT	OPT	RP/#	SEQ	USAGE

OBR – Observation Request Segment

The Observation Request (OBR) segment is used to transmit information specific to an order for a diagnostic study or observation, physical exam, or assessment. For ViewPoint, this single order corresponds to a single examination (or to a single pregnancy in case of FetaDoc). This segment is required and is non-repeating.

If the exam is not assigned to an order, than most of the fields of this segment remain empty. All those fields are marked with an asterisk (*).

The following table describes the possible values for the fields 2 to 6.

Content	Value Type	Observation Value
Report text of an examination or pregnancy	ST NM	Flat Result Text separated by line breaks \br\ which designate "new line".

FT1 – Financial Transaction Server

The FT1 segment contains the detail data necessary to post charges, payments, adjustments, etc. to patient accounting records. This segment is optional and repeating, where the number of repeating segments is dependent upon the number of "other codes" selected in the ViewPoint application, pertaining to a single exam. Please refer to your ViewPoint user manual.

PR1– Procedures segment

The PR1 segment contains information relative to various types of procedures that can be performed on a patient. The PR1 segment is used to send multiple procedures, for example, for medical records encoding or for billing systems. This segment is optional and repeating, where the number of repeating segments is dependent upon the number of "cpt codes" selected in the ViewPoint application, pertaining to a single exam. Please refer to your ViewPoint user manual.

SEQ	LEN	DT	OPT	RP/ #	ELEMENT NAME	USAGE
1	4	SI	R		Set ID – PR1	Set ID - PR1
2	2	IS	B		Procedure Coding Method	Coding method (only in DFT^VP1 and DFT^VP2 events)

15	80	CE	O		Associated Diagnosis Code	NOT USED
19	250	EI	C		Procedure Identifier	19-1:Unique ID for the Procedure 19-2: Unique ID for the sending entity (see note 2)
20	1	ID	C		Procedure Action Code	Procedure Action Code: A - Add U - Update D - Delete (see note 2)

Note 1:

For the French version of ViewPoint, the format of PR1-3 is as follows:

CCAMCode_Thera^CCAMCode_Thera_activity^CCAMCode_Thera_phase^CCAMCode_Thera_modif

Note 2:

Fields 19 and 20 are present only in a BAR^P12 message. To assure the uniqueness of DG1-20/PR1-19, the following format was implemented:

<Key1>[E|O|P]<Key2><Short description>^<Product description><Installation UID>

Where:

Key1:	unique number to refer an examination, perinatal or outcome.
E:	the diagnosis or procedure refers to an examination
O:	the diagnosis or procedure refers to an outcome
P:	the diagnosis or procedure refers to an perinatal
Key2:	Unique number to refer a diagnosis or procedure
Short description:	Short acronym to identify the diagnosis or procedure
Product description:	Short description about the ViewPoint product
Installation UID:	Unique number generated to identify a ViewPoint installation

Example:

301E1023MP^FDB_DE_DE000078369517633.1140527628 : Main procedure nr. 1023 belonging to examination nr. 301. Generated by an FDB_DE VPHisCom Server with Installation UID 000078369517633.1140527628.

203O188OD^FDB_DE_DE000078369517633.1140527628: Other diagnosis nr. 188 belonging to outcome nr. 203. Generated by an FDB_DE VPHisCom Server with Installation UID 000078369517633.1140527628.

34P221MP^FDB_DE_DE000078369517633.1140527628: Main procedure nr. 221 belonging to perinatal nr. 34. Generated by an FDB_DE VPHisCom Server with Installation UID 000078369517633.1140527628.

If there is only one ViewPoint product in the system, the sub field 20-1 is enough to univocally identify a diagnosis/procedure.

DG1 – Diagnosis segment

The DG1 segment contains patient diagnosis information of various types, for example, admitting, primary, etc. The DG1 segment is used to send multiple diagnosis (for example, for medical records encoding). This segment is optional and repeating, where the number of repeating segments is dependent upon the number of "icd9 codes" selected in the ViewPoint application, pertaining to a single exam. Please refer to your ViewPoint user manual.

Product description:	Short description about the ViewPoint product
Installation UID:	Unique number generated to identify a ViewPoint installation

Example:

301E1023MP^FDB_DE_DE000078369517633.1140527628 : Main procedure nr. 1023 belonging to examination nr. 301. Generated by an FDB_DE VPHisCom Server with Installation UID 000078369517633.1140527628.

203O188OD^FDB_DE_DE000078369517633.1140527628: Other diagnosis nr. 188 belonging to outcome nr. 203. Generated by an FDB_DE VPHisCom Server with Installation UID 000078369517633.1140527628.

34P221MP^FDB_DE_DE000078369517633.1140527628: Main procedure nr. 221 belonging to perinatal nr. 34. Generated by an FDB_DE VPHisCom Server with Installation UID 000078369517633.1140527628.

If there is only one ViewPoint product in the system, the sub field 20-1 is enough to univocally identify a diagnosis/procedure.

TXA - transcription document header segment

The TXA segment contains information specific to a transcribed document but does not include the text of the document. The message is created as a result of a document status change. This information is used to update other healthcare systems to identify reports that are available in the transcription system. By maintaining the TXA message information in these systems, the information is available when constructing queries to the transcription system requesting the full document text.

A sample TXA segment:

```
TXA|26|DR||20060829102922|Dr. Albert^Dr.  
Fried|||20060829174903998|pia|||26||9999|4||DO

22	250	PPN	C	Y	Authentication Person(s)	Only if 'Document Completion Status' is set to 'AU', (otherwise field will be empty): Operator or Sonographer name. The names are transferred completely in the second component of the field (Family Name <FN>). Repetitions are used to transfer the different persons: 1. Operator 1 (US Version: Sonographer) 2. Operator 2 (US Version: Physician) 3. Risk Assessment Operator
23	250	XCN	O	Y	Distributed Copies (Code and Name of Recipients)	Not Used

MSA – Message acknowledgement segment

The MSA segment contains acknowledge information.

SEQ	LEN	DT	OPT	RP/#	ELEMENT NAME	USAGE
1	2	ID	R		Acknowledgment Code	Acknowledgment Code: AA: accepted AE: error
2	20	ST	R		Message Control ID	Message Control ID
3	80	ST	O		Text Message	Error message if any
4	15	NM	O		Expected Sequence Number	NOT USED
5	1	ID	B		Delayed Acknowledgment Type	NOT USED
6	250	CE	O		Error Condition	NOT USED

OBX - observation/result segment

The OBX segment is used to transmit a single observation or observation fragment. It represents the smallest indivisible unit of a report. Its structure is summarized in Figure 7-5.

The following map applies to OBX segment only when used inside a MDM event

SEQ	LEN	DT	OPT	RP/#	ELEMENT NAME	ViewPoint value
1	4	SI	O		Set ID - OBX	1
2	2	ID	C		Value Type	ST (String)
3	250	CE	R		Observation Identifier	Generated by VphiscomServer. In MDM^T02 events, this field contains the string 'IMAGE_REF'
4	20	ST	C		Observation Sub-ID	Not Used
5	655	*	C	Y ²	Observation Value	UNC path to the PDF file to export.
6	250	CE	O		Units	Not Used
7	60	ST	O		References Range	Not Used
8	5	IS	O	Y/5	Abnormal Flags	Not Used
9	5	NM	O		Probability	Not Used
10	2	ID	O	Y	Nature of Abnormal Test	Not Used

¹ The length of the observation field is variable, depending upon value type. See *OBX-2 value type*.

² May repeat for multipart, single answer results with appropriate data types, e.g., CE, TX, and FT data types.

SEQ	LEN	DT	OPT	RP/#	ELEMENT NAME	ViewPoint value
11	1	ID	R		Observation Result Status	P=Preliminary, F=Final, U=Update to Final C=Corrected
12	26	TS	O		Date Last Observation Normal Value	Not Used
13	20	ST	O		User Defined Access Checks	Not Used
14	26	TS	O		Date/Time of the Observation	Not Used
15	250	CE	O		Producer's ID	Not Used
16	250	XCN	O	Y	Responsible Observer	Not Used
17	250	CE	O	Y	Observation Method	Not Used
18	22	EI	O	Y	Equipment Instance Identifier	Not Used
19	26	TS	O		Date/Time of the Analysis	Not Used

ZVP – ViewPoint specific segment

The ZVP segment is used specifically by ViewPoint to communicate exam related information and the doctors/observers (resources) involved with the specified exam. This segment is required and is non-repeating.

SEQ	LEN	DT	OPT	RP/#	ELEMENT NAME	USAGE
1	10	SI	O		SET ID – ZVP	SET ID – ZVP ^ ID of exam ^ record state
2	26	TS	R		Date / Time of the observation	Exam date/time (YYYYMMDDHHmmss)
3	-	-	-		Date / Time of end of observation	End of exam date/time (YYYYMMDDHHmmss), only for German USEndo
4	60	XCN	O		Ordered by code	Ordered by code
5	60	XCN	O		Performed by code	Performed by code
6	60	XCN	O		Responsible observer	Sonographer (operator 1)
7	60	XCN	O		Attending doctor	Physician (operator 2)
8	30	ST	O		HL7ExamType	Examination type (USEndo only)
9	60	XCN	O		Ordered by facility name	Facility name (Ordered by)
10	60	XCN	O		Performed by facility name	Facility name (Performed by) User^Department^Computer Name which generated the message
11	48	PPN	R		Message origin	Assistant
12	60	XCN	O		Assistant	Assistant

ZOX – Pregnancy information (non-standard segment)

The ZOX segment is used specifically by ViewPoint to communicate pregnancy related information. This segment is non-repeating.

SEQ	LEN	DT	OPT	RP/#	ELEMENT NAME	USAGE
1	32	SI	R	N	Index	Fixed to '1'
5						
5.1	32	NM	O	N	Gravida	Gravida
5.2	32	NM	O	N	Para	Para
5.5	8	NM	O	N	LMP	Last menstrual period Estimate date of delivery. (according with ultrasound examination, if present, otherwise according with LMP)
5.6	8	DT	O	N	EDD_US	Estimate date of delivery. (according with ultrasound examination, if present, otherwise according with LMP)
5.7	32	NM	O	N	Case number	Episode number

ZEX – Additional examination information (non-standard segment)*

The ZEX segment is used specifically by ViewPoint to communicate additional examination information. This segment is non-repeating.

SEQ	LEN	DT	OPT	RP/#	ELEMENT NAME	USAGE
1	32	SI	R	N	Index	Fixed to '1'
2

8.5	64	ST	O	N	Clinic	Clinic
8.6	64	ST	O	N	Town	Town
8.7	64	ST	O	N	Email	Email
8.8	64	ST	O	N	Communication provider	Communication provider

The Segment ZEX is not available in ViewPoint installation by default. In order to allow ViewPoint to add the ZEX segment as part of the exam related outbound HL7 events, the following formula must be added to the file user_formula.dat, under user directory:

```
[HL7UseExamZSegment]
/calc="1";
```

This action will override the default implementation of HL7UseExamZSegment present in common_formula.dat, which returns 0 by default.

ZPE – Additional perinatal information (non-standard segment)*

The ZPE segment is used specifically by ViewPoint to communicate additional perinatal information. This segment is non-repeating.

SEQ	LEN	DT	OPT	RP/#	ELEMENT NAME	USAGE
1	32	SI	R	N	Index	Fixed to '1'
2						
2.1	512	ST	O	N	Locker user	Locker user long name.(User who locked the exam, if any)
2.2	512	ST	C	N	Computer name	Locker user's computer name. Conditioned to 2.1
3						
3.1	32	NM	O	N	perinatal id	Perinatal.@id
3.2	8	NM	O	N	Patient visit Estimated time	perinatal.KlinikLiegendauer
3.3	8	NM	O	N	Patien visit time	perinatal. MutterAufenthalt

The Segment ZPE is not available in ViewPoint installation by default. In order to allow ViewPoint to add the ZPE segment as part of the perinatal related outbound HL7 events, the following formula must be added to the file user_formula.dat, under user directory:

```
[HL7UsePerinatalZSegment]
/calc="1";
```

This action will override the default implementation of HL7UsePerinatalZSegment present in common_formula.dat, which returns 0 by default.

Export of discrete findings

The ViewPoint HL7 interface offers the possibility to export finding values in an ORU^R01 HL7 event, where each finding value is transmitted in a separate OBX segment. The values exported depend on the different ViewPoint flavors and are described in the table below.

Most of the values are coded according with the LOINC code system. However, some ViewPoint specific finding are not classified as LOINC topic, and, therefore, are exported with a proprietary identifier. The corresponding coding system for each finding value is also transmitted to the hospital information system as described in HL7 standard in OBX-3.3.
